LOGICK:

R Or, The RIGHT USE of Haplands

REASON

From IN THE

Enquiry after TRUTH,

WITH

A Variety of Rules to guard against Error, in the Affairs of Religion and Human Life, as well as in the Sciences.

By I SAAC WATTS.

The SECOND EDITION, Corrected.

LONDON:

Printed for John Clark and Richard Hett, at the Bible and Crown in the Poultry near Cheapside, Emanuel Matthews, at the Bible in Pater-noster-Row, and Richard Ford, at the Angel in the Poultry near Stocks-Market.

MDCCXXVI.

ć

Sir John Hartopp, Bart.

SIR,

T is fit the Publick should receive thro' your Hands what was written originally for the Assistance of your younger Studies, and was then presented to you.

It was by the repeated Importunities of our Learned Friend Mr. John Eames, that I was persuaded to revise these Rudiments of Logic; and when I had once suffered my self to begin the Work, I was drawn still onward far beyond my first Design, even to the Neglect, or too long Delay of other pressing and important Demands that were upon me.

It has been my Endeavour to form every Part of this Treatise both for the A 2 Instruc-

DEDICATION.

Instruction of Students, to open their Way into the Sciences, and for the more extensive and general Service of Mankind, that the Gentleman and the Christian might find their Account in the Perusal as well as the Scholar. I have therefore collected and proposed the chief Principles and Rules of right Judgment in Matters of common and facred Importance, and pointed out our most frequent Mistakes and Prejudices in the Concerns of Life and Religion, that we might better guard against the Springs of Error, Guilt and Sorrow, which surround us in every Stage of Mortality.

You know, Sir, the great Design of this noble Science is to rescue our reasoning Powers from their unhappy Slavery and Darkness; and thus with all due Submission and Deserence it offers a humble Assistance to divine Revelation. Its chief Business is to relieve the natural Weaknesses of the Mind by some better Efforts of Nature; it is to dis-

fuse

DEDICATION.

fuse a Light over the Understanding in our Enquiries after Truth, and not to furnish the Tongue with Debate and Controversy. True Logic is not that noisy Thing that deals all in Dispute and Wrangling, to which former Ages had debased and confined it; yet its Disciples must acknowledge also, that they are taught to vindicate and defend the Truth, as well as to search it out. True Logic doth not require a long Detail of hard Words to amuse Mankind, and to puff up the Mind with empty Sounds, and a Pride of false Learning; yet some Distinctions and Terms of Art are necessary to range every Idea in its proper Class, and to keep our Thoughts from Confusion. The World is now grown so wise as not to suffer this valuable Art to be engrost by the Schools. In so polite and knowing an Age, every Man of Reason will covet some Acquaintance with Logic, since it tenders its daily Service to Wisdom and Virtue, and to the Affairs of common Life as well as to the Sciences. I will

DEDICATION.

I will not prefume, Sir, that this little Book is improved fince its first Composure, in Proportion to the Improvements of your manly Age. But when you shall please to review it in your retir'd Hours, perhaps you may refresh your own Memory in some of the early Parts of Learning: And if you find all the additional Remarks and Rules made so familiar to you already by your own Observation, that there is nothing new among them, it will be no unpleasing Reflection that you have so far anticipated the present Zeal and Labour of,

S I R,

Your most faithful and

obedient Servant,

London Ang. 245

I. WATTS.

LOGICK:

11

OR,

The right Use of REASON.

The INTRODUCTION and general SCHEME.

OGICK is the Art of using Reason well in our Enquiries after Truth, and the Communication of it to others.

Reason is the Glory of human Nature, and one of the chief Eminences whereby we are raised above our fellow Creatures the Brutes in this lower World.

Reason, as to the Power and Principle of it, is the common Gift of God to all Men; tho' all are not favoured with it by Nature in an equal Degree: But the acquired Improvements of it in different Men, make a much greater Distinction between them than Nature had made. I could even venture to say, that the Improvement of Reason hath raised the Learned and the Prudent in the European World, almost as much above the Hottentots and other Savages of Africa, as those Savages are by Nature superior to the Birds, the Beasts, and the Fishes.

Now the Design of Logick is to teach us the right Use of our Reason; or Intellectual Powers, and the Improvement of them in our selves and others; this is not only necessary in order to at-

tain any competent Knowledge in the Sciences, or the Affairs of Learning, but to govern both the greater and the meaner Actions of Life. It is the Cultivation of our Reason by which we are better enabled to distinguish Good from Evil, as well as Truth from Falshood: And both these are Matters of the highest Importance, whether we re-

gard this Life, or the Life to come.

The Pursuit and Acquisition of Truth is of infinite Concernment to Mankind. Hereby we become acquainted with the Nature of Things both in Heaven and Earth, and their various Relations to each other. It is by this means we discover our Duty to God and our fellow-Creatures: By this we arrive at the Knowledge of natural Religion, and learn to confirm our Faith in divine Revelation, as well as to understand what is revealed. Our Wisdom, Prudence and Piety, our present Conduct and our future Hope, are all influenced by the Use of our reasoning Powers in the Search after Truth.

There are several Things that make it very necessary that our Reason should have some Assistance in the Exercise or Use of it.

The first is, the Depth and Difficulty of many Truths, and the Weakness of our Reason to see far into Things at once, and penetrate to the Bottom of them. It was a Saying among the Antients, Veritas in Puteo, Truth lyes in a Well: and to carry on this Metaphor we may very justly say, that Logick does, as it were, supply us with Steps whereby we may go down to reach the Water; or it frames the Links of a Chain whereby we may draw the Water up from the Bottom. Thus, by the Means of many Reasonings well connected together, Philosophers in our Age have drawn a thousand Truths out of the Depths of Darkness,

ness, which our Fathers were utterly unacquainted with.

Another Thing that makes it necessary for our Reason to have some Assistance given it, is the Disquise and false Colours in which many Things appear to us in this present imperfect State: There are a thousand Things which are not in reality what they appear to be, and that both in the natural and the moral World: So the Sun appears to be flat as a Plate of Silver, and to be less than twelve Inches in Diameter; the Moon appears to be as big as the Sun, and the Rainbow appears to be a large substantial Arch in the Sky; all which are in reality gross Falshoods. So Knavery puts on the Face of Justice, Hypocrify and Superstition wear the Vizard of Piety, Deceit and Evil are often clothed in the Shapes and Appearances of Truth and Goodness. Now Logick helps us to strip off the outward Disguise of Things, and to behold them and judge of them in their own Nature.

Besides, our reasoning Powers need some Assistance, because they are so frail and fallible in the present State; we are imposed upon at home as well as abroad; we are deceived by our Senses, by our Imaginations, by our Passions and Appetites; by the Authority of Men, by Education and Custom, &c. and we are led into frequent Errors, by judging according to these false and flattering Principles, rather than according to the Nature of Things. Something of this Frailty is owing to our very Constitution, Man being compounded of Flesh and Spirit: Something of it arises from our infant State, and our growing up by slow Degrees to Manhood, so that we form a thousand Judgments before our Reason is mature. But there is still more of it owing to our original Defection from God, and the foolish and evil Dispositions

fitions that are found in fallen Man: So that one great Part of the Design of Logick is to guard us against the delusive Influences of our meaner Powers, to cure the Mistakes of immature Judgment, and to raise us in some Measure from the Ruins of our Fall.

It is evident enough from all these Things, that our Reason needs the Assistance of Art in our Enquiries after Truth or Duty; and without some Skill and Diligence in forming our Judgments aright, we shall be led into frequent Mistakes, both in Matters of Science, and in Matters of Practice, and some of these Mistakes may prove satal too.

and some of these Mistakes may prove fatal too. The Art of Logick, even as it assists us to gain the Knowledge of the Sciences, leads us on toward Virtue and Happiness; for all our speculative Acquaintance with Things should be made subservient to our better Condust in the civil and the religious Life. This is infinitely more valuable than all Speculations, and a wise Man will use them chiefly for this better Purpose.

All the good Judgment and Prudence that any Man exerts in his common Concerns of Life, without the Advantages of Learning, is called natural Logick: And it is but a higher Advancement, and a farther Affistance of our rational Powers that is designed by and expected from this

artificial Logick.

In order to attain this, we must enquire what are the principal Operations of the Mind, which are put forth in the Exercise of our Reason: And we shall find them to be these four, (viz.) Perception, Judgment, Argumentation, and Disposition.

Now the Art of Logick is compos'd of those Obfervations and Rules, which Men have made about these four Operations of the Mind, Perception, Judgment, Reasoning, and Disposition, in order to affilt and improve them.

I. Per-

- I. Perception, Conception, or Apprehension, is the meer simple Contemplation of Things offered to our Minds, without affirming or denying any Thing concerning them. So we conceive or think of a Horse, a Tree, High, Swift, Slow, Animal, Time, Motion, Matter, Mind, Life, Death, &c. The Form under which these Things appear to the Mind, or the Result of our Conception or Apprehension, is call'd an Idea.
- II. Judgment is that Operation of the Mind, whereby we join two or more Ideas together by one Affirmation or Negation, that is, we either affirm or deny this to be that. So This Tree is high; That Horse is not swift; The Mind of Man is a thinking Being; Meer Matter has no Thought belonging to it; God is just; Good Men are often miserable in this World; A righteous Governor will make a Difference betwint the Evil and the Good; which Sentences are the Effect of Judgment, and are called Propositions.
- III. Argumentation or Reasoning is that Operation of the Mind, whereby we infer one Thing, i.e. one Proposition, from two or more Propositions premised. Or it is the drawing a Conclusion, which before was either unknown, or dark, or doubtful, from some Propositions which are more known and evident. So when we have judged that Matter cannot think, and that the Mind of Man doth think, we then infer and conclude, that therefore the Mind of Man is not Matter.

So we judge that A just Governor will make a Difference betwint the Evil and the Good; we judge also, that God is a just Governor; and from thence we conclude, that God will make a Difference be-

twixt the Evil and the Good.

This

This Argumentation may be carried on further, thus, God will one time or another make a Difference between the Good and the Evil: But there is little or no Difference made in this World; Therefore there must be another World wherein this Difference shall be made.

These Inferences or Conclusions are the Effects of Reasoning, and the three Propositions taken altogether are called a Syllogism, or Argument.

IV. Disposition is that Operation of the Mind, whereby we put the Ideas, Propositions, and Arguments, which we have formed concerning one Subject, into such an Order as is sittest to gain the clearest Knowledge of it, to retain it longest, and to explain it to others in the best manner: Or, in short, it is the Ranging of our Thoughts in such Order, as is best for our own and others Conception and Memory. The Effect of this Operation is called Method. This very Description of the four Operations of the Mind and their Effects in this Order, is an Instance or Example of Method.

Now as the Art of Logick affifts our Conception, so it gives us a large and comprehensive View of the Subjects we enquire into, as well as a clear and distinct Knowledge of them. As it regulates our fudgment and our Reasoning, so it secures us from Mistakes, and gives us a true and certain Knowledge of Things; and as it surnishes us with Method, so it makes our Knowledge of Things both easy and regular, and guards our Thoughts from Consusion.

Logick is divided into four Parts, according to these four Operations of the Mind, which it directs, and therefore we shall treat of it in this Order.

THE

THE

First PART

OF

LOGICK.

Of Perceptions and Ideas.

HE first Part of Logick contains Observations and Precepts about the first Operation of the Mind, Perception or Conception: And since all our Knowledge, how wide and large soever it grow, is founded upon our Conceptions and Ideas, here we shall consider,

1. The general Nature of them.

2. The Objects of our Conception, or the Archetypes or Patterns of these Ideas.

3. The several Divisions of them.

4. The Words and Terms whereby our Ideas are exprest.

5. General Directions about our Ideas.

6. Special Rules to direct our Conceptions.

CHAP:

CHAP. I.

Of the Nature of Ideas.

FIRST, the Nature of Conception or Perception * shall just be mention'd, tho' this may feem to belong to another Science rather than

Logick.

Perception is that Act of the Mind (or as some Philosophers call it, rather a Passion or Impression) whereby the Mind becomes conscious of any Thing, as when I see a Hunger, Thirst, or Cold, or Heat; when I see a Horse, a Tree, or a Man; when I hear a human Voice, or Thunder, I am conscious of these Things, and this is called Perception. If I study, meditate, wish or fear, I am conscious of these inward Acts also, and my Mind perceives its own Thoughts, Wishes, Fears, &c.

An Idea is generally defin'd a Representation of a Thing in the Mind; it is a Representation of something that we have feen, felt, heard, &c. or been conscious of. That Notion or Form of a Horse, a Tree, or a Man which is in the Mind, is called the Idea of a Horse, a Tree, or a Man. That Notion of Hunger, Cold, Sound, Colour, Thought, or Wish, or Fear, which is in the Mind, is call'd the Idea of Hunger, Cold, Sound,

Wift, &c.

It is not the outward Object, or Thing which is perceived, (viz.) the Horse, the Man, &c. nor

Note, The Words Conception and Perception are often used promissionally as I have done here, because I would not embarrals a Learner with too many Distinctions; but if I were to distinguish them, I would say, Perception is the Consciousness of an Object when present: Conception is the sorming an Idea of the Object, whether present or absent.

is it the very Perception or Sense, and Feeling, (viz.) of Hunger, or Cold, &c. which is called the I-dea; but it is the Thing as it exists in the Mind by Way of Conception or Representation, that is properly called the Idea, whether the Object be prefent or absent.

As a Horse, a Man, a Tree, are the outward Objects of our Perception, and the outward Archetypes or Patterns of our Ideas; so our own Sensations of Hunger, Cold, &c. are also inward Archetypes, or Patterns of our Ideas: But the Notions or Pictures of these Things, as they are considered, or conceived in the Mind, are precisely the Ideas that we have to do with in Logick. To see a Horse, or to seel Cold, is one Thing; to think of, and converse about a Man, a Horse, Hunger, or Cold, is another.

Among all these *Ideas*, such as represent *Bodies*, are generally call'd *Images*, especially if the Idea of the Shape be included. Those inward Representations which we have of *Spirit*, *Thought*, *Love*, *Hatred*, *Cause*, *Effect*, &c. are more *pure* and *mental Ideas*, belonging more especially to the Mind, and carry nothing of Shape or Sense in them. But I shall have occasion to speak more particularly of the *Original* and the *Distinction of Ideas* in the third Chapter. I proceed therefore now to consider the *Objetts* of our *Ideas*.

C H A P. II. Of the Objects of Perception.

SECT. I.

Of Being in general.

THE Object of Perception is that which is represented in the Idea, that which is the Archetype or Pattern, according to which the Idea is form'd; and thus Judgments, Propositions, Reasonings, and long Discourses, may all become the Objects of Perception; but in this Place we speak chiefly of the first and more simple Objects of it, before they are join'd and form'd into Propositions or Discourses.

Every Object of our Ideas is call'd a Theme, whether it be a Being or Not Being; for Not Being may be propos'd to our Thoughts, as well as that which has a real Being. But let us first treat of Beings, and that in the largest Extent of the Word.

A Being is confider'd as possible, or as attual.

When it is consider'd as possible, it is said to have an Essence or Nature; such were all Things before their Creation: When it is consider'd as actual, then it is said to have Existence also; such are all Things which are created, and God himself the Creator.

Essence therefore is but the very Nature of any Being, whether it be actually existing or no. A Rose in Winter has an Essence, in Summer it has Existence also.

Note, There is but one Being which includes Existence in the very Essence of it, and that is God, who therefore actually exists by natural and eternal Necessity: But the actual Existence of every Creature is very distinct from its Essence, for

it may be, or may not be, as God please.

Again, Every Being is consider'd either as sub-sisting in and by its self, and then it is call'd a Substance; or it subsists in and by another, and then it is call'd a Mode or Manner of Being. Tho' few Writers allow Mode to be call'd a Being in the same perfect Sense as a Substance is; and some Modes have evidently more of real Entity or Being than others, as will appear when we come to treat of them. These Things will furnish us with Matter for larger Discourse in the following Sections.

SECT. II.

Of Substances and their various Kinds.

Substance is a Being which can substift by itself, without Dependence upon any other created Being. The Notion of substitute by itself gives occasion to Logicians to call it a Substance. So a Horse, a House, Wood, Stone, Water, Fire, a Spirit, a Body, an Angel are called Substances, because they depend on nothing but God for their Existence.

It has been usual also in the Description of Substance to add, it is that which is the Subject of Modes or Accidents; a Body is the Substance or Subject, its Shape is the Mode.

But lest we be led into Mistakes, let us here take Notice that when a Substance is said to substance without Dependence upon another created Being, all that we mean is, that it cannot be annihilated,

or utterly destroyed and reduced to nothing, by any Power inferior to that of our Creator; tho' its present particular Form, Nature and Properties may be altered and destroyed by many inferior Causes: a Horse may dye and turn to Dust; Wood may be turned into Fire, Smoke and Albes; a House into Rubbish, and Water into Ice or Vapour; but the Matter of which they are made still remains, tho' the Forms and Shapes of it are alter'd. A Body may cease to be a House or a Horse, but it is a Body still; and in this Sense it depends only upon God for its Existence.

Among Substances some are thinking or conscious Beings, or have a Power of Thought, such as the Mind of Man, God, Angels. Some are extended and folid or impenetrable, that is, they have Dimensions of Length, Breadth, and Depth, and have a Power of Refistance, or exclude every Thing of the same kind from being in the same Place. This is the proper Character of Matter

or Body.

As for the Idea of Space, whether it be void or full, i. e. a Vacuum or a Plenum, whether it be interspers'd among all Bodies, or may be suppos'd to reach beyond the Bounds of the Creation, it is an Argument too long and too hard to be difputed in this Place what the Nature of it is; whether it be a real Substance, or a meer Conception of the Mind, whether it be the Immenfity of the Divine Nature, or the meer Order of co-existent Beings, whether it be the manner of our Conception of the Distances of Bodies, or a meer Nothing.

Now if we seclude Space out of our Consideration, there will remain but two forts of Substances in the World, i. e. Matter and Mind, or s we otherwise call them, Body and Spirit; at least, we have no Ideas of any other Substance but these *.

Among Substances, some are called Simple, some are Compound, whether the Words be taken

in a philosophical or a vulgar Sense.

Simple Substances, in a philosophical Sense, are either Spirits which have no manner of Composition in them, and in this Sense God is called a simple Being; or they are the first Principles of Bodies, which are usually called Elements, of which all other Bodies are compounded: Elements are such Substances as cannot be resolved, or reduced, into two or more Substances of different Kinds.

The

* Because Men have different Ideas or Notions of Substance, I thought it not proper entirely to omit all Account of them, and therefore have

thrown them into the Margin.

Some Philosophers suppose that our Acquaintance with Matter or Mi.d. reaches no farther than the meer Properties of them, and that there is a fort of unknown Being, which is the Substance or the Subject by which these Properties of folid Extension, and of Cogitation are supported, and in which these Properties inhere or exist. But perhaps this Notion arises only from our turning the meer logical Notion of Substance or Self-substituting into the Notion of a distinct physical or natural Being, without any Necessity. Solid Extension seems to me to be the very Substance of Matter, or of all Bodies and a Power of thinking, which is always in act, seems to be the very Substance of all Spirits; for God himself is an intelligent, almighty Power; nor is there any need to seek for any other secret and unknown Being, or abstracted Substance entirely distinct from these, in order to support the several Modes or Properties of Matter or Mind, for these two Ideas are sufficient for that Purpose; therefore these are Substances.

It must be consest, when we say, Spirit is a thinking Substance, and Matter is an extended solid Substance, we are sometimes ready to imagine that Extension and Solidity are but meer Modes and Properties of a certain unknown Substance or Subject which supports them, and which we call Body; and that Consciousness, and a Power of Thinking, are but meer Modes and Properties of some unknown Substance or Subject which supports them also, and which we call Spirit: But I rather think this to be a meer Mistake, which we are led into by the grammatical Form and Use of Words; and our logical Way of thinking by Substances and Modes, as well as our grammatical Way of talking by Substantives and Adjectives, delude us into this

Supposition.

However, that I may not be wanting to any of my Readers, I would let them know Mr. Lock's Opinion, which has obtain'd much in the prefent Age, and it is this: "That our Idea of any particular Subftance, is only such a Combination of simple Ideas as represents that thing as sub-

The various Sects of Philosophers have attributed the Honour of this Name to various Things. The Peripateticks, or Followers of Aristotle, made Fire, Air, Earth and Water to be the four Elements, of which all earthly Things were compounded; and they suppos'd the Heavens to be a Quintessence, or fifth fort of Body, distinct from all these: But, fince experimental Philosophy and Mathematicks have been better understood, this Doctrine has been abundantly refuted. The Chymists make Spirit, Salt, Sulphur, Water and Earth to be their five Elements, because they can reduce all terrestrial Things to these five: This feems to come nearer the Truth; tho' they are not all agreed in this Enumeration of Elements. In short, our modern Philosophers generally suppose Matter or Body to be one simple Principle, or folid Extension, which being diversified by its various Shapes, Quantities, Motions

" fisting by itself, in which the suppos'd or consused Idea of Substance (such as it is) is always ready to offer itself. It it a Conjunction of Ideas co-existing in such a Cause of their Union, as makes the whole Subject subsist by itself, though the Cause of their Union be unknown; and our segmental Idea of Substance arises from the Self-subsistence of this Collection of Ideas.

Now if this Notion of Substance rest here, and be consider'd meerly as an unknown Cause of the Union of Properties, it is much more easy to be admitted: But if we proceed to suppose a fort of real, substantial, distinct Being, different from solid Quantity or Extension in Bodies, and different from a Power of thinking in Spirits, in my Opinion it is the Introduction of a needless scholastical Notion into the real Nature of Things, and then

fancying it to have a real Existence.

Mr. Lock in his Essay of Hum. Und. Book II. Ch. 22. §. 2. seems to ridicule this common Idea of Substance, which Men have generally supposed to be a fort of Substance distinct from all Properties what-soever, and to be the Support of all Properties. Yet in Book IV. Ch. 3. §. 6. he seems to suppose there may be some such unknown Substance, which may be capable of receiving the Properties both of Matter and of Mind (viz.) Extension, Solidity, and Cogitation; for he supposes it possible for God to add Cogitation to that Substance which is corporeal, and thus to cause Matter to think. If this be true, then Spirits (for ought we know) may be corporeal Beings or thinking Bedies, which is a Doctrine too favourable to the Mortality of the Soul. But I leave these Debates to the Philosophers of the Age.

and Situations, makes all the Varieties that are found in the Universe; and therefore they make little use of the Word *Element*.

Compound Substances are made up of two or more simple Substances: So every Thing in this whole material Creation, that can be reduced by the Art of Man into two or more different Principles or Substances, is a compound Body in the

philosophical Sense.

But if we take the Words Simple and Compound in a vulgar Sense, then all those are simple Substances which are generally esteem'd uniform in their Natures. So every Herb is call'd a simple; and every Metal and Mineral; tho' the Chymist perhaps may find all his several Elements in each of them. So a Needle is a simple Body, being made only of Steel; but a Sword or a Knife is a compound, because its Hast or Handle is made of Materials different from the Blade. So the Bark of Peru, or the Juice of Sorrel is a simple Medicine: But when the Apothecaries Art has mingled several Simples together, it becomes a Compound, as Diascordium or Mithridate.

The Terms of pure and mixt, when applied to Bodies, are much akin to fimple and compound. So a Guinea is pure Gold, if it has nothing but Gold in it, without any Alloy or baser Metal: But if any other Mineral or Metal be mingled with it,

it is call'd a mixt Substance, or Body.

Substances are also divided into animate and inanimate. Animated Substances are either animal or vegetable*.

^{*} Note, Vegetables as well as Animals have gotten the Name of animated Substances, because some of the Ancients supposed Herbs and Plants, Beagis and Birds, &c. to have a fort of Souls distinct from Matter or Body.

Part I.

Some of the animated Substances have various organical or instrumental Parts, fitted for a Variety of Motions from Place to Place, and a Spring of Life within themselves, as Beasts, Birds, Fishes, and Insects; these are call'd Animals. Other animated Substances are call'd Vegetables, which have within themselves the Principles of another sort of Life and Growth, and of various Productions, such as we see in Plants, Herbs, and Trees.

And there are other Substances, which are call'd inanimate, because they have no fort of Life in

them, as Earth, Stone, Air, Water, &c.

There is also one fort of Substance, or Being, which is compounded of Body and Mind, or a rational Spirit united to an Animal; such is Mankind. Angels, or any other Beings of the spiritual and invisible World, who have assum'd visible Shapes for a Season, can hardly be reckon'd among this Order of compounded Beings; because they drop their Bodies, and divest themselves of those visible Shapes, when their particular Message is perform'd, and thereby shew that these Bodies do not belong to their Natures.

SECT. III.

Of Modes and their various Kinds, and first of essential and accidental Modes.

HE next fort of Objects which are reprefented in our Ideas, are call'd Modes, or Manners of Being *.

^{*} Note, The Term Mode is by some Authors applied chiefly to the Relations or relative Manners of Being. But in logical Treatises it is often used in a larger Sense, and extends to all Attributes whatsoever, and includes the most effential and inward Properties, as well as outward Respects and Relations, and reaches to Assistant themselves as well as Manners of Action.

A Mode is that which cannot subsist in and of itself, but is always esteem'd as belonging to, and subsisting by, the Help of some Substance, which, for that Reason, is call'd its Subject. A Mode must depend on that Substance for its very Existence and Being; and that not as a Being depends on its Cause, (for so Substances themselves depend on God their Creator;) but the very Being of a Mode depends on some Substance for its Subject, in which it is, or to which it belongs; so Motion, Shape, Quantity, Weight, are Modes of Body; Knowledge, Wit, Folly, Love, Doubting, Judging, are Modes of the Mind; for the one cannot subsist without Body, and the other cannot subsist without Mind.

Modes have their several Divisions, as well as

Substances.

I. Modes are either effential, or accidental.

An essential Mode, or Attribute, is that which belongs to the very Nature or Essence of the Subject wherein it is; and the Subject can never have the same Nature without it; such is Roundness in a Bowl, Hardness in a Stone, Softness in Water, vital Motion in an Animal, Solidity in Matter, Thinking in a Spirit; for tho' that piece of Wood which is now a Bowl may be made square, yet if Roundness be taken away, it is no longer a Bowl: So that very Flesh and Bones, which is now an Animal, may be without Life or inward Motion; but if all Motion be entirely gone, it is no longer an Animal, but a Carcass: So if a Body, or Matter, be divested of Solidity, it is a meer void Space or Nothing; and if Spirit be entirely without Thinking, I have no Idea of any thing that is left in it, therefore so far as I am able to judge, Consciousness must be its essential Attribute:

tribute*: Thus all the Perfections of God are call'd his Attributes, for he cannot be without them.

An essential Mode is either primary or secondary. A primary essential Mode is the first, or chief Thing, that constitutes any Being in its particular Effence, or Nature, and makes it to be that which it is, and distinguishes it from all other Beings: This is call'd the Difference in the Definition of Things, of which hereafter: So Roundness is the primary essential Mode, or Difference of a Bowl; the meeting of two Lines is the primary essential Mode, or the Difference of an Angle; the Perpendicularity of these Lines to each other is the Difference of a right Angle: Solid Extension is the pri-mary Attribute, or Difference of Matter: Consciousness, or at least a Power of Thinking, is the Difference, or primary Attribute of a Spirit *; and to fear and love God is the primary Attribute of a pious Man.

A secondary essential Mode is any other Attribute of a Thing, which is not of primary Consideration: This is call'd a Property: Sometimes indeed it goes toward making up the Essence, especially of a complex Being, so far as we are acquainted with it; sometimes it depends upon, and follows from the Essence of it; so Volubility, or Aptness to roul, is the Property of a Bowl, and is derived from its Roundness. Mobility, and Figure or Shape, are Properties of Matter; and it is the Property of a pious Man to love his Neigh-

bour.

An accidental Mode, or an Accident, is such a Mode, as is not necessary to the Being of a Thing,

^{*}Note, When I call folid Extension an essential Mode or Attribute of Matter, and a Power of Thinking an essential Mode or Attribute of a Spirit, I do it in compliance with common Forms of Speech: But perhaps in reality these are the very Essences or Substances themselves, and the most substantial Ideas that we can frame of Body and Spirit.

for the Subject may be without it, and yet remain of the same Nature that it was before; or it is that Mode which may be separated or abolisht from its Subject; so Smoothness or Roughness, Blackness or Whiteness, Motion or Rest, are the Accidents of a Bowl; for these may be all chang'd, and yet the Body remain a Bowl still: Learning, Justice, Folly, Sickness, Health, are the Accidents of a Man: Motion, Squareness, or any particular Shape or Size, are the Accidents of Body: Yet Shape and Size in general are effential Modes of it; for a Body must have some Size and Shape, nor can it be without them: So Hope, Fear, Wishing, Affenting, and Doubting, are Accidents of the Mind, tho' Thinking in general feems to be effential to it.

Here observe, that the Name of Accident has been oftentimes given by the old peripatetick Philosophers to all Modes, whether essential or accidental; but the Moderns confine this Word Accident to the Sense in which I have described it.

Here it should be noted also, that the 'the Word Property be limited sometimes in logical Treatises to the secondary essential Mode, yet it is us'd in common Language to signify these four sorts of Modes; of which some are essential, and some accidental.

kind, but not only to those Subjects. So yellow Colour and Ductility are Properties of Gold; they belong to all Gold, but not only to Gold; for Saffron is also yellow, and Lead is ductile.

(2.) Such as belong only to one kind of Subject, but not to every Subject of that kind. So Learning, Reading, and Writing, are Properties of human Nature; they belong only to Man, but not to all Men.

(3.) Such as belong to every Subject of one kind, and only to them, but not always. So Speech or Language is a Property of Man, for it belongs to all Men, and to Men only; but Men

are not always speaking.

(4.) Such as belong to every Subject of one Kind, and to them only and always. So Shape and Divisibility are Properties of Body; so Omnificience and Omnipotence are Properties of the divine Nature, for in this Sense Properties and Attributes are the same, and except in logical Treatises there is scarce any Distinction made between them. These are call'd Propria quarto modo in the Schools, or Properties of the fourth Sort.

Note, Where there is any one Property or efsential Attribute so superior to the rest, that it appears plainly that all the rest are deriv'd from it, and such as is sufficient to give a full Distinction of that Subject from all other Subjects, this Attribute, or Property, is call'd the effential Difference, as is before declared; and we commonly fay, the Essence of the Thing consists in it; so the Essence of Matter in general seems to consist in Solidity, or folid Extension. But for the most part, we are so much at a Loss in finding out the intimate Essence of particular natural Bodies, that we are forced to distinguish the essential Difference of most Things by a Combination of Properties. So a Sparrow is a Bird, which has such colour'd Feathers, and fuch a particular Size, Shape, and Motion. So Wormwood is a Herb, which has such a Leaf of such a Colour, and Shape, and Tafte, and fuch a Root and Stalk. So Beafts and Fishes, Minerals, Metals, and Works of Art fometimes, as well as of Nature, are diftinguished by such a Collection of Properties.

SECT. IV.

The farther Divisions of Mode.

II. THE second Division of Modes is into absolute and relative. An absolute Mode is that which belongs to its Subject, without Respect to any other Beings whatsoever: But a relative Mode is derived from the Regard that one Being has to others. So Roundness and Smoothness are the absolute Modes of a Bowl; for if there were nothing else existing in the whole Creation, a Bowl might be round and smooth: But Greatness and Smallness are relative Modes; for the very Ideas of them are derived meerly from the Comparison of one Being with others: a Bowl of four Inches Diameter is very great, compar'd with one of an Inch and half; but it is very small in Comparison of another Bowl, whose Diameter is eighteen or twenty Inches. Motion is the absolute Mode of a Body, but Swiftings or Slowness are relative Ideas; for the Motion of a Bowl on a Bowling-Green is swift, when compared with a Snail; and it is flow, when compar'd with a Cannon-Bullet.

These relative Modes are largely treated of by some logical and metaphysical Writers under the Name of Relation; And these Relations themselves are farther subdivided into such as arise from the Nature of Things, and such as arise meerly from the Operation of our Minds; one sort are called real Relations, the other mental; so the Likeness of one Egg to another is a real Relation, because it arises from the real Nature of Things; for whether there was any Man or Mind to conceive it or no, one Egg would be like another:

But when we consider an Egg as a Noun Substantive in Grammar, or as signified by the Letters e, g, g, these are meer mental Relations, and derive their very Nature from the Mind of Man. These sort of Relations are call'd by the Schools Entia Rationis, or second Notions, which have no real Being, but by the Operation of the Mind.

- they are either intrinsical or extrinsical. Intrinsical Modes are conceived to be in the Subject or Substance, as when we say a Globe is round, or swift, rolling, or at rest: Or when we say a Man is tall, or learned, these are intrinsick Modes: But extrinsick Modes are such as arise from something that is not in the Subject or Substance it self; but it is a manner of Being, which some Substances attain by Reason of something that is external or foreign to the Subject; as, This Globe lies within two Yards of the Wall; or this Man is beloved or hated. Note, Such sort of Modes, as this last Example, are call'd external Denominations.
- IV. There is a fourth Division much akin to this, whereby Modes are said to be Inherent or Adherent, that is, Proper or Improper. Adherent or improper Modes arise from the joining of some accidental Substance to the chief Subject, which yet may be separated from it; so when a Bowl is wet, or a Boy is clothed, these are adherent Modes; for the Water and the Cloaths are distinct Substances which adhere to the Bowl, or to the Boy: But when we say, the Bowl is swift or round; when we say, the Boy is strong or witty, these are proper or inherent Modes, for they have a fort of Inheing in the Substance it self, and don't arise

C. II. S. 4. The right Use of Reason. 23 rise from the Addition of any other Substance to it.

V. Action and Passion are Modes or Manners which belong to Substances, and should not entirely be omitted here. When a Smith with a Hammer strikes a piece of Iron, the Hammer and the Smith are both Agents, or Subjects of Action; the one is the Prime or Supreme, the other the Subordinate: The Iron is the Patient, or the Subject of Passion, in a philosophical Sense, because it receives the Operation of the Agent: Tho' this Sense of the Words Passion and Patient differs much from the vulgar Meaning of them *.

VI. The fixth Division of Modes may be into Physical; i. e. Natural, Civil, Moral, and Supernatural. So when we consider the Apostle Paul, who was a little Man, a Roman by the Privilege of his Birth, a Man of Virtue or Honesty, and an inspir'd Apostle; his low Stature is a physical Mode, his being a Roman is a civil Privilege, his Honesty is a moral Consideration, and his being inspired is supernatural.

VII. Modes belong either to Body or to Spirit, or to both. Modes of Body belong only to Matter or to corporeal Beings; and these are Shape, Size, Situation or Place, &c. Modes of Spirit belong only to Minds; such are Knowledge, Assent, Dissent, Doubting, Reasoning, &c. Modes which belong to both have been sometimes call'd

^{*} Note, Agent fignifies the Doer, Patient the Sufferer, Action is Doing, Passion is Suffering. Agent and Action have retain'd their original and philosophical Sense, the Passion and Passion have acquired a very different meaning in common Language.

mixt Modes, and these are only found in human Nature, which is compounded both of Body and Spirit; such are Sensation, Imagination, Passion, &c. in all which there is a Concurrence of the Operations both of Mind and Body, i. e. of ani-

mal and intellectual Nature. But the Modes of Body may be yet farther diftinguish'd. Some of them are primary Modes or, Qualities, for they belong to Bodies consider'd in themselves, whether there were any Man to take Notice of them or no; such are those beforemention'd (viz.) Shape, Size, Situation, &c. Secondary Qualities, or Modes, are such Ideas as we ascribe to Bodies on account of the various Impressions which are made on the Senses of Men by them; and these are call'd sensible Qualities, which are very numerous; fuch are all Colours, as Red, Green, Blue, &c. such are all Sounds, as Sharp, Shrill, Loud, Hoarse; all Tastes, as Sweet, Bitter, Sour; all Smells, whether Pleasant, Offensive, or Indifferent; and all Tattile Qualities, or fuch as affect the Touch or Feeling (viz.) Heat, These are properly call'd secondary Cold, &c. Qualities, for tho' we are ready to conceive them as existing in the very Bodies themselves which affect our Senses, yet true Philosophy has most undeniably prov'd that all these are really various Ideas or Perceptions excited in human Nature, by the different Impressions that Bodies make upon our Senses by their primary Modes, i. e. by Means of the different Shape, Size, Motion and Position of those little invisible Parts that compose them. Thence it follows that a secondary Quality confider'd as in the Bodies themselves, is nothing else but a Power or Aptitude to produce fuch Sensations in us. See Locke's Essay of the Understanding, Book 2. Ch. 8.

VIII. I

VIII. I might add in the last Place, that as Modes belong to Substances, so there are some also that are but Modes of other Modes: For the they substance, as the original Subject of them, yet they are properly and directly attributed to some Mode of that Substance. Motion is the Mode of a Body; but the Swistness, or Slowness of it, or its Direction to the North or South, are but Modes of Motion. Walking is the Mode or Manner of Man, or of a Beast; but Walking gracefully implies a Manner or Mode superadded to that Action. All comparative and superlative Degrees of any Quality, are the Modes of a Mode, as Swister implies a greater Measure of Swistness.

It would be too tedious here to run thro' all the Modes, Accidents, and Relations at large that belong to various Beings, and are copiously treated of in general, in the Science call'd Metaphy-ficks, or more properly, Ontology: They are also treated of in particular in those Sciences which have assumed them severally as their proper Sub-

jects.

SECT. V.

Of the ten Categories. Of Substance modify'd,

E have thus given an Account of the two chief Objects of our Ideas (viz.) Substances and Modes, and their various Kinds: And in these last Sections we have briefly comprized the greatest part of what is necessary in the famous ten Ranks of Being, call'd the ten Predicaments or Categories of Aristotle, on which there are endless Volumes of Discourses formed by several of his

his Followers: But that the Reader may not utterly be ignorant of them, let him know the
Names are these: Substance, Quantity, Quality,
Relation, Action, Passion, Where, When, Situation and Cloathing. It would be meer Loss of
Time to shew how loose, how injudicious, and
even ridiculous, is this ten-fold Division of Things:
And whatsoever farther relates to them, and
which may tend to improve useful Knowledge,
should be sought in Ontology and in other Sciences.

Besides Substance and Mode, some of the Moderns would have us consider the Substance modified, as a distinct Object of our Ideas; but I think there is no more that need be said on this Subject, than this, (viz.) There is some Difference between a Substance when it is consider'd with all its Modes about it, and cloath'd in all its Manners of Existence, or when it is distinguish'd from them, and consider'd naked without them.

SECT. VI.

Of Not-Being.

S Being is divided into Substance and Mode, fo we may consider Not-Being with Regard to both these.

I. Not-Being is confider'd as excluding all Subflance, and then all Modes are also necessarily excluded, and this we call pure Nihility, or meer Nothing.

This Nothing is taken either in a vulgar or a philosophical Sense; so we say there is nothing in the Cup, in a vulgar Sense, when we mean there is no Liquor in it; but we cannot say there is nothing

in the Cup, in a strict philosophical Sense, while there is Air in it, and perhaps a Million of Rays of Light are there.

II. Not-Being, as it has relation to Modes or Manners of Being, may be consider'd either as a

meer Negation, or as a Privation.

A Negation is the Absence of that which does not naturally belong to the Thing we are speaking of, or which has no Right, Obligation, or Necessity to be present with it, as when we say a Stone is Inanimate, or Blind, or Deaf, i. e. it has no Life, nor Sight, or Hearing; or when we say a Carpenter or a Fisherman is unlearned; these are meer Negations.

But a Privation is the Absence of what does naturally belong to the Thing we are speaking of, or which ought to be present with it, as when a Man, or a Horse is deaf, or blind, or dead, or if a Physician or a Divine be unlearned, these are call'd Privations: So the Sinfulness of any human Attion is said to be a Privation, for Sin is that want of Conformity to the Law of God, which

ought to be found in every Action of Man.

Note, There are some Writers who make all sort of relative Modes or Relations, as well as all external Denominations to be meer Creatures of the Mind, and entia Rationis, and then they rank them also under the general Head of Not-Beings; but it is my Opinion, that whatsoever may be determin'd concerning meer mental Relations and external Denominations, which seem to have something less of Entity or Being in them, yet there are many real Relations, which ought not to be reduc'd to so low a Class; such are the Situation of Bodies, their mutual Distances, their particular Proportions and Measures, the Notions of Fatherbood,

therbood, Brotherbood, Sonship, &c. all which are relative Ideas. The very Essence of Virtue or Holiness consists in the Conformity of our Actions to the Rule of Right Reason, or the Law of God; The Nature and Essence of Sincerity is the Conformity of our Words and Actions to our Thoughts, all which are but meer Relations; and I think we must not reduce such positive Beings as Piety, and Virtue, and Truth, to the Rank of Non-Entities, which have nothing real in them, tho' Sin (or rather the Sinfulness of an Action) may be properly call'd a Not-being, for it is a want of Piety and Virtue. This is the most usual and perhaps the justest Way of representing these Matters.

CHAP. III.

Of the several Sorts of Perceptions or Ideas.

DEAS may be divided with Regard to their Original, their Nature, their Objects and their Qualities.

SECT. I.

Of sensible, spiritual, and abstracted Ideas.

about the Origin of Ideas, (viz.) whether any of our Ideas are innate or no, i. e. born with us, and naturally belonging to our Minds. Mr. Locke utterly denies it; others as positively affirm it. Now, though this Controversy may be compromised, by allowing that there is a Sense, wherein our first Ideas of some Things may be said to be innate, yet it does not belong

to this Place and Business to have that Point debated at large, nor will it hinder our Pursuit of the present Work to passit over in Silence.

There is sufficient Ground to say, that all our

Ideas, with Regard to their Original, may be divided into fensible, spiritual, and abstracted I-

deas.

Sensible or corporeal Ideas are deriv'd originally from our Senses, and from the Communication which the Soul has with the animal Body in this present State; such are the Notions we frame of all Colours, Sounds, Tastes, Figures, or Shapes and Motions; for our Senses being conversant about particular sensible Objects become the Occasions of several distinct Perceptions in the Mind; and thus we come by the Ideas of Yellow, White, Heat, Cold, Soft, Hard, Bitter, Sweet, and all those which we call sensible Qualities. All the Ideas which we have of Body, and the several Modes and Properties that belong to it, seem to be deriv'd from Sensation.

And howfoever these may be treasured up in the Memory, and by the Work of Fancy may be increas'd, diminish'd, compounded, divided, and diversified, (which we are ready to call our Invention) yet they all derive their first Nature and Being from something that has been let into our Minds by one or other of our Senses. If I think of a golden Mountain, or a Sea of liquid Fire, yet the single Ideas of Sea, Fire, Mountain, and Gold came into my Thoughts at first by Sensation; the Mind has only compounded them.

* Spiritual or intellectual Ideas are those which we gain by reflecting on the Nature and Actions

^{*} Note, Here the Word Spiritual is used in a meer natural, and not in a zeligious Sense.

of our own Souls, and turning our Thoughts within our selves, and observing what is transacted in our own Minds. Such are the Ideas we have of Thought, Assent, Dissent, Judging, Reason, Knowledge, Understanding, Will, Love, Fear, Hope.

By Sensation the Soul contemplates Things (as it were) out of it self, and gains corporeal Representations or sensible Ideas: By Restection the Soul contemplates it self, and Things within it self, and by this Means it gains spiritual Ideas, or Repre-

sentations of Things intellectual.

Here it may be noted, that tho' the first Original of these two forts of Ideas, (viz.) Sensible and Spiritual, may be entirely owing to these two Principles, Sensation and Reslection, yet the Recollection and fresh Excitation of them may be owing to a thousand other Occasions and Occurrences of Life. We could never inform a Man who was born Blind or Deaf, what we mean by the Words Yellow, Blue, Red, or by the Words Loud or Shrill, nor convey any just Ideas of these Things to his Mind, by all the Powers of Language, unless he has experienc'd those Sensations of Sound and Colour; nor could we ever gain the Ideas of Thought, Judgment, Reason, Doubting, Hoping, &c. by all the Words that Man could invent, without turning our Thoughts inward upon the Actions of our own Souls. Yet when once we have attain'd these Ideas by Sensation and Reflection, they may be excited afresh by the Use of Names, Words, Signs, or by any thing else that has been connected with them in our Thoughts; for when two or more Ideas have been affociated together, whether it be by Cuftom, or Accident, or Design, the one presently brings the other to Mind. Besides Besides these two which we have nam'd, there is a third sort of Ideas, which are commonly call'd abstracted Ideas, because the original Ground or Occasion of them may be Sensation, or Respection, or both, yet these Ideas are fram'd by another Act of the Mind which we usually eall Abstraction. Now the Word Abstraction signifies a withdrawing some Parts of an Idea from other Parts of it, by which Means such abstracted Ideas are form'd, as neither represent any Thing corporeal nor spiritual, i. e. any thing peculiar or proper to Mind or Body. Now these are of two kinds.

Some of these abstracted Ideas are the most absolute, general and universal Conceptions of Things
consider'd in themselves, without Respect to others, such as Entity or Being, and Not-being, Essence, Existence, Act, Power, Substance, Mode, Accident, &c.

The other fort of abstracted Ideas is relative, as when we compare several Things together, and consider meerly the Relations of one Thing to another, entirely dropping the Subjects of those Relations, whether they be corporeal or spiritual; such are our Ideas of Cause, Effect, Likeness, Unlikeness, Subject, Object, Identity, or Sameness, and Contrariety, Order, and other Things which are treated of in Ontology.

Most of the Terms of Art in several Sciences may be rank'd under this Head of abstracted Ideas, as Noun, Pronoun, Verb, in Grammar, and the several Particles of Speech, as wherefore, therefore, when, how, altho', howsoever, &c. So Connections, Transitions, Similitudes, Tropes, and their various Forms in Rhetorick.

These abstracted Ideas, whether absolute or relative, cannot so properly be said to derive their immediate,

immediate, compleat and distinct Original, either from Sensation or Reslection: (1.) Because the Nature and the Actions both of Body or Spirit give us Occasion to frame exactly the same Ideas of Essence, Mode, Cause, Effect, Likeness, Contrariety, &c. Therefore these cannot be call'd either sensible or spiritual Ideas, for they are not exact Representations either of the peculiar Qualities or Actions of Spirit or Body, but seem to be a distinct kind of Idea fram'd in the Mind, to represent our most general Conceptions of Things or their Relations to one another, without any Regard to their Natures, whether they be corporeal or spiritual. And (2.) the same general Ideas of Caule and Effett, Likeness, &c. may be transferr'd to a thousand other kinds of Being, whether bodily or spiritual, besides those from whence we first deriv'd them: Even those abstracted Ideas, which might be first occasion'd by Bodies, may be as properly afterward attributed to Spirits.

Now, tho' Mr. Locke supposes Sensation and Reflection to be the two only Springs of all Ideas, and that these two are sufficient to furnish our Minds with all that rich Variety of Ideas which we have; yet Abstraction is certainly a different Act of the Mind, whence these abstracted Ideas have their Original; tho' perhaps Sensation or Reflection may furnish us with all the first Objects and Occasions whence these abstracted Ideas are excited and deriv'd. Nor in this Sense and View of Things can I think Mr. Locke himself would deny my Representation of the Original of abstracted Ideas, nor forbid them to stand for a

distinct Species.

SECT. II.

Of simple and complex, compound and collective Ideas.

IDEAS consider'd in their Nature, are either simple or complex.

A fimple Idea, is one uniform Idea which cannot be divided or diftinguish'd by the Mind of Man into two or more Ideas; fuch are a Multitude of our Sensations, as the Idea of Sweet, Bitter, Cold, Heat, White, Red, Blue, Hard, Soft, Motion, Rest, and perhaps, Extension and Duration: Such are also many of our spiritual Ideas; such as Thought, Will, Wish, Knowledge, &c.

A complex Idea is made by joining two or more simple Ideas together, as a Square, a Triangle, a Cube, a Pen, a Table, Reading, Writing, Truth, Falshood, a Body, a Man, a Horse, an Angel, a heavy Body, a swift Horse, &c. Every Thing that can be divided by the Mind into two or more

Ideas is call'd complex.

Complex Ideas are often consider'd as fingle and distinct Beings, tho' they may be made up of several simple Ideas; so a Body, a Spirit, a House, a Tree, a Flower. But when several of these Ideas of a different Kind are join'd together, which are wont to be consider'd as distinct single Beings, this is call'd a compounded Idea, whether these united Ideas be fimple or complex. So a Man is compounded of Body and Spirit, so Mithridate is a compound Medicine, because it is made of many different Ingredients: This I have shewn under the Doctrine of Substances. And Modes also may be compounded; Harmony is a compound Idea, made up of different Sounds united; so several different Virtues must be united to make up the compounded compounded Idea or Character, either of a Hero,

or a Saint.

But when many Ideas of the fame Kind are join'd together and united in one Name, or under one View, it is call'd a collective Idea; so an Army, or a Parliament, is a Collection of Men; a Dictionary or Nomenclatura is a Collection of Words; a Flock is a Collection of Sheep, a Forest, or Grove, a Collection of Trees; a Heap is a Collection of Sand, or Corn, or Dust, &c. a City is a Collection of Houses; a Nosegay is a Collection of Flowers; a Month, or a Year, is a Collection of Days, and a Thousand is a Collection of Units.

The precise Difference between a compound and collective Idea is this, that a compound Idea unites Things of a different Kind, but a collective Idea Things of the same Kind: the this Distinction in some Cases is not accurately observed, and Custom oftentimes uses the Word Compound for Collective.

SECT. III.

Of universal and particular Ideas, real and imaginary.

DEAS, according to their Objects, may first be divided into particular or universal.

A particular Idea is that which represents one

Thing only.

Sometimes the one Thing is represented in a loose and indeterminate manner, as when we say, some Man, any Man, one Man, another Man; some Horse, any Horse; one City, or another, which is call'd by the Schools Individuum Vagum.

Sometimes the particular Idea represents one Thing in a determinate manner, and then it is call'd

call'd a fingular Idea; such is Bucephalus or Alexander's Horse, Cicero the Orator, Peter the Apostle, the Palace of Versailles, this Book, that River, the new Forest, or the City of London: That Idea which represents one particular determinate Thing to me is call'd a singular Idea; whether it be simple, or complex, or compound.

The Object of any particular Idea, as well as the Idea it felf, is sometimes call'd an Individual: So Peter is an individual Man, London is an individual City. So this Book, one Horse, another Horse, are all Individuals; tho' the Word Individual is more usually limited to one singular, certain, and

determined Object.

An universal Idea is that which represents a common Nature agreeing to several particular Things; so a Horse, a Man, or a Book, are call'd universal Ideas, because they agree to all Horses,

Men, or Books.

And I think it is not amiss to intimate, in this Place, that these universal Ideas are form'd by that Act of the Mind which is call'd Abstraction, i. e. a withdrawing some part of an Idea from other Parts of it: For when singular Ideas are first let into the Mind by Sensation or Resections then, in order to make them universal; we leave out, or drop, all those peculiar and determinate Characters, Qualities, Modes, or Circumstances, which belong meerly to any particular individual Being, and by which it differs from other Beings; and we only contemplate those Properties of it; wherein it agrees with other Beings.

Tho' it must be consels'd, that the Name of abstracted Ideas is sometimes attributed to univer-sal Ideas, both scassible and spiritual, yet this Abstraction is not so great, as when we drop out of our Idea every sensible or spiritual Representations

D 2

and retain nothing but the most general and abfolute Conceptions of Things, or their meer Relations to one another, without any Regard to their particular Natures, whether they be fensible or spiritual. And it is to this kind of Conceptions we more properly give the Name of abstracted Ideas as in the first Section of this Chapter.

An universal Idea is either general or special.

A general Idea is call'd by the Schools a Genus; and it is one common Nature agreeing to feveral other common Natures. So Animal is a Genus, because it agrees to Horse, Lion, Whale, Butterfly, which are also common Ideas; so Fish is a Genus, because it agrees to Trout, Herring, Crab, which are common Natures also.

A special Idea is call'd by the Schools, a Species; it is one common Nature that agrees to several fingular or individual Beings; fo Horse is a special Idea, or a Species, because it agrees to Bucephalus, Trott and Snow-ball. City is a special I-dea, for it agrees to London, Paris, Bristol.

Note, Ist, Some of these Universals are Genus's, if compar'd with less common Natures; and they are Species's, if compar'd with Natures more com-So Bird is a Genus, if compar'd with Eagle, Sparrow, Raven, which are also common Natures: But it is a Species, if compar'd with the more general Nature, Animal. The same may be said of Fish, Beast, &c.

This fort of univerfal Ideas, which may either be consider'd as a Genus, or a Species, is call'd Subaltern: But the highest Genus, which is never à Species, is call'd the most general; and the lowest Species, which is never a Genus, is call'd the

most special.

Note, IIdly, In universal Ideas it is proper to consider their Comprehension and their Extension *.

The Comprehension of an Idea regards all the essential Modes and Properties of it: So Body in its Comprehension takes in Solidity, Figure, Quantity, Mobility, &c. So a Bowl in its Comprehen-

sion includes Roundness, Volubility, &c.

The Extension of an universal Idea regards all the particular Kinds and single Beings that are contain'd under it. So a Body in its Extension includes Sun, Moon, Star, Wood, Iron, Plant, Animal, &c. which are several Species, or Individuals, under the general Name of Body. So a Bowl, in its Extension, includes a wooden Bowl, a brass Bowl, a white and a black Bowl, a heavy Bowl, &c. and all Kinds of Bowls, together with all the particular individual Bowls in the World.

Note, The Comprehension of an Idea is sometimes taken in so large a Sense, as not only to include the essential Attributes, but all the Properties, Modes and Relations what soever, that belong

to any Being, as will appear Chap. VI.

This Account of Genus and Species is part of that famous Doctrine of Universals, which is taught in the Schools, with diverse other Formalities belonging to it; for it is in this Place that they introduce Difference, which is the primary essential Mode, and Property or the secondary essential Mode, and Accident or the accidental Mode; and these they call the five Predicables, because every thing that is affirm'd concerning any Being, must be either the Genus, the Species, the Difference, some Property, or some Accident: But what

^{*} Note, The Word Extension here is taken in a meer logical Sense, and not in a physical and mathematical Sense.

farther is necessary to be said concerning these Things, will be mention'd when we treat of De-

finition.

Having finish'd the Doctrine of universal and particular Ideas, I should take Notice of another Division of them, which also hath Respect to their Objects; and that is, they are either real or

imaginary.

Real Ideas are such as have a just Foundation in Nature, and have real Objects, or Exemplars, which did, or do, or may actually exist, according to the present State and Nature of Things; such are all our Ideas of Long, Broad, Swift, Blow, Wood, Iron, Men, Horses, Thoughts, Spirits, à cruel Master, a proud Beggar, a Man se-

ven Foot high.

Imaginary Ideas, which are also call'd fantastical, or chimerical, are such as are made by enlarging, diminishing, uniting, dividing real Ideas in the Mind, in such a manner, as no Objects, or Exemplars, did or will ever exist, according to the present course of Nature, tho' the several Parts of these Ideas are borrowed from real Objects; such are the Conceptions we have of a Centaur, a Satyr, a golden Mountain, a flying Horfe, a Dog without a Head, a Bull less than a Mouse, or a Mouse as big as a Bull, and a Man twenty Foot high.

Some of these fantastic Ideas are Possible, that is, they are not utterly inconsistent in the Nature of Things; and therefore it is within the Reach of Divine Power to make such Objects; fuch are most of the Instances already given: But Impossibles carry an utter Inconsistence in the Ideas which are join'd; such are self-active Matter, and institute of eternal Men, a pious Man with-

out Honesty, or Heaven without Holiness.

SECT.

SECT. IV.

The Division of Ideas, with Regard to their Qualities.

Deas, with Regard to their Qualities, afford us these several Divisions of them. 1. They are either clear and distinct, or obscure and confused.

2. They are vulgar or learned. 3. They are perfect or impersect. 4. They are true or false.

1. Our Ideas are either clear and distinct, or ob-

scure and confused.

Ideas from those that are distinguished the clear Ideas from those that are obscure; and it must be acknowledged there may be some Difference between them; for it is the Clearness of Ideas for the most part makes them distinct, and the Obscurity of Ideas is one thing that will always bring a fort of Confusion into them. Yet when these Writers come to talk largely upon this Subject, and to explain and adjust their Meaning with great Nicety, I have generally found that they did not keep up the Distinction they first designed, but they confound the one with the other. I shall therefore treat of clear or distinct Ideas, as one and the same sort, and obscure, or confused Ideas, as another.

A clear and distinct Idea is that which represents the Object to the Mind with full Evidence and Strength, and plainly distinguishes it from all o-

ther Objects whatloever.

An obscure and confused Idea represents the Object either so faintly, so imperfectly, or so mingled with other Ideas, that the Object of it doth not appear plain to the Mind, nor purely in its

D 4 own

own Nature, nor sufficiently distinguish'd from

other Things.

When we see the Sea and Sky nearer at Hand, we have a clear and distinct Idea of each; but when we look far towards the Horizon, especially in a misty Day, our Ideas of both are but obscure and confused; for we know not which is Sea and which is Sky. So when we look at the Colours of the Rainbow we have a clear Idea of the red; the blue, the green in the middle of their feveral Arches, and a distinct Idea too, while the Eye fixes there; but when we confider the Border of those Colours, they so run into one another that renders their Ideas confused and obscure. So the Idea which we have of our Brother, or our Friend, whom we fee daily, is clear and difinet; but when the Absence of many Years has injured the Idea, it becomes obscure and confused.

Note here, that some of our Ideas may be very clear and distinct in one Respect, and very obfeure and confused in another. So when we speak of a Chiliagonum, or a Figure of a thousand Angles, we may have a clear and distinct rational Idea of the Number one thousand Angles, for we can demonstrate various Properties concerning it by Reason: But the Image, or sensible Idea, which we have of the Figure, is but confused and obscure; for we cannot precisely distinguish it by Fancy from the Image of a Figure that has nine hundred Angles or nine hundred and ninety. So when we speak of the infinite Divisibility of Matter, we always keep in our Minds a very clear and diffinct Idea of Division and Divisibility: But after we have made a little Progress in dividing, and come to Parts that are far too finall for the reach of our Senses, then our Ideas, or sensible Images of these little Bodies, become obscure and indistinct, and the

C. III. S. 4. The right Use of Reason. 41 the Idea of Infinite is very obscure, imperfect and

confused.

II. Ideas are either vulgar or learned. A vulgar Idea represents to us the most obvious and sensible Appearances that are contain'd in the Object of them: But a learned Idea penetrates farther into the Nature, Properties, Reasons, Causes and Effects of things. This is best illustrated by some

Examples.

It is a vulgar Idea that we have of a Rainbow, when we conceive a large Arch in the Clouds made up of various Colours parallel to each other: But it is a learned Idea which a Philosopher has, when he considers it as the various Resections and Refractions of Sun-Beams, in Drops of falling Rain. So it is a vulgar Idea which we have of the Colours of folid Bodies, when we per-ceive them to be, as it were, a red, or blue, or green Tincture of the Surface of those Bodies: But it is a philosophical Idea, when we consider the various Colours to be nothing else but different Sensations excited in us by the variously refracted Rays of Light, reflected on our Eyes in a different Manner, according to the different Shape, or Situation of the Particles of which the Surfaces of those Bodies are compos'd. It is a vulgar Idea which we have of a Watch or Clock, when we conceive of it as a pretty Instrument, made to shew us the Hour of the Day: But it is a learned Idea which the Watch-Maker has of it, who knows all the feveral Parts of it, the Spring, the Balance, the Chain, the Wheels, their Axles, &c. together with the various Connections and Adjustments of each Part, whence the exact and uniform Motion of the Index is deriv'd, which points to the Minute or the Hour. So when a common common Understanding reads Virgil's Æneid, he has but a vulgar Idea of that Poem, yet his Mind is naturally entertain'd with the Story, and his Ears with the Verse: But when a Critick, or a Man who has Skill in Poesy, reads it, he has a learned Idea of its peculiar Beauties, he tastes and relishes a superior Pleasure; he admires the Roman Poet, and wishes he had known the Christian Theology, which would have furnish'd him with nobler Materials and Machines than all the Heathen Idols.

It is with a vulgar Idea that the World beholds the Cartons of Raphael at Hampton-Court, and every one feels his Share of Pleasure and Entertainment: But a Painter contemplates the Wonders of that Italian Pencil, and sees a thousand Beauties in them, which the vulgar Eye neglected: His learned Ideas give him a transcendent Delight, and yet, at the same time, discover the Blemishes which the common Gazer never observed.

III. Ideas are either perfect or imperfect, which are otherwise call'd adequate or inade-

quate.

Those are adequate Ideas which perfectly represent their Archetypes or Objects. Inadequate 1deas are but a partial, or incompleat Representation of those Archetypes to which they are referr'd.

All our simple Ideas are in some Sense adequate or perfect, because simple Ideas, consider'd meerly as our first Perceptions, have no Parts in them: So we may be said to have a perfect Idea of White, Black, Sweet, Sour, Length, Light, Motion, Rest, &c. We have also a perfect Idea of various Figures, as a Triangle, a Square, a Cylinder.

der, a Cube, a Sphere, which are complex Ideas: But our Idea or Image of a Figure of a thousand Sides, our Idea of the Gity of London, or the Powers of a Loadstone, are very imperfect, as well as all our Ideas of infinite Length or Breadth, infinite Power, Wisdom or Duration; for the Idea of infinite is endless and ever growing, and can never be compleated.

Nôte, 1. When we have a perfect Idea of any thing in all its Parts, it is call'd a compleat Idea; when in all its Properties, it is call'd comprehensive. But when we have but an inadequate and imperfect Idea, we are only said to apprehend it; therefore we use the Term Apprehension, when we speak of our Knowledge of God, who can never be com-

prehended by his Creatures.

Note; 2. Tho' there are a Multitude of Ideas which may be call'd perfect, or adequate in a vulgar Sense, yet there are scarce any Ideas which are adequate, comprehensive and compleat in a philosophical Sense; for there is scarce any thing in the World that we know, as to all the Parts and Powers, and Properties of it in Perfection. Even so plain an Idea as that of a Triangle, has, perhaps, infinite Properties belonging to it, of which we know but a few. Who can tell what are the Shapes and Politions of those Particles, which cause all the Variety of Colours that appear on the Surface of Things? Who knows what are the Figures of the little Corpuscles that compose and diffinguish different Bodies? The Ideas of Brafs, Iron, Gold, Wood, Stone, Hyffop and Rofemary have an infinite Variety of hidden Mysteries contain'd in the Shape, Motion and Polition of the little Particles, of which they are com-pos'd; and, perhaps, also infinite unknown Properties and Powers, that may be deriv'd from them. And And if we arise to the Animal World, or the World of Spirits, our Knowledge of them must be amazingly imperfect, when there is not the least Grain of Sand, or empty Space, but has too many Questions and Difficulties belonging to it for the wisest Philosopher upon Earth to answer and resolve.

IV. Our Ideas are either true or false; for an Idea being the Representation of a thing in the Mind, it must be either a true or a falle Reprefentation of it. If the Idea be conformable to the Object or Archetype of it, it is a true Idea; if not, it is a falle one. So when a Man under the Jaundice sees all things yellow, he has a false Idea of them. So if we see the Sun or Moon, rising or setting, our Idea represents them bigger than when they are on the Meridian: And in this Sense it is a false Idea, because those heavenly Bodies are all Day, and all Night, of the same Bigness. Or when I see a strait Staff appear crooked while it is half under the Water; I say, the Water gives me a false Idea of it. So when I hear a Man use the Words Church and Sacraments, if I understand by these Words, a Congregation of faithful Men, who profess Christianity, and the two Ordinances, Baptism and the Lord's Supper, I have a true Idea of those Words in the common Sense of Protestants: But if the Man who speaks of them be a Papist, he means the Church of Rome and the seven Sacraments, and then I have a mistaken Idea of those Words, as spoken by him, for he has a different Sense and Meaning.

Some think that Truth, or Falshood properly belongs only to Propositions, which shall be the Subject of Discourse in the second Part of Logick; for if we consider Ideas as meer Impressi-

ons upon the Mind, made by outward Objects, those Impressions will ever be conformable to the Laws of Nature in such a Case: The Water will make a Stick appear crooked, and the horizontal Air will make the Sun and Moon appear bigger: And generally where there is Falshood in Ideas, there seems to be some secret or latent Proposition, whereby we judge falfly of Things: This is more obvious where we take up the Words of a Writer or Speaker in a mistaken Sense, for we join his Words to our own Ideas, which are different from his. But after all, fince Ideas are Pictures of Things, it can never be very improper to pronounce them to be true or false, according to their Conformity or Nonconformity to their Exemplars.

CHAP. IV.

Of Words and their several Divisions, together with the Advantage and Danger of them.

SECT. I.

Of Words in general, and their Use.

THO' our Ideas are first acquir'd by the Perception of Objects, or by various Sensations and Reslections, yet we convey them to each other by the Means of certain Sounds, or written Marks, which we call Words; and a great Part of our Knowledge is both obtain'd and communicated by these Means, which are call'd Speech or Language.

But

But as we are led into the Knowledge of Things by Words, so we are oftentimes led into Error, or Mistake, by the Use or Abuse of Words also. And in order to guard against such Mistakes, as well as to promote our Improvement in Knowledge, it is necessary to acquaint our selves a little with Words and Terms. We shall begin with these Observations.

Observ. 1. Words (whether they are spoken or written) have no natural Connection with the Ideas they are design'd to signify, nor with the Things which are represented in those Ideas. There is no manner of Assinity between the Sounds white in English, or blanc in French, and that Conlour which we call by that Name; nor have the Letters, of which these Words are composed, any natural Aptness to signify that Colour rather than red or green. Words and Names therefore are meer arbitrary Signs invented by Men to communicate their Thoughts, or Ideas, to one another.

Observ. 2. If one single Word were appointed to express but one simple Idea, and nothing else, as White, Black, Sweet, Sour, Sharp, Bitter, Extension, Duration, there would be scarce any Mistake about them.

But alas! it is a common Unhappiness in Language, that different simple Ideas are sometimes express'd by the same Word; so the Words sweet and sharp are applied both to the Objects of hearing and tasting, as we shall see hereafter; and this, perhaps, may be one Cause or Foundation of Obscurity and Error arising from Words.

Observ. 3. In communicating our complex I-deas to one another, if we could join as many peculiar and appropriated Words together in one Sound, as we join simple Ideas to make one com-

plex

plex one, we should seldom be in Danger of mistaking: When I express the Taste of an Apple, which we call the Bitter-Sweet, none can mistake what I mean.

Yet this fort of Composition would make all Language a most tedious and unwieldy thing, since most of our Ideas are complex, and many of them have eight or ten simple Ideas in them; so that the Remedy would be worse than the Disease; for what is now express'd in one short Word, as Month, or Year, would require two Lines to express it. It is necessary, therefore, that single Words be invented to express complex Ideas, in order to make Language short and useful.

But here is our great Infelicity, that when fingle Words fignify complex Ideas, one Word can never distinctly manifest all the Parts of a complex Idea, and thereby it will often happen, that one Man includes more or less in his Idea, than another does, while he affixes the same Word to it. In this Case there will be Danger of Mistake between them, for they do not mean the same Object, tho' they use the same Name. So if one Person, or Nation, by the Word Year mean twelve Months of thirty Days each, i. e. three hundred and fixty Days, another intend a Solar Year of three hundred fixty five Days, and a third mean a Lunar Year, or twelve Lunar Months. i. e. three hundred fifty four Days, there will be a great Variation and Error in their Account of Things, unless they are well appriz'd of each other's meaning beforehand. This is suppos'd to be the Reason, why some ancient Histories, and Prophesies, and Accounts of Chronology are so hard to be adjusted. And this is the true Reason of so furious and endless Debates on many Points in Divinity; the Words Church, Worship, Idolatry,

latry, Repentance, Faith, Election, Merit, Grace, and many others which fignify very complex Ideas, are not applied to include just the same simple Ideas, and the same Number of them, by the various contending Parties; thence arise Confusion and Contest.

Observ. 4. Tho' a single Name does not certainly manifest to us all the Parts of a complex I-dea, yet it must be acknowledg'd, that in many of our complex Ideas, the single Name may point out to us some chief Property which belongs to the thing that the Word signifies; especially when the Word, or Name, is trac'd up to its Original thro' several Languages from whence it is borrowed. So an Apostle signifies one who is sent forth.

But this tracing of a Word to its Original (which is call'd Etymology) is sometimes a very precarious and uncertain Thing: And after all, we have made but a little Progress towards the Attainment of the full meaning of a complex I-dea, by knowing some one chief Property of it. We know but a small Part of the Notion of an Apostle, by knowing barely that he is sent forth.

Observ. 5. Many (if not most) of our Words which are applied to moral and intellectual Ideas, when traced up to their Original in the learned Languages, will be found to signify sensible and corporeal Things: Thus the Words Apprehension, Understanding, Abstraction, Invention, Idea, Inference, Prudence, Religion, Church, Adoration, &c. have all a corporeal Signification in their Original. The Name Spirit it self signifies Breath or Air, in Latin, Greek, and Hebrew: Such is the Poverty of all Languages, they are forc'd to

use these Names for incorporeal Ideas, which has

a Tendency to Error and Confusion.

Objects that one Name sometimes signifies: There is almost an infinite Variety of Things and Ideas both simple and complex, beyond all the Words that are invented in any Language; thence it becomes almost necessary that one Name should signify several Things. Let us but consider the two Colours of Tellow and Blue, if they are mingled together in any considerable Proportion they make a Green: Now there may be infinite Differences of the Proportions in the Mixture of Tellow and Blue; and yet we have only these three Words, Tellow, Blue, and Green, to signify all of them, at least by one single Term.

When I use the Word Shore, I may intend thereby a Coast of Land near the Sea, or a Drain to carry off Water, or a Prop to support a Building; and by the Sound of the Word Porter, who can tell whether I mean a Man who bears Burdens, or a Servant who waits at a Nobleman's Gate? The World is fruitful in the Invention of Utensils of Life, and new Characters and Offices of Men, yet Names entirely new are seldom invented; therefore old Names are necessarily us'd to signify new Things, which may occasion much Confusion and Error in the receiving and

communicating of Knowledge.

Give me leave to propose one single Instance, wherein all these Notes shall be remarkably exemplified. It is the Word Bishop, which in French is call'd Evêque; upon which I would make these several Observations. (1.) That there is no natural Connection between the sacred Office hereby signified, and the Letters or Sound which

which fignify this Office; for both these Words, Evêque and Bishop, fignify the same Office, tho there is not one Letter alike in them; nor have the Letters which compose the English or the French Word any thing facred belonging to them, more than the Letters that compose the Words King or Soldier. (2.) If the Meaning of a Word could be learnt by its Derivation or Etymology, yet the original Derivation of Words is oftentimes very dark and unsearchable; for who would imagine that each of these Words are deriv'd from the Latin Episcopus, or the Greek Επίσκοπ .? yet in this Instance we happen to know the true Derivation; the French being anciently writ Evesque, is borrowed from the first part of the Latin Word; and the old English Biscop from the middle of it. (3.) The original Greek Word signifies an Overlooker, or one who stands higher than his Fellows and overlooks them: It is a compound Word, that primarily fignifies sensible Ideas, translated to fignify or include several moral or intellectual Ideas; therefore all will grant, that the Nature of the Office can never be known by the meer Sound of the Word Overlooker. (4.) I add farther, the Word Bishop, or Episcopus, even when it is thus translated from a sensible Idea, to include several intellectual Ideas, may yet equally fignify an Overseer of the Poor; an Inspector of the Customs; a Surveyor of the Highways; a Supervisor of the Excise, &c. but by the Consent of Men, and the Language of Scripture, it is appropriated to fignify a facred Office in the Church. (r.) This very Idea and Name, thus translated from Things sensible, to signify a spiritual and sac ed Thing, contains but one Property of it, (viz.) one that has an Oversight, or Care over others: But it does not tell us, whether it includes a Care

Care over one Church, or many; over the Laity, or the Clergy. (6.) Thence it follows, that those who in the complex Idea of the Word Bishop include an Oversight over the Clergy, or over a whole Diocese of People, a Superiority to Presbyters, a distinct Power of Ordination, &c. must necessarily disagree with those who include in it only the Care of a fingle Congregation. according to the various Opinions of Men, this Word signifies a Pope, a Gallican Bishop, a Lutheran Superintendant, an English Prelate, a Pastor of a single Assembly, or a Presbyter or Elder. Thus they quarrel with each other perpetually; and it is well if any of them all have hit precisely the Sense of the sacred Writers, and included just the same Ideas in it, and no others. I might make all the same Remarks on the Word Church, which has been the Occasion of as many and as furious Controversies.

SECT. II.

Of negative and positive Terms.

FROM these and other Considerations it will follow, that if we would avoid Error in our Pursuit of Knowledge, we must take good heed to the Use of Words and Terms, and be acquainted with the various Kinds of them.

I. Terms are either positive or negative:

Negative Terms are such as have a little Word or Syllable of denying joined to them, according to the various Idioms of every Language, as Unpleasant, Imprudent, Immortal, Irregular, Ignorant, Infinite, Endless, Lifeless, Deathless, Nonfense, Abyss, Anonymous, where the Prepositions

Un, Im, In, Non, A, An, and the Termination less, fignify a Negation, either in English, Latin, or Greek.

Positive Terms are those which have no such negative Appendices belonging to them, as Life,

Death, End, Sense, Mortal.

But so unhappily are our Words and Ideas link'd together, that we can never know which are positive Ideas, and which are negative, by the Word that is us'd to express them, and that for these Reasons.

1st, There are some positive Terms which are made to signify a negative Idea; as Dead is properly a Thing that is deprived of Life; Blind implys a Negation or Privation of Sight; Deaf a want of Hearing; and Dumb a Denial of Speech.

2^{dly}, There are also some negative Terms, which imply positive Ideas, such as immortal and death-less, which signify Ever-living, or a Continuance in Life: Insolent signifies rude and haughty: Indemnify to keep safe: And Insinite perhaps has a positive Idea too, for it is an Idea ever growing; and when it is applied to God it signifies his com-

pleat Perfection.

3^{dly}, There are both positive and negative Terms, invented to signify the same, and contrary Ideas; as Unhappy and Miserable, Sinless and Holy, Pure and Undefiled, Impure and Filthy, Unkind and Cruel, Irreligious and Profane, Unforgiving and Revengeful, &c. and there is a great deal of Beauty and Convenience deriv'd to any Language from this Variety of Expression; the sometimes it a little consounds our Conceptions of Being and Not-Being, our positive and negative Ideas.

Words which are negative in their original Language, but feem positive to an Englishman, because

the

the Negation is unknown; as Abys, a Place without a Bottom; Anodyne, an easing Medicine; Amnesty, an Unremembrance or general Pardon; Anarchy, a State without Government; Anonymous, i. e. nameless, Inept, i. e. not sit; Iniquity, i. e. Unrighteousness; Infant, one that can't speak (viz.) a Child; Injurious, not doing Justice or

Right.

The Way therefore to know whether any Idea be negative or not, is, to consider whether it primarily imply the Absence of any positive Being, or Mode of Being; if it doth, then it is a Negation or negative Idea; otherwise it is a positive one, whether the Word that expresses it be positive or negative. Yet after all, in many Cases this is very hard to determine; as in Amnesty, Infinite, Abys, which are originally Negative Terms, but they signify Pardon, &c. which seem to be Positives. So Darkness, Madness, Clown, are positive Terms; but they imply the want of Light, the want of Reason, and the want of Manners; and perhaps these may be ranked among the negative Ideas.

Here Note, that in the English Tongue two negative Terms are equal to one positive, and signify the same Thing, as, not unhappy signifies happy; not immortal signifies mortal; he is no imprudent Man, i. e. he is a Man of Prudence: But the Sense and Force of the Word in such a negative way of Expression seems to be a little diminish'd.

SECT. III.

Of simple and complex Terms.

II. TErms are divided into simple or complex. A simple Term is one Word, a complex Term is when more Words are us'd to signify one Thing.

Some Terms are complex in Words, but not in Sense, such is the second Emperor of Rome; for it excites in our Mind only the Idea of one Man

(viz.) Augustus.

Some Terms are complex in Sense, but not in Words; so when I say an Army, a Forest, I mean a Multitude of Men, or Trees; and almost all our moral Ideas, as well as many of our natural ones, are express'd in this manner; Religion, Piety, Loyalty, Knavery, Thest, include a Variety of Ideas in each Term.

There are other Terms which are complex both in Words and Sense; so when I say, a sierce Dog, or a pious Man, it excites an Idea, not only of those two Creatures, but of their peculiar Cha-

racters also.

Among the Terms that are complex in Sense but not in Words, we may reckon those simple Terms which contain a primary and a secondary Idea in them; as when I hear my Neighbour speak that which is not true, and I say to him this is not true, or this is false, I only convey to him the naked Idea of his Error; this is the primary Idea: But if I say it is a Lye, the Word Lye carries also a secondary Idea in it, for it implies both the Falshood of the Speaker. On the other hand, if I say it is a Mistake, this carries also a secondary Idea with

it; for it not only refers to the Falshood of his Speech, but it includes my Tenderness and Civility to him at the same Time. Another Instance may be this; when I use the Word Incest, Adultery, and Murder, I convey to another not only the primary Idea of those Actions, but I include also the secondary Idea of their Unlawfulness, and

my Abhorrence of them.

Note, 1st, Hence it comes to pass, that among Words which fignify the same principal Ideas, fome are clean and decent, others unclean; some chaste, others obscene; some are kind, others are affronting and reproachful, because of the secondary Idea which Custom has affix'd to them. And it is the Part of a wise Man, when there is a Necessity of expressing any evil Actions, to do it either by a Word that has a secondary Idea of Kindness, or Softness; or a Word that carries in it an Idea of Rebuke and Severity, according as the Case requires: So when there is a Necessity of expressing things unclean or obscenc, a wife Man will do it in the most decent Language, to excite as few uncleanly Ideas as possible in the Minds of the Hearers.

Note, 2^d, In Length of Time, and by the Power of Custom, Words sometimes change their primary Ideas, as shall be declared, and sometimes they have chang'd their secondary Ideas, tho' the primary Ideas may remain: So Words that were once chaste, by frequent Use grow obscene and uncleanly; and Words that were once bonourable, may in the next Generation grow mean and contemptible. So the Word Dame originally signified a Mistress of a Family, who was a Lady, and it is used still in the English Law to signify a Lady; but in common Use now-a-days it represents a Farmer's Wise, or a Mistress of a Family E 4

of the lower Rank in the Country. So those Words of Rabshakeh, Isa. xxxvi. 12. in our Translation, (Eat their own Dung, &c.) were doubtless decent and clean Language, when our Translators wrote them, above a hundred Years ago. The Word Dung has maintain'd its old secondary Idea and inosfensive Sense to this Day; but the other Word in that Sentence has by Custom acquired a more uncleanly Idea, and should now rather be chang'd into a more decent Term, and so it should be read in publick, unless it should be thought more proper to omit the Sentence *.

For this Reason it is, that the Jewish Rabbins have supplied other chaste Words in the Margin of the Hebrew Bible, where the Words of the Text, thro' Time and Custom, are degenerated, so as to carry any base and unclean secondary Idea in them; and they read the Word which is in the Margin, which they call Keri, and not that which was written in the Text, which they call

Chetib.

SECT. IV.

Of Words common and proper.

III. Words and Names are either common or proper. Common Names are such as stand for universal Ideas, or a whole Rank of Beings, whether general or special. These are call'd Appellatives; so Fish, Bird, Man, City, River, are common Names; and so are Trout, Eel, Lobster, for they all agree to many Individuals, and some of them to many Species: But Cicero, Virgil, Buce-

^{*} So in some Places of the sacred Historians where it is written, Every one that piffes against the Wall, we should read Every Male.

phalus, London, Rome, Atna, the Thames, are proper Names, for each of them agrees only to

one single Being.

Note here first, that a proper Name may become in some Sense common, when it hath been given to several Beings of the same Kind; so Casar, which was the proper Name of the first Emperor Julius, became also a common Name to all the following Emperors. And Tea, which was the proper Name of one fort of Indian Leaf, is now-a-days become a common Name for many Infusions of Herbs, or Plants, in Water; as Sage-Tea, Alchoof-Tea, Lemon-Tea, &c. So Peter, Thomas, John, William, may be reckoned com-mon Names also, because they are given to many Persons, unless they are determined to signify a fingle Person, at any particular Time, or Place.

Note in the second Place, that a common Name

may become proper by Custom, or by the Time, or Place, or Persons that use it; as in Great Britain, when we say the King, we mean our present rightful Sovereign King George, who now reigns; when we speak of the Prince, we intend his Royal Highness George Prince of Wales: If we mention the City when we are near London, we generally mean the City of London; when in a Country Town, we say the Parson or the Esquire, all the Parish knows who are the single Persons intended by it; so when we are speaking of the History of the New Testament, and use the Words Peter, Paul, John, we mean those three Apostles.

Note in the third Place, that any common Name whatfoever is made proper, by Terms of Particularity added to it, as the common Words Pope, King, Horse, Garden, Book, Knife, &c. are defign'd to fignify a fingular Idea, when we fay the present Pope; the King of Great Britain; the Horse that won the last Plate at New-Market; the Royal Garden at Kensington; this Book; that Knife, &c.

SECT. V.

Of concrete and abstract Terms.

IV. W Ords or Terms are divided into abstract and concrete.

Abstract Terms signify the Mode or Quality of a Being, without any Regard to the Subject in which it is; as Whiteness, Roundness, Length,

Breadth, Wisdom, Mortality, Life, Death.

Concrete Terms, while they express the Quality, do also either express, or imply, or refer to some Subject to which it belongs; as white, round, long, broad, wise, mortal, living, dead. But these are not always Noun Adjectives in a grammatical Sense; for a Fool, a Knave, a Philosopher, and many other Concretes are Substantives, as well as Knavery, Folly, and Philosophy, which are the abstract Terms that belong to them.

SECT. VI.

Of univocal and equivocal Words.

V. Words and Terms are either univocal or equivocal. Univocal Words, are such as signify but one Idea, or at least but one fort of Thing; equivocal Words are such as signify two or more different Ideas, or different sorts of Objects. The Words Book, Bible, Fish, House, Elephant, may be call'd univocal Words; for I know

know not that they fignify any thing else but those Ideas to which they are generally affixt; but Head is an equivocal Word, for it fignifies the Head of a Nail or a Pin, as well as of an Animal: Nail is an equivocal Word, it is us'd for the Nail of the Hand or Foot, and for an iron Nail to fasten any thing. Post is equivocal, it is a Piece of Timber, or a swift Messenger. A Church is a religious Assembly, or the large fair Building where they meet; and sometimes the same Word means a Synod of Bishops, or of Presbyters, and in some Places it is the Pope and a general Council.

Here let it be noted, that when two or more Words fignify the same Thing, as Wave and Billow, Mead and Meadow, they are usually call'd synonymous Words: But it seems very strange, that Words which are directly contrary to each other, should sometimes represent almost the same Ideas; yet thus it is in some sew Instances; a valuable, or an invaluable Blessing; a shameful, or a shameless Villain; a thick Skull, or a thin skulled Fellow, a meer Paper Skull; a Man of a large Conscience, little Conscience, or no Conscience; a samous Rascal, or an insamous one: So uncertain a Thing is human Language, whose Foundation and Support is Custom.

As Words fignifying the same Thing are call'd fynonymous; so equivocal Words, or those which fignify several Things, are call'd homonymous, or ambiguous; and when Persons use such ambiguous Words, with a Design to deceive, it is call'd E-

quivocation.

Our simple Ideas, and especially the sensible Qualities, furnish us with a great Variety of equivocal, or ambiguous Words; for these being the first, and most natural Ideas we have, we borrow some

of their Names, to fignify many other Ideas, both fimple and complex. The Word Sweet expresses the pleasant Perceptions of almost every Sense; Sugar is sweet, but it hath not the same Sweetness as Musick; nor hath Musick the Sweetness of a Rose; and a sweet Prospect differs from them all: Nor yet have any of these the same Sweetness as Discourse, Counsel, or Meditation hath; yet the royal Pfalmist saith of a Man, We took sweet Counsel together; and of God, My Meditation of him shall be sweet. Bitter is also such an equivocal Word; there is bitter Wormwood, there are bitter Words, there are bitter Enemies, and a bitter cold Morning. So there is a Sharpness in Vinegar, and there is a Sharpness in Pain, in Sorrow, and in Reproach; there is a sharp Eye, a sharp Wit, and a sharp Sword: But there is not one of these seven Sharpnesses, the same as another of them, and a sharp East Wind is different from

There are also Verbs, or Words of Action, which are equivocal as well as Nouns, or Names. The Words to bear, to take, to come, to get, are sufficient Instances of it; as when we say, to bear a Burden, to bear Sorrow or Reproach, to bear a Name, to bear a Grudge, to bear Fruit, or to bear Children; the Word bear is us'd in very different Senses. And so is the Word get, when we say, to get Money, to get in, to get off, to get ready, to get a Stomach, and to get a Cold, &c.

There is also a great deal of Ambiguity in many of the English Particles, as, but, before, beside, with, without, that, then, there, for, forth, above, about, &c. of which Grammars and Dictiona-

ries will sufficiently inform us.

SECT. VII.

Various Kinds of equivocal Words.

IT would be endless to run through all the Varieties of Words, and Terms, which have difrent Senses applied to them; I shall only mention, therefore, a few of the most remarkable and most useful Distinctions among them.

Is, The first Division of equivocal Words lets us know that some are equivocal only in their Sound or Pronunciation; others are equivocal only in Writing; and others, both in Writing, and in

Sound.

Words equivocal in Sound only, are such as these; the Rein of a Bridle, which hath the same Sound with the Reign of a King, or a Shower of Rain, but all three have different Letters, and distinct Spelling. So Might, or Strength, is equivocal in Sound, but differs in Writing from Mite, a little Animal, or a small Piece of Money. And the Verb to write, has the same Sound with Wright a Workman, Right or Equity, and Rite or Ceremony; but it is spelled very differently from them all.

Words equivocal in Writing only, are such as these; to tear in Pieces, has the same Spelling with a Tear: To lead, or guide, has the same Letters as Lead the Metal: And a Bowl for Recreation is written the same Way as a Bowl for drinking, but the Pronunciation of all these is different.

But those Words which are most commonly and justly call'd equivocal, are such as are both written and pronounced the same Way, and yet have different Senses or Ideas belonging to them; such

fuch are all the Instances which were given in

the preceding Section.

Among the Words which are equivocal in Sound only, and not in Writing, there is a large Field for Persons who delight in Fests and Puns, in Riddles and Quibbles, to sport themselves. This sort of Words is also us'd by wanton Persons, to convey lewd Ideas, under the Covert of Expressions capable of a chaste Meaning, which are called double Entendres; or when Persons speak Falsbood with a Design to deceive, under the Covert of Truth. Tho' it must be confest, that all sorts of equivocal Words yield sufficient Matter for such Purposes.

There are many Cases also, wherein an equivocal Word is us'd for the sake of *Decency* to cover a foul Idea: For the most chaste, and modest, and well-bred Persons, having sometimes a Necessity to speak of the Things of Nature, convey their Ideas in the most inosfensive Language by this Means. And indeed, the meer Poverty of all Languages makes it necessary to use equivocal Words upon many Occasions, as the common Writings of Men, and even the holy Book of

God sufficiently manifest.

2^{dly}, Equivocal Words are usually distinguished, according to their Original, into such, whose various Senses arise from meer Chance or Accident; and such as are made equivocal by Design; as the Word Bear signifies a shaggy Beast, and it signifies also to bear or carry a Burden; this seems to be the meer effect of Chance: But if I call my Dog, Bear, because he is shaggy, or call one of the Northern Constellations by that Name, from a fancied Situation of the Stars in the Shape of that Animal, then it is by Design that the Word is made yet farther equivocal.

But

But because I think this common Account of the Spring or Origin of equivocal Words is too flight and imperfect, I shall reserve this Subject to be treated of by it self, and proceed to the third

Division.

3 dly, Ambiguous or equivocal Words, are such, as are sometimes taken in a large and general Sense, and sometimes in a Sense more strict and limited, and have different Ideas affix'd to them accordingly. Religion or Virtue, taken in a large Sense, includes both our Duty to God and our Neighbour; but in a more strict, limited, and proper Sense, Virtue signifies our Duty towards Men, and Religion our Duty to God. Virtue may yet be taken in the strictest Sense, and then it signifies Power or Courage, which is the Sense of it in some Places of the New Testament. So Grace, taken in a large Sense means the Favour of God, and all the spiritual Blessings that proceed from it, (which is a frequent Sense of it in the Bible) but in a limited Sense it signifies the Habit of Holiness wrought in us by Divine Favour, or a complex Idea of the Christian Virtues. It may be also taken in the strictest Sense; and thus it signifies any single Christian Virtue, as in 2 Cor. viii. 6, 7. where it is us'd for Liberality. So a City, in a strict and proper Sense, means the Houses inclosed within the Walls; in a larger Sense it reaches to all the Suburbs.

This larger and stricter Sense of a Word is us'd in almost all the Sciences, as well as in Theology, and in common Life. The Word Geography, taken in a strict Sense, fignifies the Knowledge of the Circles of the earthly Globe, and the Situation of the various Parts of the Earth; when it is taken in a little larger Sense, it includes the Knowledge of the Seas also; and in the largest Sense of all, it extends to the various Customs, Habits, and Governments of Nations. When an Astronomer uses the Word Star in its proper and strict Sense, it is applied only to the fix'd Stars, but in

a large Sense it includes the Planets also.

This equivocal Sense of Words belongs also to many proper Names: So Asia taken in the largest Sense is one Quarter of the World; in a more limited Sense it signifies Natolia, or the lesser Asia; but in the strictest Sense it means no more than one little Province of Natolia, where stood the Cities of Ephesus, Smyrna, Sardis, &c. and this is the most frequent Sense of it in the New Testament. Flanders and Holland, in a strict Sense, are but two single Provinces among the seventeen; but in a large Sense Holland includes seven of them, and Flanders ten.

There are also some very common and little Words in all Languages, that are us'd in a more extensive or more limited Sense; such as all, every, whosever, &c. When the Apostle says, all Men have sinned, and all Men must die, all is taken in its most universal and extensive Sense, including all Mankind, Rom. v. 12. When he appoints Prayer to be made for all Men, it appears by the following Verses, that he restrains the Word all to signify chiefly all Ranks and Degrees of Men, I Tim. ii. 1. But when St. Paul says, I please all Men in all Things, I Cor. x. 33. the Word all is exceedingly limited, for it reaches no farther than that he pleas'd all those Men whom he conversed with, in all Things that were lawful.

4thly, Equivocal Words are in the fourth Place distinguished by their literal or figurative Sense. Words are us'd in a proper or literal Sense, when they are design'd to signify those Ideas for which they were originally made, or to which they are

primarily

primarily and generally annexed; but they are us'd in a figurative or tropical Sense, when they are made to signify some Things, which only bear either a Reference or a Resemblance to the primary Ideas of them. So when two Princes contend by their Armies, we say they are at War in a proper Sense; but when we say there is a War betwixt the Winds and the Waves in a Storm, this is call'd Figurative, and the peculiar Figure is a Metaphor. So when the Scripture fays, Riches make themselves Wings, and fly away as an Eagle toward Heaven, the Wings and the Flight of the Eagle are proper Expressions; but when Flight and Wings are applied to Riches, it is only by Way of Figure and Metaphor. So when Man is faid to repent, or laugh, or grieve, it is literally taken; but when God is faid to be grieved, to repent, to laugh, &c. these are all figurative Expressions, borrowed from a Resemblance to Mankind. And when the Words Job or Esther are us'd to signify those very Persons, it is the literal Sense of them; but when they fignify those two Books of Scripture, this is a figurative Sense. The Names of Horace, Juvenal, and Milton, are us'd in the same manner, either for Books or Men.

When a Word, which originally fignifies any particular Idea or Object, is attributed to several other Objects, not so much by way of Resemblance, but rather on the Account of some evident Reference or Relation to the original Idea, this is sometimes peculiarly call'd an analogical Word; so a sound or healthy Pulse; a sound Digestion; sound Sleep, are all so call'd, with Reference to a sound and healthy Constitution; but if you speak of found Doctrine, or found Speech, this is by way of Resemblance to Health, and the W ords Words are metaphorical: Yet many Times Analogy and Metaphor are us'd promiscuously in the

same Sense, and not distinguished.

Here Note, That the Design of metaphorical Language and Figures of Speech is not meerly to represent our Ideas, but to represent them with Vivacity, Spirit, Affection, and Power; and tho' they often make a deeper Impression on the Mind of the Hearer, yet they do as often lead him into a Mistake, if they are us'd at improper Times and Places. Therefore, where the Design of the Speaker or Writer is meerly to explain, to instruct, and to lead into the Knowledge of naked Truth, he ought, for the most part, to use plain and proper Words, if the Language affords them, and not to deal much in figurative Speech. But this fort of Terms is us'd very profitably by Poets and Orators, whose Business is to move, and perfuade, and work on the Passions, as well as on the Understanding. Figures are also happily employed in proverbial moral Sayings by the wisest and the best of Men, to impress them deeper on the Memory by sensible Images; and they are often us'd for other valuable Purposes in the sacred Writings.

Words; as, there are some which have a different Meaning in common Language, from what they have in the Sciences; the Word Passion signifies the receiving any Action in a large philosophical Sense; in a more limited philosophical Sense, it signifies any of the Affections of human Nature, as Love, Fear, Joy, Sorrow, &c. But the common People confine it only to Anger. So the Word Simple philosophically signifies Single, but vulgar-

ly it is us'd for Foolish.

6thly, Other equivocal Words are us'd some-times in an absolute Sense, as when God is call'd perfett, which allows of no Defect; and some-times in a comparative Sense, as good Men are oftentimes call'd perfett in Scripture, in Comparison of those who are much inferior to them in Knowledge or Holiness: But I have dwelt rather too long upon this Subject already, therefore I add no more.

SECT. VIII.

The Origin or Causes of equivocal Words.

OW, that we may become more skilful in guarding our felves and others against the Dangers of Mistake which may arise from equivo-Chapter with a short Account of the various Ways or Means whereby a Word changes its Signification, or acquires any new Sense, and thus becomes equivocal, especially if it keep its old Sense also.

1. Meer Chance sometimes gives the same Word different Senses; as the Word Light signifies a Body that is not heavy; and it also signifies the Effect of Sun-Beams, or the Medium whereby we see Objects: This is meerly accidental, for there seems to be no Connection between these two

Senses, nor any Reason for them.

2. Error and Mistake is another Occasion of giving various Senses to the same Word; as when different Persons read the Names of Priest, Bishop, Church, Easter, &c. in the New Testament, they affix different Ideas to them, for want of Acquaintance with the true Meaning of the sa-cred Writer; tho' it must be confess'd, these va-

F 2

rious Senses, which might arise at first from honest Mistake, may be culpably supported and propagated by *Interest*, *Ambition*, *Prejudice*, and a *Party-Spirit* on any side.

3. Time and Custom alters the meaning of Words. Knave heretofore signified a diligent Servant (Gnavus;) and a Villain was a meaner Tenant to the Lord of the Manor (Villicus;) but now both those Words carry an Idea of Wickedness and Reproach in them. A Ballad once signified a solemn and sacred Song, as well as one that is trivial, when Solomon's Song was call'd the Ballad of Ballads; but now it is applied to nothing but trifling Verse, or comical Subjects.

4. Words change their Sense by Figures and Metaphors, which are deriv'd from some real Analogy or Resemblance between several Things; as when Wings and Flight are applied to Riches, it signifies only, that the Owner may as easily lose them, as he would lose a Bird who slew away

with Wings.

And I think, under this Head, we may rank those Words, which signify different Ideas, by a fort of an unaccountable far-fetcht Analogy, or distant Resemblance, that Fancy has introduced between one thing and another; as when we say, the Meat is green when it is half-roasted: We speak of airing Linen by the Fire, when we mean drying or warming it: We call for round Coals for the Chimney, when we mean large square ones: And we talk of the Wing of a Rabbit, when we mean the Fore-Leg: The true Reason of these Appellations we leave to the Criticks.

5. Words also change their Sense by the special Occasion of using them, the peculiar manner of Pronunciation, the Sound of the Voice, the Motion of the Face, or Gestures of the Body; so when an

angry

angry Master says to his Servant, it is bravely done, or you are a fine Gentleman, he means just the contrary; namely, it is very ill done; you are a forry fellow: It is one way of giving a severe Reproach, for the Words are spoken by way of Sarcasm or Irony.

6. Words are applied to various Senses, by new Ideas appearing or arising faster than new Words are framed. So when Gun-Powder was found out, the Word Powder, which before signified only Dust, was made then to signify that Mixture or Composition of Nitre, Charcoal, &c. and the Name Canon, which before signified a Law or a Rule, is now also given to a great Gun, which gives Laws to Nations. So Footboys, who had frequently the common Name of Jack given them, were kept to turn the Spit, or to pull off their Master's Boots; but when Instruments were invented for both those Services, they were both call'd Jacks, tho' one was of Iron, the other of Wood, and very different in their Form.

7. Words alter their Significations according to the Ideas of the various Persons, Sects, or Parties who use them, as we have hinted before; so when a Papist uses the Word Hereticks, he generally means the Protestants; when a Protestant uses the Word, he means any Persons who are wilfully (and perhaps contentiously) obstinate in fundamental Errors. When a Jew speaks of the true Religion, he means the Institutions of Moses; when a Turk mentions it, he intends the Doctrine of Mahomet; but when a Christian makes use of it, he designs to signify Christianity, or the Truths and Precepts of the Gospel.

8. Words have different Significations according to the Book, Writing, or Discourse in which they stand. So in a Treatise of Anatomy, a Foot

F 3 fignifics

fignifics that Member in the Body of Man: But in a Book of Geometry or Mensuration it signifies twelve Inches.

If I had room to exemplify most of these Particulars in one single Word, I know not where to chuse a fitter than the Word Sound, which seems (as it were) by Chance, to signify three distinct Ideas, (viz.) Healthy, (from Sanus) as a sound Body; Noise (from Sonus) as a shrill Sound; and to sound the Sea (perhaps from the French Sonde a Probe, or an Instrument to find the Depth of Water.) From these three, which I may call original Senses, various derivative Senses arise; as sound Sleep, sound Lungs, sound Wind and Limb, a sound Heart, a sound Mind, sound Dostrine, a sound Divine, sound Reason, a sound Cask, sound Timber, a sound Reproof, to beat one soundly, to sound ones Meaning or Inclination, and a sound or narrow Sea; turn all these into Latin, and the Variety will appear plain.

I confess, some sew of these which I have mention'd, as the different Springs of equivocal Words, may be reduced in some Cases to the same Original: But it must also be granted, that there may be other Ways beside these whereby a Word comes to extend its Signification, to include various Ideas, and become equivocal. And tho' it is the Business of a Grammarian to pursue these Remarks with more Variety and Particularity, yet it is also the Work of a Logician to give Notice of these Things, lest Darkness, Contusion, and Perplexity be brought into our Conceptions by the Means of Words, and thence our Judgments and Reasonings become erroneous.

CHAP. V.

General Directions relating to our Ideas.

Direction I. Furnish your selves with a rich Variety of Ideas; acquaint your selves with Things antient and modern; Things natural, civil and religious; Things domestick and national; Things of your native Land, and of foreign Countries; Things present, past and future; and above all, be well acquainted with God and your selves; learn animal Nature, and the workings of your own Spirits.

Such a general Acquaintance with Things will

be of very great Advantage.

The first Benesit of it is this; it will assist the Use of Reason in all its following Operations; it will teach you to judge of Things aright, to argue justly, and to methodise your Thoughts with Accuracy. When you shall find several Things akin to each other, and several different from each other, agreeing in some Part of their Idea, and disagreeing in other Parts, you will range your Ideas in better Order, you will be more easily led into a distinct Knowledge of Things, and will obtain a rich Store of proper Thoughts and Arguments upon all Occasions.

You will tell me perhaps that you design the Study of the Law or Divinity; and what Good can natural Philosophy or Mathematicks do you, or any other Science, not directly subordinate to your chief Design? But let it be consider'd, that all Sciences have a fort of mutual Connection; and Knowledge of all Kinds sits the Mind to reason and judge better concerning any particular Sub-

F 4 ject

ject. I have known a Judge upon the Bench betray his Ignorance, and appear a little confus'd in his Sentiments about a Case of suspected Murder brought before him, for want of some Acquaintance with animal Nature and Philosophy.

Another Benefit of it is this; such a large and general Acquaintance with Things, will secure you from perpetual Admirations and Surprises, and guard you against that Weakness of ignorant Persons, who have never seen any thing beyond the Confines of their own Dwelling, and therefore they wonder at almost every Thing they see; every Thing beyond the Smoke of their own Chimney, and the Reach of their own Windows, is new and strange to them.

A third Benefit of such an universal Acquaintance with Things, is this; it will keep you from being too positive and dogmatical, from an Excess of Credulity and Unbelief; i. e. a Readiness to believe, or to deny every Thing at first hearing; when you shall have often seen, that strange and uncommon Things, which once seem'd incredible, are found to be true, and Things very commonly

receiv'd have been found false.

The Way of attaining such an extensive Treasure of Ideas, is, with Diligence to apply your self to read the best Books; converse with the most knowing and the wisest of Men, and endeavour to improve by every Person in whose Company you are; suffer no Hour to pass away in a lazy Idleness, in impertinent Chattering or useless Trisses: Visit other Cities and Countries when you have seen your own, under the Care of one who can teach you to profit by Traveling, and to make wise Observations; indulge a just Curiosity in seeing the Wonders of Art and Nature; search into Things your selves, as well as learn them

them from others; be acquainted with Men as well as Books; learn all Things as much as you can at first Hand; and let as many of your Ideas as possible be the Representations of Things, and not meerly the Representations of other Mens Ideas: Thus your Soul, like some noble Euilding, shall be richly furnish'd with original Paintings, and not with meer Copies.

Direct. II. Use the most proper Methods to retain that Treasure of Ideas which you have acquired; for the Mind is ready to let many of them slip, unless some Pains and Labour be taken to fix them

upon the Memory.

And more especially let those Ideas be laid up and preserv'd with the greatest Care, which are most directly suited, either to your eternal Welfare as a Christian, or to your particular Station and Profession in this Life; for tho' the former Rule recommends an universal Acquaintance with Things, yet it is but a more general and supersicial Knowledge that is requir'd or expected of any Man, in Things which are utterly foreign to his own Business; but it is necessary you should have a more particular and accurate Acquaintance with those Things that refer to your peculiar Province and Duty in this Life, or your Happiness in another.

There are some Persons who never arrive at any deep, solid, or valuable Knowledge in any Science or any Business of Life, because they are perpetually fluttering over the Surface of Things in a curious and wandring Search of infinite Variety; ever hearing, reading, or asking after something new, but impatient of any Labour to lay up and preserve the Ideas they have gained: Their Souls may be compared to a Looking-Glass, that

that wherefoever you turn it, it receives the Images of all Objects, but retains none.

In order to preserve your Treasure of Ideas and the Knowledge you have gain'd, pursue these

Advices, especially in your younger Years.

or heard, or read, which may have made any Addition to your Understanding: Read the Writings of God and Men with Diligence and perpetual Reviews: Be not fond of hastning to a new Book, or a new Chapter, till you have well fix'd and establish'd in your Minds what was useful in the last: Make use of your Memory in this manner, and you will sensibly experience a gradual Improvement of it, while you take Care not to load it to excess.

beard, or learnt with some proper Acquaintance; this will make a fresh Impression upon your Memory; and if you have no fellow Student at hand, none of equal Rank with your selves, tell it over to any of your Acquaintance, where you can do it with Propriety and Decency; and whether they learn any thing by it or no, your own Repetition of it will be an Improvement to your self: And this Practice also will furnish you with a Variety of Words and copious Language, to express your Thoughts upon all Occasions.

3. Commit to writing some of the most confiderable Improvements which you daily make, at least such Hints as may recall them again to your Mind, when perhaps they are vanish'd and lost. And here I think Mr. Locke's Method of Adverfaria or common Places, which he describes in the end of the first Volume of his posthumous Works, is the best; using no learned Method at all, setting down Things as they occur, leaving a dis-

tinct

tinct Page for each Subject, and making an In-

dex to the Pages.

C.V.

At the end of every Week, or Month, or Year, you may review your Remarks for these two Reasons: First, to judge of your own Improvement, when you shall find that many of your younger Collections are either weak and triffing; or if they are just and proper, yet they are grown now so familiar to you, that you will thereby see your own Advancement in Knowledge. And in the next Place what Remarks you find there worthy of your riper Observation, you may note them with a marginal Star, instead of transcribing them, as being worthy of your second Year's Review, when the others are neglected.

To shorten something of this Labour, if the Books which you read are your own, mark with a Pen, or Pencil, the most considerable Things in them which you defire to remember. Thus you may read that Book the second Time over with half the Trouble, by your Eye running over the Paragraphs which your Pencil has noted. It is but a very weak Objection against this Practice to fay, I shall spoil my Book; for I persuade my self that you did not buy it as a Bookseller tofell it again for Gain, but as a Scholar to improve your Mind by it; and if the Mind be improv'd, your Advantage is abundant, tho' your Book yield less Money to your Executors.

Note, This Advice of Writing, Marking, and Reviewing your Marks, refers chiefly to those occasional Notions you meet with either in Reading or in Conversation: But when you meet with etitler in Resaing of in Conversation: But when you are directly and professedly pursuing any Subject of Knowledge in a good System in your younger Years, the System it self is your Common-Place Book, and must be entirely reviewed. The same may be said conversing any Treatise which closely, succincily and accurately

handles any particular Theme,

Direct. III. As you proceed both in Learning and in Life, make a wife Observation what are the Ideas, what the Discourses and the Parts of Knowledge that have been more or less useful to your self or others. In our younger Years, while we are furnishing our Minds with a Treasure of Ideas, our Experience is but small, and our Judgment weak; it is therefore impossible at that Age to determine aright concerning the real Advantage and Usefulness of many Things we learn. But when Age and Experience have matured your Judgment, then you will gradually drop the more useless Part of your younger Furniture, and be more solicitous to retain that which is most necessary for your Welfare in this Life, or a better. Hereby you will come to make the same Complaint that almost every learned Man has done, after long Experience in Study, and in the Affairs of human Life and Religion; Alas! how many Hours, and Days, and Months, have I lost in pursuing some Parts of Learning, and in reading some Authors, which have turned to no other Account, but to inform me, that they were not worth my Labour and Pursuit! Happy the Man who has a wife Tutor to conduct him thro' all the Sciences in the first Years of his Study; and who has a prudent Friend always at Hand to point out to him from Experience how much of every Science is worth his Pursuit! and happy the Student that is fo wife as to follow fuch Advice!

Direct. IV. Learn to acquire a Government over your Ideas and your Thoughts, that they may come when they are called, and depart when they are bidden. There are some Thoughts that rise and intrude upon us while we shun them; there are others

others that fly from us, when we would hold and fix them.

If the Ideas which you would willingly make the Matter of your present Meditation are ready to fly from you, you must be obstinate in the Purfuit of them by an Habit of fixed Meditation; you must keep your Soul to the Work, when it is ready to start aside every Moment, unless you will abandon your felf to be a Slave to every wild Imagination. It is a common, but it is an unhappy and a shameful Thing, that every Trisle that comes across the Senses or Fancy should divert us, that a buzzing Fly should teize our Spirits, and scatter our best Ideas: But we must learn to be deaf and regardless of other Things, besides that which we make the present Subject of our Meditation: And in order to help a wandring and fickle Humour, it is useful to have a Book or Paper in our Hands, which has some proper Hints of the Subject that we defign to pursue. We must be resolute and laborious, and sometimes conflict with our felves if we would be wife and learned.

Yet I would not be too severe in this Rule: It must be confess'd there are Seasons when the Mind, or rather the Brain is overtired or jaded with Study or thinking; or upon some other Accounts animal Nature may be languid or cloudy, and unsit to assist the Spirit in Meditation; at such Seasons (provided that they return not too often) it is better sometimes to yield to the present Indisposition; for if Nature intirely resist, nothing can be done to the Purpose, at least in that Subject or Science. Then you may think it proper to give your self up to some Hours of Leisure and Recreation, or useful Idleness; or if not, then turn your Thoughts to some other alluring Subject, and pore

no longer upon the first, till some brighter or more favourable Moments arise. A Student shall do more in one Hour, when all Things concur to invite him to any special Study, than in four Hours, at a dull and improper Season.

I would also give the same Advice, if some vain, or worthless, or foolish Idea will croud it felf into your Thoughts; and if you find that all your Labour and Wrestling cannot defend your self from it, then divert the Importunity of that which offends you by turning your Thoughts to some entertaining Subject, that may amuse a little and draw you off from the troublesome and imposing Guest; and many a Time also in such a Case, when the impertinent and intruding Ideas would divert from present Duty, Devotion and Prayer have been very successful to overcome fuch obstinate Troublers of the Peace and Profit of the Soul.

If the natural Genius and Temper be too volatile, fickle and wandring, fuch Persons ought in a more especial manner to apply themselves to mathematical Learning, and to begin their Studies with Arithmetick and Geometry; wherein new Truths, continually arising to the Mind out of the plainest and easiest Principles, will allure the Thoughts with incredible Pleasure in the Pursuit: This will give the Student fuch a delightful Tafte of Reasoning, as will fix his Attention to the fingle Subject which he pursues, and by Degrees will cure the habitual Levity of his Spirit: But let him not indulge and pursue these so far, as to neglect the prime Studies of his design'd Profession.

CHAP. VI.

Special Rules to direct our Conception of Things.

Great Part of what has been already written is design'd to lay a Foundation for those Rules, which may guide and regulate our Conceptions of Things; this is our main Business and Design in the first Part of Logick. Now if we can but direct our Thoughts to a just and happy Manner in forming our Ideas of Things, the other Operations of the Mind will not so eafily be perverted; because most of our Errors in Judgment, and the Weakness, Fallacy and Mistake of our Argumentation proceed from the Darkness, Confusion, Defect, or some other Irregularity in our Conceptions.

The Rules to affift and direct our Conceptions

are these.

1. Conceive of Things clearly and distinctly in their own Natures.

2. Conceive of Things compleatly in all their

3. Conceive of Things comprehensively in all their Properties and Relations.

4. Conceive of Things extensively in all their Kinds.

5. Conceive of Things orderly, or in a proper Method.

SECT. I.

Of gaining clear and distinct Ideas.

HE first Rule is this, Seek after a clear and distinct Conception of Things as they are in their own Nature, and do not content your selves with obscure and confused Ideas, where clearer are to be attained.

There are some Things indeed whereof distinct Ideas are scarce attainable, they seem to surpass the Capacity of the Understanding in our present State; such are the Notions of Eternal, Immense, Infinite, whether this Infinity be applied to Number, as an infinite Multitude; to Quantity, as infinite Length, Breadth; to Powers and Perfections, as Strength, Wisdom, or. Goodness infinite, &c. Tho' Mathematicians in their Way demonstrate several Things in the Doctrine of Infinites, yet there are still some insolvable Difficulties that attend the Ideas of Infinity, when it is applied to Mind or Body; and while it is in Reality but an Idea ever growing, we cannot have so clear and distinct a Conception of it as to secure us from Mistakes in some of our Reasonings about it.

There are many other Things that belong to the material World, wherein the sharpest Philosophers have never yet arriv'd at clear and distinct Ideas, such as the particular Shape, Situation, Contexture, Motion of the small Particles of Minerals, Metals, Plants, &c. whereby their very Natures and Essences are distinguished from each other. Nor have we either Senses or Instruments sufficiently nice and accurate to find them out. There are other Things in the World of Spirits, wherein

wherein our Ideas are very dark and confused, such as their Union with animal Nature, the Way of their acting on material Beings, and their Converse with each other. And tho' it is a laudable Ambition to search what may be known of these Matters, yet it is a vast Hindrance to the Enrichment of our Understandings, if we spend too much of our Time and Pains among Instinites and Unsearchables, and those Things for the Investigation whereof we are not surnish'd with proper Faculties in the present State. It is therefore of great Service to the true Improvement of the Mind to distinguish well between Knowables and Unknowables.

As far as Things are knowable by us, it is of excellent Use to accustom our selves to clear and distinct Ideas. Now among many other Occasions of the Darkness and Mistakes of our Minds, there are these two Things which most remarkably bring Confusion into our Ideas.

i. That from our Infancy we have had the I-deas of Things fo far connected with the *Ideas of Words*; that we often mistake Words for Things, we mingle and confound one with the other.

2. From our youngest Years we have been ever ready to consider Things, not so much in their own Natures, as in their various Respects to our selves, and chiefly to our Senses; and we have also joined and mingled the Ideas of some Things, with many other Ideas; to which they are not akin in their own Natures.

In order therefore to a clear and distinct Knowledge of Things, we must uncloath them of all these Relations and Mixtures, that we may contemplate them naked, and in their own Natures; and distinguish the Subject that we have in View from all other Subjects whatsoever: Now to per-

G form

form this well, we must here consider the Desinition of Words, and the Desinition of Things.

SECT. II.

Of the Definition of Words or Names.

F we could conceive of Things as Angels and unbodied Spirits do, without involving them in those Clouds which Words and Language throw upon them, we should seldom be in Danger of such Mistakes as are perpetually commit-ted by us in the present State; and indeed it would be of unknown Advantage to us to accustom our selves to form Ideas of Things without Words, that we might know them in their own proper Natures. But fince we must use Words, both to learn and to communicate most of our Notions, we should do it with just Rules of Caution. have already declar'd in part, how often and by what Means our Words become the Occasions of Errors in our Conception of Things. To remedy such Inconveniences, we must get an exact Definition of the Words we make use of, i.e. we must determine precisely the Sense of our Words, which is call'd the Definition of the Name.

Now a Definition of the Name being only a Declaration in what Sense the Word is used, or what Idea or Object we mean by it, this may be express'd by any one or more of the Properties, Effects or Circumstances of that Object which do sufficiently distinguish it from other Objects: As if I were to tell what I mean by the Word Air, I might say it is that thin Matter which we breathe in and breathe out continually; or it is that fluid Body in which the Birds fly a little above the Earth; or it is that invisible Matter which fills all Places

near

near the Earth, or which immediately encompasses the Globe of Earth and Water. So if I would tell what I mean by Light, I would say, it is that Medium whereby we see the Colours and Shapes of Things; or it is that which distinguishes the Day from the Night. If I were ask'd what I mean by Religion, I would answer, it is a Collection of all our Duties to God, if taken in a strict and limited Sense; but if taken in a large Sense, it is a Collection of all our Duties both to God and Man. These are call'd the Definitions of the Name.

Note, In defining the Name there is no Necessity that we should be acquainted with the intimate Essence or Nature of the Thing; for any manner of Description that will but sufficiently acquaint another Person what we mean by such a Word, is a fufficient Definition for the Name. And on this Account, a synonymous Word, or a meer Negation of the contrary, a Translation of the Word into another Tongue, or a grammatical Explication of it, is sometimes sufficient for this Purpose; as if one would know what I mean by a Sphere, I tell him it is a Globe; if he ask what is a Triangle, it is that which has three Angles; or an Oval is that which has the Shape of an Egg. Dark is that which has no Light; Asthma is a Difficulty of Breathing; a Diaphoretick Medicine, or a Sudorifick, is something that will provoke Sweating; and an Insolvent is a Man that cannot pay his Debts.

Since it is the Design of Logick, not only to assist us in Learning but in Teaching also, it is necessary that we should be furnished with some particular Directions relating to the Desinition of Names, both in Teaching and Learning.

Part L

SECT. III.

Directions concerning the Definition of Names.

Direct. I. H^{AVE} a Care of making use of meer Words, instead of Ideas; i.e. such Words as have no Meaning, no Definition belonging to them: Do not always imagine that there are Ideas wherefoever there are Names; for tho' Mankind hath so many Millions of Ideas more than they have Names, yet so foolish and lavish are we, that too often we use some Words in meer Waste, and have no Ideas for them; or at least, our Ideas are so exceedingly shatter'd and confus'd, broken and blended, various and unfettled, that they can fignify nothing toward the Improvement of the Understanding. You will find a great deal of Reason for this Remark, if you read the Popish School-men, or the mystick Divines.

Never rest satisfied therefore with meer Words which have no Ideas belonging to them, or at least no settled and determinate Ideas. Deal not in such empty Ware, whether you are a Learner or a Teacher; for hereby some Persons have made themselves rich in Words, and learned in their own Esteem; whereas in reality their Underflandings have been poor, and they knew nothing.

Let me give for Inflance some of those Writers or Talkers who deal much in the Words Nature, Fate, Luck, Chance, Perfection, Power, Life, Fortune, Instinct, &c. and that even in the most calm and instructive Parts of their Discourse; tho' neither they themselves nor their Hearers have any fettled Meaning under those Words ;

and

and thus they build up their Reasonings, and infer what they please, with an Ambition of the Name of Learning, or of sublime Elevations in Religion; whereas in truth, they do but amuse themselves and their Admirers with swelling Words of Vanity, understanding neither what they say, nor whereof they affirm. But this sort of Talk was reproved of old by the two chief Apostles St. Peter and St. Paul, I Tim. i. 7. and 2 Pet. ii. 18.

When Pretenders to Philosophy or good Sense grow fond of this fort of Learning, they dazle and confound their weaker Hearers, but fail under the Neglect of the Wise. The Epicureans are guilty of this Fault, when they ascribe the Formation of this World to Chance: The Aristotelians, when they say, Nature abhors a Vacuum: The Stoicks when they talk of Fate, which is fuperior to the Gods: And the Gamesters when they curse their Ill-Luck, or hope for the Favours of Fortune. Whereas, if they would tell us, that by the Word Nature they mean the Properties of any Being, or the Order of Things established at the Creation; that by the Word Fate they intend the Decrees of God, or the necessary Connection and Influence of second Causes and Esfeets; if by the Word Luck or Chance they fignify the absolute Negation of any determinate Cause, or only their Ignorance of any fuch Cause, we should know how to converse with them, and to assent to, or diffent from their Opinions. But while they flutter in the dark, and make a Noise with Words which have no fixt Ideas, they talk to the Wind, and can never profit.

I would make this Matter a little plainer still by Instances borrowed from the *Peripatetick* Philosophy, which was taught once in all the G₃ Schools.

Schools. The Profesor fancies he has affign'd the true Reason, why all heavy Bodies tend down-ward, why Amber will draw Feathers and Straws, and the Load-Stone draw Iron, when he tells you, that this is done by certain gravitating and attractive Qualities, which proceed from the substantial Forms of those various Bodies. He imagines that he has explain'd why the Loadstone's * North Pole, shall repel the North End of a magnetick Needle, and attract the South, when he affirms, that this is done by its Sympathy with one End of it, and its Antipathy against the other End. Whereas in truth, all these Names of Sympathy, Antipathy, substantial Forms and Qualities, when they are put for the Causes of these Effects in Bodies, are but hard Words, which only express a learned and pompous Ignorance of the true Cause of natural Appearances; and in this Sense they are meer Words without Ideas.

This will evidently appear, if one ask me, why a concave Mirrour or convex Glass will burn Wood in the Sun-Beams, or why a Wedge will cleave it? and I should tell him, it is by an ustorious Quality in the Mirrour or Glass, and by a cleaving Power in the Wedge, arising from a certain unknown substantial Form in them, whence they derive these Qualities; or if he should ask me why a Clock strikes, and points to the Hour, and I should say, it is by an indicating Form and sonoriste Quality; whereas, I ought to tell him how the Sun-Beams are collected and united by a burning Glass; whence the mechanical Force of a Wedge is deriv'd; and what are the Wheels and Springs, the Pointer, and Hammer, and Bell, whereby a

^{*} Note, Some Writers call that the South-Pole of a Loadstone which attracts the South-End of the Needle; but I chuse to tokow those who call it the North-Pole.

Clock gives Notice of the Time, both to the Eye and the Ear. But these ustorious and cleaving Powers, sonorous and indicating Forms and Qualities, do either teach the Enquirer nothing at all but what he knew before, or they are meer Words without Ideas *.

And there is many a Man in the vulgar and in the learned World, who imagines himself deeply skilled in the Controversies of Divinity, whereas, he has only furnished himself with a Parcel of scholastick or mystick Words, under some of which the Authors themselves had no just Ideas, and the Learner when he hears, or pronounces them, hath scarce any Ideas at all. Such fort of Words sometimes have become Matters of immortal Contention, as tho' the Gospel could not stand without them; and yet the Zealot perhaps knows little more of them than he does of Shibboleth, or Higgaion, Selah, Judg. xii. 6. Psal. ix. 16.

Yet here I would lay down this Caution, that there are several Objects of which we have not a clear and distinct Idea, much less an adequate or comprehensive one, and yet we cannot call the Names of these Things Words without Ideas; fuch are the Infinity and Eternity of God himself,

^{*} It may be objected here, "And what does the modern Philosopher, "with all his Detail of mathematical Numbers and Diagrams do more " than this toward the Solution of these Difficulties? Does he not describe "Gravity by a certain unknown Force, whereby Bodies tend downward to the "Centre? Hath he found the certain and mechanical Reasons of Attraction, "Magnetism, &c.?" I Answer, That the Moderns have found a thousand Things, by applying Mathematicks to natural Philosophy, which the Antients were ignorant of; and when they use any Names of this Kind, viz. Gravitation, Attraction, &c. they use them only to signify, that there are such Effects and such Causes, with a frequent Confession of their Ignorance of the true Springs of them: They do not pretend to make these Words stand for the real Carf's of Things, as tho' they thereby assigned the true philosophical Solution of these Difficulties; for in this Sense they will still be Words without Ideas, whether in the Mouth of an old Philosopher or a men one,

the Union of our own Soul and Body, the Union of the divine and human Natures in Jesus Christ, the Operation of the holy Spirit on the Mind of Man, &c. These ought not to be call'd Words without Ideas, for there is sufficient Evidence for the Reality and Certainty of the Existence of their Objects, tho' there is some Confusion in our clearest Conceptions of them; and our Ideas of them, tho' impersect, are yet sufficient to converse about them, so far as we have Need, and to determine so much as is necessary for our own Faith and Practice.

Direct. II. Do not suppose that the Natures or Essences of Things always differ from one another, as much as their Names do. There are various Purposes in human Life, for which we put very different Names on the same Thing, or on Things whose Natures are near akin; and thereby oftentimes, by making a new nominal Species, we are ready to deceive our selves with the Idea of another real Species of Beings: And those whose Understandings are led away by the meer Sound of Words, fancy the Nature of those Things to be very different, whose Names are so, and judge of them accordingly.

I may borrow a remarkable Instance for my Purpose almost out of every Garden, which contains a Variety of Plants in it. Most or all Plants agree in this, that they have a Root, a Stalk, Leaves, Buds, Blossoms and Seeds: But the Gardiner ranges them under very different Names, as they were really different Kinds of Beings, meerly because of the different Use and Service to which they are applied by Men: As for Instance, those Plants whose Roots are eaten shall appropri-

ate the Name of Roots to themselves; such are Carrots, Turnips, Radishes, &c. If the Leaves are of chief Use to us, then we call them Herbs; as Sage, Mint, Thyme: If the Leaves are eaten raw, they are termed Sallad; as Lettuce, Purslain: If boiled, they become Pot-herbs; as Spinage, Coleworts; and some of those same Plants, which are Pot-berbs in one Family, are Sallad in another. If the Buds are made our Food, they are call'd Heads, or Tops; so Cabbage Heads, Heads of Asparagus and Artichoaks. If the Bloffom be of most Importance, we call it a Flower; fuch are Daisies, Tulips and Carnations, which are the meer Blossoms of those Plants. If the Husk or Seeds are eaten, they are call'd the Fruits of the Ground, as Pease, Beans, Strawberries, &c. If any Part of the Plant be of known and common Use to us in Medicine, we call it a physical Herb, as Carduus, Scurvy-grass; but if we count no Part useful, we call it a Weed, and throw it out of the Garden; and yet perhaps our next Neighbour knows some valuable Property and Use of it; he plants it in his Garden, and gives it the Title of an Herb or a Flower. You see here how small is the real Distinction of these several Plants, consider'd in their general Nature as the lesser Vegetables; yet what very different Ideas we vulgarly form concerning them, and make different Species of them, chiefly because of the different Names given them.

Now when Things are fet in this clear Light, it appears how ridiculous it would be for two Persons to contend, whether Dandelion be a Herb or a Weed; whether it be a Pot-herb or Sallad; when by the Custom or Fancy of different Families, this one Plant obtains all these Names, according cording to the several Uses of it, and the Value

that is put upon it.

Note here, that I find no Manner of Fault with the Variety of Names which are given to several Plants, according to the various Uses we make of them. But I would not have our Judgments impos'd upon hereby, to think that these meer nominal Species, viz. Herbs, Sallad and Weeds become three really different Species of Beings, on this Account, that they have different Names and

Uses. But I proceed to other Instances.

It has been the Custom of Mankind, when they have been angry with any Thing, to add a new ill Name to it, that they may convey thereby a hateful Idea of it; tho' the Nature of the Thing still abides the same. So the Papists call the Protestants Hereticks: A prophane Person calls a Man of Piety, a Precision: And in the Times of the Civil War in the last Century, the Royalists call'd the Parliamentarians, Fanaticks, Roundheads and Sectaries: And they in Requital call'd the Royalists, Malignants: But the Partizans on each fide were really neither better nor worse for these Names.

It has been also a frequent Practice on the other Hand, to put new favourable Names upon ill Ideas, on purpose to take off the Odium of them. But notwithstanding all these flattering Names and Titles, a Man of profuse Generosity is but a Spendthrift; a natural Son is a Bastard still; a Gallant is an Adulterer, and a Lady of Pleasure is a Whore.

Direct. III. Take Heed of believing the Nature and Essence of two or more Things to be certainly the fame, because they may have the same Name given them. This has been an unhappy and fatal Occafion

sion of a thousand Mistakes in the natural, in the civil, and in the religious Affairs of Life, both amongst the Vulgar and the Learned. I shall give two or three Instances, chiefly in the Matters of Natural Philosophy, having hinted several Dangers of this Kind, relating to Theology in the forego-

ing Discourse concerning Equivocal Words.

Our elder Philosophers have generally made use of the Word Soul to fignify that Principle whereby a Plant grows, and they call'd it the vege-tative Soul: The Principle of the animal Motion of a Brute has been likewise call'd a Soul, and we have been taught to name it the fensitive Soul: They have also given the Name Soul to that superior Principle in Man, whereby he thinks, judges, reasons, &c. and tho' they distinguished this by the honourable Title of the rational Soul, yet in common Discourse and Writing we leave out the Words vegetative, sensitive and rational; and make the Word Soul ferve for all these Principles: Thence we are led early into this Imagination, that there is a fort of spiritual Being in Plants and in Brutes, like that in Men. Whereas, if we did but abstract and separate these Things from Words, and compare the Cause of Growth in a Plant, with the Cause of Reasoning in Man (without the Word Soul) we should never think that these two Principles were at all like one another; nor should we perhaps so easily and peremptorily conclude, that Brutes need an intelligent Mind to perform their animal Actions.

Another Instance may be the Word Life, which being attributed to Plants, to Brutes, and to Men, and in each of them ascrib'd to the Soul, has very easily betray'd us from our Infancy into this Mislake, that the Spirit, or Mind, or thinking Principle in Man, is the Spring of vegetative

and

and animal Life to his Body: Whereas it is evident, that if the Spirit or thinking Principle of Man gave Life to his animal Nature, the Way to fave Men from dying would not be to use Medicines, but to perfuade the Spirit to abide in the

Body.

I might derive a third Instance from the Word HEAT; which is us'd to fignify the Sensation we have when we are near the Fire, as well as the Cause of that Sensation which is in the Fire it felf; and thence we conclude from our Infancy, that there is a fort of Heat in the Fire resembling our own Sensation, or the Heat which we feel: Whereas in the Fire there is nothing but little Particles of Matter, of such particular Shapes, Sizes, Situations and Motions, as are fitted to impress such Motions on our Flesh or Nerves as excite the Sense of Heat. Now if this Cause of our Sensation in the Fire had been always call'd by a distinct Name, perhaps we had not been so rooted in this Mistake, that the Fire is hot with the same sort of Heat that we feel. This will appear with more Evidence, when we confider that we are secure from the same Mistake where there have been two different Names allotted to our Sensation, and to the Cause of it; as, we do not fav, Pain is in the Fire that burns us, or in the Knife that cuts and wounds us; for we call it burning in the Fire, cutting in the Knife, and Pain only, when it is in our selves.

Numerous Instances of this Kind might be de-.riv'd from the Words sweet, sour, loud, shrill, and almost all the sensible Qualities, whose real Natures we mistake from our very Infancy, and we are ready to suppose them to be the same in us, and in the Bodies that cause them; partly, because the Words, which fignify our own Sensations, are applied also to signify those unknown Shapes and Motions of the little Corpuscles which excite and cause those Sensations.

Direct. IV. In Conversation or Reading be diligent to find out the true Sense, or distinct Idea, which the Speaker or Writer affixes to his Words; and especially to those Words which are the chief Subject of his Discourse. As far as possible take heed, lest you put more or sewer Ideas into one Word, than the Person did when he wrote or spoke; and endeavour that your Ideas of every Word may be the same as his were: Then you will judge better of what he speaks or writes.

It is for want of this that Men quarrel in the Dark; and that there are so many Contentions in the several Sciences, and especially in *Divinity*. Multitudes of them arise from a Mistake of the true Sense or compleat Meaning, in which Words are us'd by the Writer or Speaker; and hereby sometimes they seem to agree, when they really differ in their Sentiments; and sometimes they seem to differ when they really agree. Let me give an Instance of both.

When one Man by the Word Church shall understand all that believe in Christ; and another by the Word Church means only the Church of Rome; they may both assent to this Proposition, There is no Salvation out of the Church, and yet their inward Sentiments may be widely different.

Again, if one Writer shall affirm that Virtue added to Faith is sufficient to make a Christian, and another shall as zealously deny this Proposition, they seem to differ widely in Words, and yet perhaps they may both really agree in Sentiment: If by the Word Virtue, the Affirmer intends our

whole

whole Duty to God and Man; and the Denier by the Word Virtue means only Courage, or at most our Duty toward our Neighbour, without including in the Idea of it the Duty which we owe to God.

Many such fort of Contentions as these are, if traced to their Original, will be found to be meer Logomachys, or Strifes and Quarrels about Names and Words, and vain Janglings, as the Apostle calls them in his first Letter of Advice to Ti-

mothy.

In order therefore to attain clear and distinct Ideas of what we read or hear, we must search the Sense of Words; we must consider what is their Original and Derivation in our own or foreign Languages; what is their common Sense amongst Mankind, or in other Authors, especially fuch as wrote in the same Country, in the same Age, about the same Time, and upon the same Subjects: We must consider in what Sense the same Author uses any particular Word or Phrase, and that when he is discoursing on the same Matter, and especially about the same Parts or Paragraphs of his Writing: We must consider whether the Word be used in a strict and limited, or in a large and general Sense; whether in a literal, in a figurative, or in a prophetick Sense; whether it has any fecondary Idea annext to it besides the primary or chief Sense. We must enquire farther, what is the Scope and Design of the Writer; and what is the Connection of that Senrence with those that go before it, and those which follow it. By these and other Methods we are to fearch out the Definition of Names, i.e. the true Sense and Meaning in which any Author or Speaker uses any Word, which may be the chief Subject

of Discourse, or may carry any considerable Importance in it.

Direct. V. When we communicate our Notions to others, meerly with a Design to inform and improve their Knowledge, let us in the beginning of our Discourse take Care to adjust the Definition of Names wheresoever there is need of it; that is, to determine plainly what we mean by the chief Words which are the Subject of our Discourse; and be sure always to keep the same Ideas, when soever we use the same Words, unless we give due Notice of the Change. This will have a very large and happy Influence, in securing not only others but our selves too from Confusion and Mistake; for even Writers and Speakers themselves, for want of due Watchfulness, are ready to affix different Ideas to their own Words, in different Parts of their Discourses, and hereby bring Perplexity into their own Reasonings, and confound their Hearers.

It is by an Observation of this Rule, that Mathematicians have so happily secured themselves, and the Sciences which they have profest, from Wrangling and Controversy; because whensoever in the Progress of their Treatises they have Occasion to use a new and unknown Word, they always define it, and tell in what Sense they shall take it; and in many of their Writings you find a heap of Definitions at the very beginning. Now if the Writers of natural Philosophy and Morality had us'd the fame Accuracy and Care, they had effectually feeluded a Multitude of noity and fruitless Debates out of their several Provinces: Nor had that facred Theme of Divinity been perplexed with so many intricate Disputes, nor the Church of Christ been torn to pieces by so many Sects and Factions, if the Words Grace, Faith, Righteou/ne/sa ousness, Repentance, Justification, Worship, Church, Bishop, Presbyter, &c. had been well defined, and their Significations adjusted, as near as possible, by the Use of those Words in the new Testament; or at least, if every Writer had told us at first in what Sense he would use those Words.

Direct. VI. In your own Studies, as well as in the Communication of your Thoughts to others, meerly for their Information, avoid ambiguous and equivocal Terms as much as possible. Do not use such Words as have two or three Definitions of the Name belonging to them, i.e. such Words as have two or three Senses, where there is any Danger of Mistake. Where your chief Business is to inform the Judgment, and to explain a Matter, rather than to persuade or affect, be not fond of expressing your selves in figurative Language, when there are any proper Words that signify the same Idea in their literal Sense. It is the Ambiguity of Names, as we have often said, that brings almost infinite Consusion into our Conceptions of Things.

But where there is a Necessity of using an ambiguous Word, there let double Care be us'd in defining that Word, and declaring in what Sense you take it. And be sure to suffer no ambiguous

Word ever to come into your Definitions.

Direct. VII. In communicating your Notions, use every Word as near as possible in the same Sense in which Mankind commonly uses it; or which Writers that have gone before you have usually affect to it, upon Condition that it is free from Ambiguity. Tho' Names are in their Original meerly arbitrary, yet we should always keep to the establish'd Meaning of them, unless great Necessity require the Alteration;

teration; for when any Word has been us'd to fignify an Idea, that old Idea will recur in the Mind when the Word is heard or read, rather than any new Idea which we may fasten to it. And this is one Reason why the received Definitions of Names should be chang'd as little as possible.

But I add farther, that tho' a Word entirely new, introduced into a Language, may be affixed to what Idea you please, yet an old Word ought never to be fixt to an unaccustomed Idea, without just and evident Necessity, or without present or previous Notice, lest we introduce thereby a License for all manner of pernicious Equivocations and Falshoods; as for Instance, when an idle Boy who has not feen his Book all the Morning shall tell his Master that he has learnt his Lesfon, he can never excuse himself by saying, that by the Word Lesson he meant his Breakfast, and by the Word learn he meant eating; furely this would be construed a downright Lye, and his funcied Wit would hardly procure his Pardon.

In using an ambiguous Word which has been us'd in different Senses, we may chuse what we think the most proper Sense, as I have done p. 86. in naming the Poles of the Loadstone, North or South.

And when a Word has been us'd in two or three Senses, and has made a great Inroad for Error upon that account, it is of good Service to drop one or two of those Senses, and leave it only one remaining, and affix the other Senses or Ideas to other Words. So the modern Philosophers, when they treat of the human Soul, they call it the Mind or Mens Humana, and leave the Word Anima or Soul to fignify the Principle of Life and Motion in meer animal Beings.

The

The Poet Juvenal has long ago given us a hint of this Accuracy and Distinction when he says of Brutes and Men,

Indulfit mundi communis Conditor illis Tantum Animas; nobis Animum quoque. Sat. xvi. v. 134.

Exception. There is one Case wherein some of these last Rules concerning the Definition of Words may be in some Measure dispensed with; and that is, when firong and rooted Prejudice hath eftablished some favourite Word or Phrase, and long us'd it to express some mistaken Notion, or to unite some inconsistent Ideas; for then it is sometimes much easier to lead the World into Truth by indulging their Fondness for a Phrase, and by affigning and applying new Ideas and Notions to their favourite Word; and this is much fafer also than to awaken all their Passions by rejecting both their old Words, and Phrases, and Notions, and introducing all new at once: Therefore we continue to fay, There is Heat in the Fire, there is Coldness in Ice, rather than invent new Words to express the Powers which are in Fire or Ice, to excite the Sensations of Heat or Cold in us. the same Reason some Words and Phrases which are less proper may be continued in Theology, while People are led into clearer Ideas with much more Ease and Success, than if an Attempt were made to change all their beloved Forms of Speech.

In other Cases these logical Directions should generally be observed, and different Names affixt

to different Ideas.

Here I cannot but take Occasion to remark, that it is a considerable Advantage to any Language to have a Variety of new Words introduced into

into it, that when in Course of Time new Objects and new Ideas arise, there may be new Words and Names assign'd to them: And also where one single Name has sustain'd two or three Ideas in Time past, these new Words may remove the Ambiguity by being affixt to some of those Ideas. This Practice would by Degrees take away part of the Uncertainty of Language. And for this Reason I cannot but congratulate our English Tongue, that it has been abundantly inriched with the Translation of Words from all our neighbour Nations, as well as from antient Languages, and these Words have been as it were enfranchifed amongst us; for French, Latin, Greek and German Names will fignify English Ideas, as well as Words that are antiently and intirely English.

It may not be amiss to mention in this Place, that as the Determination of the particular Sense in which any Word is us'd is call'd the Definition of the Name, so the Enumeration of the various Senses of any equivocal Word is sometimes call'd the Division or Distinction of the Name; and for this Purpose good Dictionaries are of excellent

Use.

This Distinction of the Name or Word is greatly necessary in Argumentation or Dispute; when a fallacious Argument is us'd, he that answers it distinguishes the several Senses of some Word or Phrase in it, and shews in what Sense it is true and in what Sense it is as evidently false.

SECT. IV.

Of the Definition of Things.

S there is much Confusion introduced into our Ideas, by the Means of those Words to which they are affix'd; so the mingling our Ideas with each other without Caution, is a farther Occasion whereby they become confus'd. A Court-Lady, born and bred up amongst Pomp and Equipage, and the vain Notions of Birth and Quality, constantly joins and mixes all these with the Idea of her felf, and the imagines thefe to be effential to her Nature, and as it were necessary to her Being; thence she is tempted to look upon menial Servants, and the lowest Rank of Mankind, as another Species of Beings quite distinct from her felf. A Plough Boy that has never travelled beyond his own Village, and has feen nothing but thatch'd Houses and his Parish-Church, is naturally led to imagine that Thatch belongs to the very Nature of a House, and that that must be a Church which is built of Stone, and especially if it has a Spire upon it. A Child whose Uncle has been exceffive fond, and his Schoolmaster very severe, easily believes that Fondness always belongs to Uncles, and that Severity is effential to Masters or Instructors. He has seen also Soldiers with red Coats, or Ministers with long black Gowns, and therefore he persuades himself that these Garbs are essential to the Characters, and that he is not a Minister who has not a long black Gown, nor can he be a Soldier who is not dress'd in red. It would be well if all fuch Mistakes ended with Childhood.

It might be also subjoin'd, that our complex Ideas become confus'd, not only by uniting or blending together more simple or single Ideas than really belong to them, as in the Instances just mentioned; but Obscurity and Confusion sometimes come upon our Ideas also, for want of uniting a fufficient Number of fingle Ideas to make the compiex one: So if I conceive of a Leopard only as a spotted Beast, this does not distinguish it from a Tyger or a Lynx, nor from many Dogs or Horses, which are spotted too; and therefore a Leopard must have some more Ideas added to compleat and distinguish it.

I grant that it is a large and free Acquaintance with the World, a watchful Observation and diligent Search into the Nature of Things that must fully correct this kind of Errors: The Rules of Logick are not fufficient to do it: But yet the Rules of Logick may instruct us by what means to diffinguish one Thing from another, and how to fearch and mark out as far as may be the Contents and Limits of the Nature of distinct Beings, and thus may give us great Assistance towards the Remedy of these Mistakes.

As the Definition of Names frees us from that Confusion which Words introduce, so the Definition of Things will in some Measure guard us against that Confusion which mingled Ideas have introduced: For as a Definition of the Name explains what any Word means, so a Definition of the Thing explains what is the Nature of that Thing.

In order to form a Definition of any Thing we must put forth these three Acts of the Mind.

1st, Compare the Thing to be defin'd with other Things that are most like to it self, and see H 3

wherein its Essence or Nature agrees with them; and that is call'd the general Nature or Genus in a Definition: So if you would define what Wine is, first compare it with other Things like it self, as Cyder, Perry, &c. and you will find it agrees essentially with them in this, that it is a fort of Frice.

2^{dly}, Confider the most remarkable and primary Attribute, Property, or Idea wherein this Thing differs from those other Things that are most like it; and that is its essential or specifick Difference: So Wine differs from Cyder and Perry, and all other Juices, in that it is pressed from a Grape. This may be call'dits special Nature, which distinguishes it from other Juices.

3^{dly}, Join the general and special Nature together, or (which is all one) the Genus and the Difference, and these make up a Definition. So the Juice of a Grape, or Juice prest from Grapes is the

Definition of Wine.

So if I would define what Winter is, I consider first wherein it agrees with other Things which are most like it, (viz.) Summer, Spring, Autumn, and I find they are all Seasons of the Year; therefore a Season of the Year is the Genus. Then I observe wherein it differs from these, and that is in the Shortness of the Days; for it is this which does primarily diffinguish it from other Seasons; therefore this may be call'dits special Nature or its Difference. Then by joining these together I make a Definition. Winter is that Season of the Year wherein the Days are shortest. I confess indeed this is but a ruder Definition of it, for to define it as an accurate Astronomer I must limit the Days, Hours and Minutes.

After the fame manner if we would explain or define what the Pisture of a Man is, we confider

first

first the Genus or general Nature of it, which is a Representation; and herein it agrees with many other Things, as a Statue, a Shadow, a Print, a verbal Description of a Man, &c. Then we confider wherein it differs from these, and we find it differs from a verbal Description in that it is a Representation to the Eye and not to the Ear: It differs from a Statue in that it is a Representation upon a flat Surface, and not in a folid Figure: It differs from a Shadow in that it is an abiding Representation and not a fleeting one: It differs from a Print or Draught, because it represents the Colours by Paint as well as the Shape of the Object by Delineation. Now so many, or rather so few of these Ideas put together, as are just sufficient to distinguish a Piëture from all other Representations, make up its effential Difference or its /pecial Nature; and all these are included in its being painted on a plain Surface. Then join this to the Genus, which is a Representation; and thus you have the compleat Definition of the Picture of a Man, viz. it is the Representation of a Man in Paint upon a Surface or a Plane.

Here it must be observed, that when we speak of the Genus and Difference as composing a Desinition, it must always be understood that the nearest Genus and the specifick Difference are re-

quired.

The next general Nature or the nearest Genus must be us'd in a Definition, because it includes all the rest; as if I would define Wine, I must say Wine is a Juice, which is the nearest Genus; and not say, Wine is a Liquid, which is a remote general Nature; or Wine is a Substance, which is yet more remote; for Juice includes both Substance and Liquid. Besides, neither of these two remote general Natures would make H 4

any Distinction betwixt Wine and a thousand other Substances, or other Liquids; a remote Genus.

leaves the Thing too much undistinguish'd.

The specifick Difference is that primary Attribute which distinguishes each Species from one another, while they stand ranked under the same general Nature or Genus. Tho' Wine differs from other Liquids in that it is the Juice of a certain Fruit, yet this is but a general or generick Difference, for it does not distinguish Wine from Cyder or Perry; the Specifick Difference of Wine therefore is its Pressure from the Grape, as Cyder is press'd from Apples, and Perry from Pears.

In Definitions also we must use the primary Attribute that distinguishes the Species or special Nature, and not attempt to define Wine by its particular Tastes, or Effects, or other Properties, which are but secondary or consequential, when its Pressure from the Grape is the most obvious and primary Distinction of it from all other Juices. I confess in some Cases it is not so easily known which is the primary Idea that distinguishes one Thing from another; and therefore some would as foon define Winter by the Coldness of the Seafon, as by the Shortness of the Days; the' the Shortness of the Days is doubtless the most just, primary and philosophical Difference betwixt that and the other Seasons of the Year, fince Winter Davs are always shortest, but not always the coldest: I add also, that the Shortness of the Days is one Cause of the Coldness, but the Cold is no Cause of their Shortness.

SECT. V.

Rules of Definition of the Thing.

HE special Rules of a good Definition are these:

Rule I. A Definition must be universal, or as some call it, adequate; that is, it must agree to all the particular Species or Individuals that are included under the same Idea; so the Juice of a Grape agrees to all proper Wines, whether Red, White, French, Spanish, Florence, &c.

Rule II. It must be proper and peculiar to the Thing defined, and agree to that alone; for it is the very Defign of a Definition effectually to distinguish one Thing from all others: So the Juice of a Grape agrees to no other Substance, to no other

Liquid, to no other Being but Wine.

These two Rules being observ'd, will always render a Definition reciprocal with the Thing defined; which is a scholastick Way of speaking, to fignify that the Definition may be us'd in any Sentence in the Place of the Thing defined, or they may be mutually affirmed concerning each other, or substituted in the room of each other. The Juice of the Grape is Wine, or Wine is the Juice of the Grape. And wherefoever the Word Wine is us'd, you may put the Juice of the Grape instead of it, except when you consider Wine rather as a Word than a Thing, or when it is mention'd in fuch logical Rules.

Rule

Rule III. A Definition ought to be clear and plain; for the Defign of it is to lead us into the Know-

ledge of the Thing defined.

Hence it will follow that the Words us'd in a Definition ought not to be doubtful, and equivo-cal, and obscure, but as plain and easy as the Language will afford: And indeed it is a general Rule concerning the Definition both of Names and Things, that no Word should be us'd in either of them which has any Darkness or Difficulty in it, unless it has been before explain'd or defin'd.

Hence it will follow also, that there are many Things cannot well be defin'd either as to the Name or the Thing, unless it be by synonymous Words, or by a Negation of the contrary Idea, &c. for learned Men know not how to make them more evident or more intelligible than the Ideas which every Man has gained by the vulgar Methods of teaching. Such are the Ideas of Extension, Duration, Thought, Consciousness, and most of our simple Ideas, and particularly sensible Qualities, as White, Blue, Red, Cold, Heat, Shrill, Bitter, Sour, &c.

We can fay of Duration that it is a Continuance in Being, or a not ceasing to be; we can fay of Consciousness, that it is as it were a feeling within our selves; we may say Heat is that which is not Cold; or Sour is that which is like Vinegar; or we may point to the clear Sky, and say that is Blue. These are the vulgar Methods of teaching the Definitions of Names, or Meaning of Words. But there are some Philosophers whose Attempt to define these Things learnedly have wrapt up their Ideas in greater Darkness, and exposed themselves to Ridicule and Contempt; as when they define Heat they say, it is Qualitas congregans be-

C.VI.S. 5. The right Use of Reason. 107 mogenea & segregans beterogenea, i. e. a Quality gathering together Things of the same Kind, and separating Things of a different Kind. So they define White, a Colour arising from the Prevalence of Brightness: But every Child knows Hot and White better without these Definitions.

There are many other Definitions given by the peripatetick Philosophers, which are very faulty by Reason of their Obscurity; as Motion is defined by them the Act of a Being in Power so far forth as it is in Power. Time is the Measure or Number of Motion according to past, present and future. The Soul is the Act of an organical natural Body, having Life in Power; and several others of the same Stamp.

Rule IV. It is also commonly prescribed as mongst the Rules of Definition, that it should be short, so that it must have no Tautology in it, nor any Words superstuous. I confess Desinitions ought to be express'd in as few Words as is consistent with a clear and just Explication of the Nature of the Thing defin'd, and a Distinction of it from all other Things beside: But it is of much more Importance, and far better, that a Definition should explain clearly the Subject we treat of, tho' the Words be many, than to leave Obscurities in the Sentence, by confining it within too narrow Limits. So in the Definition which we have given of Logick, that it is the Art of using Reason well in the Search after Truth and the Communication of it to others, it has indeed many Words in it, but it could not well be shorter. Art is the Genus wherein it agrees with Rhetorick, Poely, Arithmetick, Wreftling, Sailing, Building, &c. for all these are Arts also: But the Difference or special Nature of it is drawn from its Object, Realon; fon; from the Act using it well, and from its two great Ends or Designs, viz. the Search of Truth, and the Communication of it: Nor can it be justly described and explained in sewer Ideas.

V. If we add a fifth Rule, it must be that neither the Thing defined, nor a meer synonymous Name should make any part of the Definition, for this would be no Explication of the Nature of the Thing; and a synonymous Word at best could only be a Definition of the Name.

SECT. VI.

Observations concerning the Definition of Things.

Before I part with this Subject I must propose several Observations which relate to the De-

finition of Things.

we should be confined to one single Attribute or Property, in order to express the Difference of the Thing defined, for sometimes the essential Difference consists in two or three Ideas or Attributes. So a Grocer is a Man who buys and sells Sugar and Plums and Spices for Gain. A Clock is an Engine with Weights and IV heels, that shews the Hour of the Day both by pointing and striking: And if I were to define a Repeating Clock I must add another Property, viz. that it also repeats the Hour. So that the true and primary essential Difference of some complex Ideas consisting in several distinct Properties cannot be well express'd without conjunctive Particles of Speech.

2d Observ. There is no need that Definitions should always be positive, for some Things differ from others meerly

meerly by a Defect of what others have; as if a Chair be defined a Seat for a single Person with a Back belonging to it, then a Stool is a Seat for a single Person without a Back; and a Form is a Seat for several Persons without a Back: These are negative Differences. So Sin is a want of Conformity to the Law of God; Blindness is a want of Sight. A Vagabond is a Person without a Home. Some Ideas are negative, and their Definitions ought to be so too.

3^d Observ. Some Things may have two or more Definitions, and each of them equally just and good; as a Mile is the Length of eight Furlongs, or it is the third part of a League. Eternal is that which ever was and ever shall be; or it is that which had no Beginning and shall have no End. * Man is usually defined a rational Animal: But it may be much better to define him a Spirit united to an Animal of such a Shape, or an Animal of such a peculiar Shape united to a Spirit, or a Being composed of such an Animal and a Mind.

evident, and clearly distinct from each other, there we may be more exact and accurate in the Definitions of them: But where their Essences approach nearer to each other, the Definition is more dissiputed. A Bird may be defined a feathered Animal with Wings, a Ship may be defined a large hollow Building made to pass over the Sea with Sails: But if you ask me to define a Batt, which is between a Bird and a Beast, or to define a Barge and Hoy,

^{*}The common Definition of Man, vix. a rational Animal, is very faulty, r. Because the Animal is not rational; the Rationality of Man arises from the Mind to which the Animal is united. 2. Because if a Spirit should be united to a Horse and make it a rational Being, surely this would not be a Man: It it evident therefore that the peculiar Shape must enter into the Definition of a Man to render it just and perfect; and for want of a sull Description thereof all our Definitions are desective.

which are between a Boat and a Ship, it is much harder to define them, or to adjust the Bounds of their Essence. This is very evident in all monstrous Births and irregular Productions of Nature, as well as in many Works of Art, which partake so much of one Species and so much of another, that we cannot tell under which Species to rank them, or how to determine their specifick Difference.

The several Species of Beings are seldom pre-

cifely limited in the Nature of Things by any certain and unalterable Bounds: The Essences of many Things do not confift in indivisibili, or in one evident indivisible Point, as some have imagined; but by various Degrees they approach nearer to, or differ more from others that are of a Kindred Nature. So (as I have hinted before) in the very middle of each of the Arches of a Rainbow the Colours of green, yellow and red are sufficiently distinguished; but near the Borders of the several Arches they run into one another, so that you hardly know how to limit the Colours, nor whether to call it red or yellow, green or bluc.

5th Observ. As the highest or chief Genus's, viz. Being and Not-Being can never be defined, because there is no Genus superior to them; so neither can singular Ideas or Individuals be well defined, because either they have no essential Differences from other Individuals, or their Differences are not known; and therefore Individuals are only to be describ'd by their particular Circumstances: So King George is distinguish'd from all other Men and other Kings, by describing him as the first King of Great Britain of the House of Brunswick: and Westminster-Hall is described by its Situation and its Use, &c.

That individual Bodies can hardly have any efsential Difference, at least within the Reach of our Knowledge, may be made thus to appear; Methuselah, when he was nine hundred and fixty Years old, and perhaps worn out with Age and Weakness, was the same Person as when he was in his full Vigour of Manhood, or when he was an Infant newly born; but how far was his Body thesame? who can tell whether there was any Fibre of his Flesh or his Bones that continued the same throughout his whole Life? or who can determine which were those Fibres? The Ship in which Sir Francis Drake sailed round the World might be new built and refitted fo often, that few of the same Timbers remained; and who can fay whether it must be call'd the same Ship or no? and what is its effential Difference? How shall we define Sir Francis Drake's Ship, or make a Definition for Methuselah?

To this Head belongs that most difficult Question, What is the Principle of Individuation? or what is it that makes any one Thing the same as it was sometime before? This is too large and laborious an Enquiry to dwell upon it in this Place: Yet I cannot forbear to mention this Hint, viz. Since our own Bodies must rise at the last Day for us to receive Rewards or Punishments in them, there may be perhaps some original Fibres of cach human Body, some Stamina Vita, or primeval Seeds of Life, which may remain unchanged thro' all the Stages of Life, Death and the Grave; these may become the Springs and Principles of a Resurrection, and sufficient to denominate it the same Body. But if there be any such constant and vital Atoms which distinguish every human Body, they are known to God only.

6th Observ. Where we cannot find out the E/sence or essential Difference of any Species or Kind of Beings that we would define, we must content our felves with a Collection of such chief Parts or Properties of it as may best explain it io far as it is known, and best distinguish it from other Things: So a Marigold is a Flower which hath fo many long yellow Leaves round a little Knot of Seeds in the midst with such a peculiar Stulk, &c. So if we would define Silver, we fay it is a white and hard Metal, next in Weight to Gold: If we would define an Elder-Tree, we might say it is one among the leffer Trees, whose younger Branches are soft and full of Pith, whose Leaves are jagged or indented, and of such a particular Shape, and it bears large Clusters of small black Berries: So we must define Water, Earth, Stone, a Lion, an Eagle, a Serpent, and the greatest Part of natural Beings, by a Collection of those Properties, which according to our Observation distinguish them from all other Things. This is what Mr. Locke calls nominal Essences, and nominal Definitions. And indeed fince the essential Differences of the various natural Beings or Bodies round about us arise from a peculiar Shape, Size, Motion and Situation of the small Particles of which they are compos'd, and fince we have no sufficient Method to inform us what these are, we must be contented with fuch a fort of Definition of the Bodies they compose.

Here note that this fort of Definition, which is made up of a meer Collection of the most remarkable Parts or Properties, is call'd an imperfett Definition, or a Description; whereas the Definition is call'd perfett when it is compos'd of the effection of the general Nature or

Genus.

7th Observ. The perfett Definition of any Being always includes the Definition of the Name whereby it is called, for it informs us of the Sense or Meaning of that Word, and shews us what Idea that Word is affixed to: But the Definition of the Name does by no means include a perfect Definition of the Thing; for as we have faid before, a meer synonymous Word, a Negation of the contrary, or the mention of any one or two distin-guishing Properties of the Thing may be a sufficient Definition of the Name. Yet in those Cases where the essential Difference or Essence of a Thing is unknown, there a Definition of the Name by the chief Properties, and a Description of the Thing are much the same.

And here I think it necessary to take Notice of one general Sentiment that feems to run thro' that excellent Performance, Mr. Locke's Estay of Human Understanding, and that is, "That the Essences of Things are utterly unknown to us, and therefore all our Pretences to distin-" guish the Essences of Things can reach no far-"ther than meer nominal Essences, or a Collection of fuch Properties as we know; to some of which we affix particular Names, and others "we bundle up, several together, under one "Name: And that all our Attempts to rank Be-" ings into different Kinds or Species's can reach on of farther than to make meer nominal Species, and therefore our Definitions of Things are but meer nominal Descriptions or Definitions of the " Name.

Now that we may do Justice to this great Author, we ought to confider that he confines this Sort of Discourse only to the Essence of simple Ideas, and to the Essence of Substances, as appears evident in the fourth and fixth Chapters of his Third Book: for he allows the Names of mixed Modes always to signify the real Essences of their Species, Chap. V. and he acknowledges artificial Things to have distinct Species; and that in the Distinction of their Essences there is generally less Confusion and Uncertainty than in natural, Ch. VI. Sect. 40, 41. tho' it must be confess'd that he scarce makes any Distinction between the Definition of the Name and the Definition of the Thing, as Ch. IV. And sometimes the Current of his Discourse decries the Knowledge of Essences in such general Terms as may justly give Occasion to mistake.

It must be granted, that the Essence of most of our simple Ideas and the greatest part of particular natural Substances are much unknown to us; and therefore the essential Differences of sensible Qualities and of the various Kinds of Bodies, (as I have said before) lye beyond the Reach of our Understandings: We know not what makes the primary real inward Distinction between Red, Green, Sweet, Sour, &c. between Wood, Iron, Oil, Stone, Fire, Water, Flesh, Clay, in their general Natures, nor do we know what are the inward and prime Distinctions between all the particular Kinds or Species in the Vegetable, Animal, Mineral, Metallick, or Liquid World of Things.

But still there is a very large Field for the Know-ledge of the Essences of Things, and for the Use of perfect Definitions amongst our complex Ideas, the modal Appearances and Changes of Nature, the Works of Art, the Matters of Science, and all the Assairs of the civil, the moral and the religious Life: And indeed it is of much more Importance to all Mankind to have a better Acquaintance with the Works of Art for their own Livelihood and daily Use, with the Assairs of Morality for their Behaviour

Behaviour in this World, and with the Matters of Religion, that they may be prepared for the World to come, than to be able to give a perfect Definition of the Works of Nature:

If the particular Essences of Natural Bodies are unknown to us, we may yet be good Philosophers, good Artists, good Neighbours, good Subjects and good Christians without that Knowledge, and we have just Reason to be content.

Now that the Essences of some of the modal Appearances and Changes in Nature, as well as Things of Art, Science and Morality are sufficiently known to us to make perfect Definitions of them, will appear by the Specimen of a few Definiti-

ons of these Things.

Motion is a Change of Place. Swiftness is the passing over a long Space in a short Time. A natural Day is the Time of one alternate Revolution of Light and Darkness, or it is the Duration of twenty four Hours. An Eclipse of the Sun is a Defect in the Sun's Transmission of Light to us by the Moon interposing. * Snow is congealed Vapour. * Hail is congealed Rain. An * Island is a Piece of Land rifing above the furrounding Water. An * Hill is an elevated Part of the Earth, and a * Grove is a Piece of Ground thick fet with Trees. An House is a Building made to dwell in. A Cottage is a mean House in the Country. A Supper is that Meal which we make in the Evening. A Triangle is a Figure composed of three Sides. A Gallon is a Measure containing eight Pints. A Porter is a Man who carries Burdens for Hire.

^{*} Note, Island, Hill, Grove, are not defined here in their more remote and substantial Natures, (if I may so express it) or as the Matter of them is Earth; for in this Sense we know not their Essence, but only as considered in their modal Appearances, whereby one part of Earth is distinguished from another. The same may be said of Snow, Hail, &c.

King is the chief Ruler in a Kingdom. Veracity is the Conformity of our Words to our Thoughts. Covetousness is an excessive Love of Money, or other Possessions. Killing is the taking away the Life of an Animal. Murder is the unlawful killing of a Man. Rhetorick is the Art of speaking in a manner fit to persuade. Natural Philosophy is the Knowledge of the Properties of Bodies and the various Effects of them, or it is the Knowledge of the various Appearances in Nature and their Causes; and Logick is the Art of using our Reason well, &c.

Thus you see the essential Differences of various Beings may be known, and are borrowed from their Qualities and Properties, their Causes, Effects, Objects, Adjuncts, Ends, &c. and indeed as infinitely various as the Essences of Things are, their Definitions must needs have very various Forms.

After all it must be confess'd, that many Logicians and Philosophers in the former Ages have made too great a Bustle about the Exactness of their Definitions of Things, and entered into long fruitless Controversies and very ridiculous Debates in the feveral Sciences about adjusting the Logical Formalities of every Definition; whereas that fort of Wrangling is now grown very justly contemptible, fince it is agreed that true Learning and the Knowledge of Things depends much more upon a large Acquaintance with their various Properties, Causes, Effects, Subjects, Objects, Ends and Defigns, than it does upon the formal and scholastick Niceties of Genus and Difference.

SECT. VII.

Of a compleat Conception of Things.

HAVING dwelt so long upon the first Rule to direct our Conceptions, and given an Account of the Definition both of Names and Things in order to gain clear and distinct Ideas, we make haste now to the second Rule to guide our Conceptions, and that is, Conceive of Things compleatly in all their Parts.

All Parts have a Reference to some Whole: Now there is an old Distinction which logical Writers make of a Whole and its Parts into four several Kinds, and it may be proper just to men-

tion them here.

I. There is a metaphysical Whole, when the Essence of a Thing is said to consist of two Parts, the Genus and the Difference, i. e. the general and the special Nature, which being joined together make up a Definition. This has been the Subject

of the foregoing Sections.

2. There is a mathematical Whole which is better call'd integral, when the feveral Parts which go to make up the Whole are really distinct from one another, and each of them may subsist apart. So the Head, the Limbs, and the Trunk are the integral Parts of an animal Body; so Unites are the integral Parts of any large Number; so these Discourses which I have written concerning Perception, Judgment, Reasoning and Disposition are the four integral Parts of Logick. This fort of Parts goes to make up the Compleatness of any Subject, and this is the chief and most direct Matter of our Discourse in this Section.

3. There is a physical or effential Whole, which is usually made to fignify and include only the two effential Parts of Man, Body and Soul: But I think the Sense of it may better be altered, or at least enlarged, and so include all the effential Modes, Attributes or Properties which are contain'd in the Comprehension of any Idea. This shall be the Subject of Discourse under the third Rule to direct our Conceptions.

4. There is a logical Whole, which is also call'd an universal; and the Parts of it are all the particular Ideas to which this universal Nature extends. So a Genus is a Whole in respect of the several Species which are its Parts. So the Species is a Whole, and all the Individuals are the Parts of it. This shall be treated of in the fourth Rule to guide

our Conceptions.

At present we consider an Idea as an integral Whole, and our second Rule directs us to contemplate it in all its Parts: But this can only refer to complex Ideas, for simple Ideas have no Parts.

SECT. VIII.

Of Division, and the Rules of it.

Since our Minds are narrow in their Capacity, and cannot survey the several Parts of any complex Being with one single View, as God sees all Things at once, therefore we must as it were take it to Pieces, and consider of the Parts separately, that we may have a more compleat Conception of the Whole. So if I would learn the Nature of a Watch, the Workman takes it to pieces and shews me the Spring, the Wheels, the Axles, the Pinions, the Balance, the Dial-Plate,

Plate, the Pointer, the Case, &c. and describes each of these Things to me apart, together with their Figures and their Uses. If I would know what an Animal is, the Anatomist considers the Head, the Trunk, the Limbs, the Bowels apart from each other, and gives me distinct Lectures upon each of them. So a Kingdom is divided into its feveral Provinces: A Book into its feveral Chapters; and any Science is divided according to the several Subjects of which it treats.

This is what we properly call the Division of an Idea, which is an Explication of the Whole by its several Parts, or an Enumeration of the several Parts that go to compose any whole Idea, and to render it compleat. And I think when Man is divided into Body and Soul, it properly comes under this Part of the Doctrine of integral Division, as well as when the meer Body is divided into Head, Trunk and Limbs: This Division is sometimes call'd Partition.

When any of the Parts of any Idea are yet farther divided in order to a clear Explication of the Whole, this is call'd a Subdivision; as when a Year is divided into Months, each Month into Days, and each Day into Hours, which may also be farther subdivided into Minutes and Seconds.

It is necessary in order to the full Explication of any Being to confider each Part, and the Properties of it, distinct by it self, as well as in its Relation to the Whole: for there are many Properties that belong to the Parts of a Being which cannot properly be ascrib'd to the Whole, tho' these Properties may fit each Part for its proper Station, and as it stands in that Relation to the whole complex Being.

The special Rules of a good Division are these.

1. Rule. Each Part fingly taken muß contain less than the whole, but all the Parts taken collectively (or together) must contain neither more nor less than the whole. Therefore if in discoursing of a Tree you divide it into the Trunk and Leaves it is an imperfect Division, because the Root and the Branches are needful to make up the Whole. So Logick would be ill divided into Apprehension, Judgment and Reasoning, for Method is a considerable Part of the Art which teaches us to use our Reason right, and should by no Means be omitted.

Upon this Account, in every Division wherein we design a perfect Exactness, it is necessary to examine the whole Idea with Diligence, lest we omit any Part of it thro' want of Care; tho' in some Cases it is not possible, and in others it is not necessary that we should descend to the minutest Parts.

- 2. Rule. In all Divisions we should first consider the larger and more immediate Parts of the Subject, and not divide it at once into the more minute and remote Parts. It would by no Means be proper to divide a Kingdom first into Streets, and Lanes, and Fields, but it must be first divided into Provinces or Counties, then those Counties may be divided into the Towns, Villages, Fields, &c. and the Towns into Streets and Lanes.
- 3. Rule. The several Parts of a Division ought to be opposite, i. e. one Part ought not to contain another. It would be a ridiculous Division of an Animal into Head, Limbs, Body and Brain, for the Brains are contain'd in the Head.

C. VI. S. 8. The right Use of Reason. 121

Yet here it must be noted, that sometimes the Subjects of any Treatife, or the Objects of a particular Science may be properly and necessarily so divided, that the second may include the first, and the third may include the first and second, without offending against this Rule, because in the second or following Parts of the Science or Difcourse, these Objects are not consider'd in the fame manner as in the first; as for Instance, Geometry divides its Objects into Lines, Surfaces and Solids: Now tho' a Line be contain'd in a Surface or a Solid, yet it is not confider'd in them feparate and alone, or as a meer Line, as it is in the first Part of Geometry which treats of Lines. Logick is rightly divided into Conception, Judgment, Reasoning and Method; for tho' Ideas or Conceptions are contain'd in the following Parts of Logick, yet they are not there treated of as separate Ideas, which are the proper Subject of the first Part.

4. Rule. Let not Subdivisions be too numerous without Necessity: for it is better many Times to distinguish more Parts at once if the Subject will bear it, than to mince the Discourse by excessive dividing and subdividing. It is preserable therefore in a Treatise of Geography to say that in a City we will consider its Walls, its Gates, its Buildings, its Streets and Lanes, than to divide it formally first into the encompassing and the encompassed Parts; the encompassing Parts are the Walls and Gates; the encompassed Part includes the Walls and Gates; the encompassed Part includes the Walls and the Buildings; the Ways are the Streets and the Lanes; Buildings consist of the Foundations and the Superstructure, &c.

Too great a Number of Subdivisions has been affected by some Persons in Sermons, Treatises, Instructions, &c. under Pretence of greater Accuracy: But this sort of Subtilties hath often given greater Confusion to the Understanding, and sometimes more Difficulty to the Memory. In these Cases it is only a good Judgment can determine what Subdivisions are needful.

- 5. Rule. Divide every Subject according to the special Design you have in View. One Idea or Subject may be divided in very different Manners according to the different Purpoles we have in discoursing of it. So if a Printer were to confider the feveral Parts of a Book, he must divide it into Sheets, the Sheets into Pages, the Pages into Lines, and the Lines into Letters. But a Grammarian divides a Book into Periods, Sentences and Words, or Parts of Speech, as Noun, Pronoun, Verb, &c. A Logician confiders a Book as divided into Chapters, Sections, Arguments, Propositions, Ideas, and with the Help of Ontology he divides the Propositions into Subject, Object, Property, Relation, Action, Passion, Cause, Effect, &c. But it would be very ridiculous for a Logician to divide a Book into Sheets, Pages and Lines; or for a Printer to divide it into Nouns and Pronouns, or into Propositions, Ideas, Properties or Causes.
- 6. Rule. In all your Divisions observe with greatest Exactness the Nature of Things. And here I am constrain'd to make a Subdivision of this Rule into two very necessary Particulars.

(1.) Let the Parts of your Division be such as are properly distinguished in Nature. Do not divide as as a funder those Parts of the Idea which are intimately

timately united in Nature, nor unite those Things into one Part which Nature has evidently difjoined: Thus it would be very improper in treating of an Animal Body to divide it into the superrior and inferior Halves; for it would be hard to fay how much belongs by Nature to the inferior Half, and how much to the superior. Much more improper would it be still to divide the Animal into the right Hand Parts and left Hand Parts, which would bring greater Confusion. This would be as unnatural as a Man who should cleave a Hazel Nut in Halves thro' the Husk, the Shell and the Kernel at once, and fay a Nut is divided into these two Parts; whereas Nature leads plainly to the threefold Distinction of Husk, Shell and Kernel.

(2.) Do not affect Duplicities nor Triplicities, or any certain Number of Parts in your Division of Things; for we know of no such certain Number of Parts which God the Creator has observed in forming all the Varieties of his Creatures, nor is there any uniform determined Number of Parts in the various Subjects of human Art or Science; yet some Persons have disturbed the Order of Nature and abused their Readers by an Affectation of Dichotomies, Trichotomies, Sevens, Twelves, &c. Let the Nature of the Subject, considered together with the Design which you have in view, always determine the Number of Parts into which you divide it.

After all, it must be confess'd that an intimate Knowledge of Things and a judicious Observation will assist in the Business of Division, as well as of Definition, better than too nice and curious an Attention to the meer Formalities of logical Writers, without a real Acquaintance with Things.

SECT.

SECT. IX.

Of a comprehensive Conception of Things, and of Abstraction.

HE third Rule to direct our Conception requires us to conceive of Things comprehensively. As we must survey an Object in all its Parts to obtain a compleat Idea of it, so we must consider it in all its Modes, Attributes, Properties and Relations, in order to obtain a comprehensive Conception of it.

The Comprehension of an Idea, as it was explain'd under the Doctrine of Universals, includes only the essential Modes or Attributes of that Idea; but in this Place the Word is taken in a larger Sense, and implies also the various occasional Pro-

perties, accidental Modes and Relations.

The Necessity of this Rule is founded upon the same Reason as the former, viz. That our Minds are narrow and scanty in their Capacities, and as they are not able to consider all the Parts of a complex Idea at once, so neither can they at once contemplate all the different Attributes and Circumstances of it: We must therefore consider Things successively and gradually in their various Appearances and Circumstances: As our natural Eye cannot at once behold the six Sides of a Dye or Cube, nor take Cognizance of all the Points that are mark'd on them, and therefore we turn up the Sides successively, and thus survey and number the Points that are mark'd on each Side, that we may know the whole.

In order to a comprehensive View of any Idea, we must first consider whether the Object of it has an Existence as well as an Essence; whether it be a simple or a complex Idea; whether it be a Substance or a Mode; if it be a Substance, then we must enquire what are the effential Modes of it, which are necessary to its Nature, and what are those Properties or Accidents of it, which belong to it occasionally, or as it is placed in some particular Circumstances: We must view it in its internal and absolute Modes, and observe it in those various external Relations in which it stands to other Beings: We must consider it in its Powers and Capacities either to do or suffer: We must trace it up to its various Causes, whether supream or subordinate. We must descend to the Variety of its Effects, and take Notice of the feveral Ends and Designs which are to be attained by it. We must conceive of it as it is either an Object or a Subject; what are the Things that are akin to it, and what are the Opposites or Contraries of it; for many Things are to be known both by their contrary and their kindred Ideas.

If the thing we discourse of be a meer Mode, we must enquire whether it belong to Spirits or Bodies; whether it be a physical or moral Mode: If moral, then we must consider its Relation to God, to our selves, to our Neighbours; its reference to this Life or the Life to come. If it be a Virtue, we must seek what are the Principles of it, what are the Rules of it, what are the Tendencies of it, what are the false Virtues that counterfeit it, and what are the real Vices that oppose it, what are the Evils which attend the Neglett of it, what are the Rewards of the Practice of it

both here and hereafter.

If the Subject be historical or a Matter of Fact, we may then enquire whether the Action was done at all; whether it was done in such a manner, or by such Persons as is reported; at what Time it was done; in what Place; by what Motive, and for what Design; what is the Evidence of the Fact; who are the Witnesses; what is their Character and Credibility; what Signs there are of such a Fact; what concurrent Circumstances which may either support the Truth of it, or render it doubtful.

In order to make due Enquiries into all these and many other Particulars which go towards the compleat and comprehensive Idea of any Being, the Science of Ontology is exceeding necessary. is what was wont to be call'd the first Part of Metaphysicks in the Peripatetick Schools. It treats of Being in its most general Nature, and of all its Affections and Relations. I confess the old popish Schoolmen have mingled a Number of useless Subtilties with this Science; they have exhausted their own Spirits, and the Spirits of their Readers in many laborious and intricate Trifles, and fome of their Writings have been fruitful of Names which hath done much Injury to the facred Study of Divinity. Upon this Account many of the Moderns have most unjustly abandoned the whole Science at once, and thrown Abundance of Contempt and Raillery upon the very Name of Metaphysicks; but this Contempt and Censure is very unreasonable, for this Science separated from some Aristotelian Fooleries and scholastic Subtilties is so necessary to a distinct Conception, solid Judgment, and just Reasoning on many Subjects, that sometimes it is introduced as a Part of Logick, and not without Reason. And those who utterly despite and ridicule it, either betray

betray their own Ignorance, or will be suppos'd to make their Wit and Banter a Refuge and Excuse for their own Laziness. Yet thus much I would add, that the later Writers of Ontology are generally the best on this Account, because they have left out much of the antient Jargon.

Here let it be noted that it is neither useful, necessary, or possible to run thro' all the Modes, Circumstances and Relations of every Subject we take in Hand; but in Ontology we enumerate a great Variety of them, that so a judicious Mind may choose what are those Circumstances, Relations and Properties of any Subject, which are most necessary to the present Design of him that speaks or writes, either to explain, to illustrate, or to

prove the Point.

As we arrive at the compleat Knowledge of an Idea in all its Parts, by that Act of the Mind which is call'd Division, so we come to a comprehensive Conception of a Thing in its several Properties and Relations, by that Act of the Mind which is call'd Abstraction, i. e. we consider each fingle Relation or Property of the Subject alone, and thus we do as it were withdraw and separate it in our Minds both from the Subject it self, as well as from other Properties and Relations in order to make a fuller Observation of it.

This Act of Abstraction is said to be twofold,

either Precisive or Negative.

Precisive Abstraction is when we consider those Things apart which cannot really exist apart; as when we confider a Mode without confidering its Substance and Subject, or one essential Mode without another. Negative Abstraction is when we confider one Thing separate from another, which may also exist without it; as when we conceive of a Subject without conceiving of its accidental Modes or Relations; or when we conceive of one Accident without thinking of another; if I think of reading or writing without the express Idea of some Man, this is precisive Abstraction; or if I think of the Attraction of Iron, without the express Idea of some particular magnetick Body. But when I think of a Needle without an Idea of its Sharpness, this is negative Abstraction; and it is the same when I think of its Sharpness without considering its Length.

S е с т. Х.

. Of the extensive Conception of Things, and of Distribution.

S the Compleatness of an Idea refers to the several Parts that compose it, and the Comprehension of an Idea includes its various Properties, so the Extension of an Idea denotes the various Sorts or Kinds of Beings to which the same Idea belongs: And if we would be fully acquainted with a Subject, we must observe

This fourth Rule to direct our Conceptions, viz. conceive of Things in all their Extension, i.e. we must search out the various Species or special Natures which are contain'd under it as a Genus or general Nature. If we would know the Nature of an Animal persectly, we must take Cognizance of Beasts, Birds, Fishes and Insects, as well as Men, all which are contain'd under the general Nature and Name of Animal.

As an integral Whole is distinguished into its several Parts by Division, so the Word Distribution is most properly us'd when we distinguish an universal Whole into its several Kinds or Species: And perhaps it had been better if this Word had been always confined to this Signification, tho it must be confest, that we frequently speak of the Division of an Idea into its several Kinds, as well as into its several Parts.

The Rules of a good Distribution are much the fame with those which we have before applied to Division, which may be just repeated again in the briefest manner, in order to give Examples to them.

- I. Rule. Each Part fingly taken must contain less than the Whole, but all the Parts taken collectively or together, must contain neither more nor less than the Whole; or as Logicians sometimes express it, the Parts of the Division ought to exhaust the whole Thing which is divided. So Medicine is justly distributed into Prophylastick, or the Art of preserving Health; and Therapeutick, or the Art of restoring Health; for there is no other sort of Medicine beside these two. But Men are not well distributed into tall or short, for there are some of a middle Stature.
- II. Rule. In all Distributions we should first consider the larger and more immediate Kinds or Species or Ranks of Being, and not divide a Thing at once into the more minute and remote. A Genus should not at once be divided into Individuals, or even into the lowest Species, if there be a Species superior. Thus it would be very improper to divide Animal into Trout, Lobster, Eel, Dog, Bear, Eagle, Dove, Worm and Buttersty, for these

these are inferior Kinds; whereas Animal ought first to be distributed into Man, Beast, Bird, Fish, Insect: And then Beast should be distributed into Dog, Bear, &c. Bird into Eagle, Dove, &c. Fish into Trout, Eel, Lobster, &c.

It is irregular also to join any inferior Species in the same Rank or Order with the superior; as if we should distinguish Animals into Birds, Bears and Oysters, &c. it would be a ridiculous Distri-

bution.

III. Rule. The several Parts of a Distribution ought to be opposite; that is, one Species or Class of Beings in the same Rank of Division ought not to contain or include another; so Men ought not to be divided into the Rich, the Poor, the Learned and the Tall; for poor Men may be

both learned and tall, and so may the rich.

But it will be objected, are not animated Bodies rightly distributed into Vegetative and Animal, or (as they are usually called) Sensitive? Now the Sensitive contains the Vegetative Nature in it, for Animals grow as well as Plants. I answer that in this and all such Distributions the Word Vegetative signifies meerly Vegetative; and in this Sense Vegetative will be sufficiently opposite to Animal, for it cannot be said of an Animal that it contains meer Vegetation in the Idea of it.

IV. Rule. Let not Subdivisions be too numerous without Necessity; therefore I think Quantity is better distinguished at once into a Line, a Surface and a Solid, than to say as Ramus does, that Quantity is either a Line, or a Thing lined; and a Thing lined is either a Surface or a Solid.

V. Rule. Distribute every Subject according to the special Design you have in View, so far as is necessary or useful to your present Enquiry. Thus a Politician distributes Mankind according to their civil Characters, into the Rulers and the Ruled; and a Physician divides them into the Sick or the Healthy; but a Divine distributes them into Turks, Heathens, Jews, or Christians.

Here Note, that it is a very useless Thing to distribute any Idea into such Kinds or Members as have no different Properties to be spoken of; as it is meer trifling to divide right Angles into fuch whose Legs are equal, and whose Legs are unequal, for as to the meer right Angle they have no

different Properties.

VI. Rule. In all your Distributions observe the Nature of Things with great Exactness; and don't affect any particular Form of Distribution, as fome Persons have done, by dividing every Genus into two Species, or into three Species; whereas Nature is infinitely various, and human Affairs and human Sciences have as great a Variety, nor is there any one Form of Distribution that will

exactly fuit with all Subjects.

Note, It is to this Doctrine of Distribution of a Genus into its several Species, we must also refer the Distribution of a Cause according to its several Effects, as some Medicines are heating, some are cooling; or an Effect when it is diffinguished by its Causes, as Faith is either built upon divine Testimony or human. It is to this Head we refer particular artificial Bodies, when they are distinguished according to the Matter they are made of, as a Statue is either of Brass, of Marble, or Wood, &c. and any other Beings when they are distinguished K 2

guished according to their End and Design, as the Furniture of Body or Mind is either for Ornament or Use. To this Head also we refer Subjects when they are divided according to their Modes or Accidents, as Men are either merry, or grave, or sad; and Modes when they are divided by their Subjects, as Distempers belong to the Fluids, or to the solid Parts of the Animal.

It is also to this Place we reduce the Proposals of a Difficulty under its various Cases, whether it be in Speculation or Practice: As to shew the Reason of the Sun-beams burning Wood, whether it be done by a convex Glass or a concave; or to shew the Construction and Mensuration of Triangles, whether you have two Angles and a Side given, or two Sides and an Angle, or only three Sides. Here it is necessary to distribute or divide a Difficulty into all its Cases, in order to gain a perfect Knowledge of the Subject you contemplate.

It might be observ'd here, that Logicians have fometimes given a Mark or Sign to distinguish when it is an integral Whole, that is divided into its Parts or Members, or when it is a Genus, an universal IV hole, that is distributed into its Species and Individuals. The Rule they give is this: Whenfoever the whole Idea can be directly and properly affirmed of each Part, as a Bird is an Animal, a Fish is an Animal, Bucephalus is a Horse, Peter is a Man, then it is a Distribution of a Genus into its Species, or a Species into its Individuals: But when the whole cannot be thus directly affirmed concerning every Part, then it is a Division of an integral into its several Pieces or Members; as we cannot fay the Head, the Breaft, the Hand or the Foot is an Animal; but we fay the Head is a Part of the Animal, and the Foot is another Part. This This Rule may hold true generally in corporeal Beings, or perhaps in all Substances: But when we say the Fear of God is Wisdom, and so is human Civility: Criticism is true Learning, and so is Philosophy: To execute a Murderer is Justice, and to save and defend the Innocent is Justice too: In these Cases it is not so easily determined, whether an integral Whole be divided into its Parts, or an universal into its Species: For the Fear of God may be call'd either one Part, or one Kind of Wisdom: Criticism is one Part, or one Kind of Learning: And the Execution of a Murderer may be call'd a Species of Justice, as well as a Part of it. Nor indeed is it a Matter of great Importance to determine this Controversy.

SECT. XI. Of an orderly Conception of Things.

THE last Rule to direct our Conceptions, is, that we should rank and place them in a proper Method and just Order. This is of necessary Use to prevent Confusion; for as a Trader who never places his Goods in his Shop or Warehouse in a regular Order, nor keeps the Accounts of his buying and selling, paying and receiving in a just Method, is in utmost Danger of plunging all his Affairs into Consusion and Ruin; so a Student who is in the Search of Truth, or an Author or Teacher who communicates Knowledge to others, will very much obstruct his Design, and consound his own Mind or the Mind of his Hearers, unless he range his Ideas in just Order.

If we would therefore become successful Learners or Teachers, we must not conceive of Things in a confused Heap, but dispose our Ideas in some certain Method, which may be most easy and use-

K 3

ful both for the Understanding and Memory; and be sure as much as may be to follow the Nature of Things, for which many Rules might be given, viz.

1. Conceive as much as you can of the Essentials of any Subject, before you consider its Acci-

dentals.

2. Survey first the general Parts and Properties of any Subject, before you extend your Thoughts to discourse of the particular Kinds or Species of it.

3. Contemplate Things first in their own simple Natures, and afterward view them in Composition with other Things; unless it be your present Purpose to take a compound Being to pieces, in order to find out or to shew the Nature of it by scarching and discovering of what Simples it is composed.

4. Consider the absolute Modes or Affections of any Being as it is in it self, before you proceed to consider it relatively, or to survey the various Relations in which it stands to other Be-

ings, &c.

Note, These Rules chiefly belong to the Method of Instruction which the Learned call Synthetic.

But in the Regulation of our Ideas there is feldom an absolute Necessity that we should place them in this or the other particular Method: It is possible in some Cases that many Methods may be equally good, that is, may equally assist the Understanding and the Memory: To frame a Method exquisitely accurate, according to the strict Nature of Things, and to maintain this Accuracy from the Beginning to the End of a Treatise, is a most rare and difficult Thing, if not impossible. But a larger Account of Method would be

C. VI. S. 12. The right Use of Reason. 135

be very improper in this Place, left we anticipate what belongs to the fourth Part of Logick.

SECT. XII.

These five Rules of Conception exemplified.

IT may be useful here to give a Specimen of the five special Rules to direct our Conceptions, which have been the chief Subject of this long Chapter, and represent them practically in one View.

Suppose the Theme of our Discourse were the

Passions of the Mind.

Ist, To gain a clear and distinct Idea of Passion, we must define both the Name and the Thing.

To begin with the Definition of the Name; we are not here to understand the Word Passion in its vulgar and most limited Sense, as it signifies meerly Anger or Fury; nor do we take it in its most extensive philosophical Sense, for the suftaining the Action of an Agent; but in the more limited philosophical Sense, Passions signify the various Affections of the Mind, fuch as Admiration, Love, or Hatred; this is the Definition of the Name.

We proceed to the Definition of the Thing. Passion is defined a Sensation of some special Commotion in animal Nature, occasioned by the Mind's Perception of some Object. Here the Genus or general Nature of Passion is a Sensation of some special Commotion in animal Nature, and herein it agrees with Hunger, Thirst, Pain, &c. The effential Difference of it is, that this Commotion arises from a Thought or Perception of the Mind, and hereby it is diftinguished from Hunger, Thirst, or Pain.

2 dly,

2^{dly}, We must conceive of it compleatly, or survey the several Parts that compose it. These are (1.) The Mind's Perception of some Object. (2.) The consequent Ruffle or special Commotion of

the Nerves, and Blood, and animal Spirits. And

(3.) The Senfation of this inward Commotion.

3^{dly}, We must consider it comprehensively in its various Properties. The most essential Attributes that make up its Nature ha e been already mentioned under the foregoing Heads. Some of the most considerable Properties that remain are these, viz. That Passion belongs to all Mankind, in greater or lesser Degrees: It is not constantly present with us, but upon some certain Occasions: It is appointed by our Creator for various useful Ends and Purposes, viz. to give us Vigour in the Pursuit of what is good and agreeable to us, or in the Avoidance of what is hurtful: It is very proper for our State of Trial in this World: It is not utterly to be rooted out of our Nature, but to be moderated and governed according to Rules of Virtue and Religion, &c.

4thly, We must take Cognizance of the various Kinds of it, which is call'd an extensive Conception of it. If the Object which the Mind perceives be very uncommon, it excites the Passion of Admiration. If the Object appear agreeable it raises Love: If the agreeable Object be absent, it is Desire: If attainable, it excites Hope: If unattainable, Despair: If it be present and possess, it is the Passion of Joy: If lost, it excites Sorrow. If the Object be disagreeable, it causes in general Hatred or Aversion: If it be absent and we are in Danger of it, it raises our Fear: If it be present, it is Sor-

row and Sadness, &c.

5^{thly}, All these Things and many more which go to compose a Treatise on this Subject must be placed

placed in their proper Order: A flight Specimen of which is exhibited in this short Account of Passion, and which that admirable Author Descartes has treated of at large; the for want of sufficient Experiments and Observations in natural Philosophy, there are some sew Mistakes in his Account of animal Nature.

SECT. XIII.

An Illustration of these sive Rules by Similitudes.

HUS we have brought the first Part of Logick to a Conclusion: And it may not be improper here to represent its Excellencies (so far as we have gone) by general Hints of its chief Design and Use, as well as by a various Comparison of it to those Instruments which Mankind have invented for their several Conveniencies and

Improvements.

The Design of Logick is not to furnish us with the perceiving Faculty, but only to direct and assist us in the Use of it: It doth not give us the Objects of our Ideas, but only casts such a Light on those Objects which Nature furnishes us with, that they may be the more clearly and distinctly known: It doth not add new Parts or Properties to Things, but it discovers the various Parts, Properties, Relations and Dependencies of one Thing upon another, and by ranking all Things under general and special Heads, it renders the Nature, or any of the Properties, Powers and Uses of a thing more casy to be found out, when we seek in what Rank of Beings it lyes, and wherein it agrees with, and wherein it differs from others.

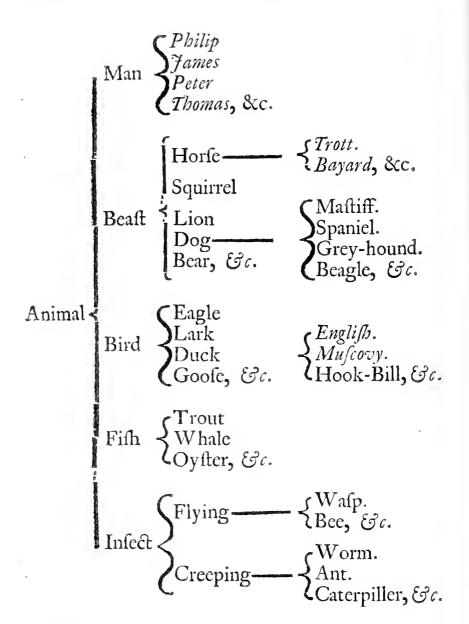

If any Comparisons would illustrate this, it may be thus represented.

- I. When Logick affifts us to attain a clear and distinct Conception of the Nature of Things by Definition, it is like those Glasses whereby we behold such Objects distinctly, as by Reason of their Smallness or their great Distance appear in Consultion to the naked Eye: So the Telescope discovers to us distant Wonders in the Heavens, and shews the milky Way, and the bright cloudy Spots in a very dark Skie to be a Collection of little Stars, which the Eye unaffished beholds in mingled Confusion. So when Bodies are too small for our Sight to survey them distinctly, then the Microscope is at Hand for our Assistance, to shew us all the Limbs and Features of the most minute Animals, with great Clearness and Distinction.
- II. When we are taught by Logick to view a Thing compleatly in all its Parts by the Help of Division, it has the Use of an anatomical Knife, which dissects an animal Body, and separates the Veins, Arteries, Nerves, Muscles, Membranes, &c. and shews us the several Parts which go to the Composition of a compleat Animal.
- III. When Logick instructs us to survey an Object comprehensively in all the Modes, Properties, Relations, Faces, and Appearances of it, it is of the same use as a terrestrial Globe, which turning round on its Axis, represents to us all the variety of Lands and Seas, Kingdoms and Nations on the Surface of the Earth in a very short Succession of Time, shews the Situation and various Relation of them to each other, and gives us a comprehensive View of them in Miniature.

IV. When this Art teaches us to distribute any extensive Idea into its different Kinds or Species, it may be compared to the prismatick Glass, that receives the Sun-Beams or Rays of Light, which seem to be uniform when falling upon it, but it separates and distributes them into their different Kinds and Colours, and ranks them in their pro-

per Succession.

Or if we descend to Subdivisions and subordinate Ranks of Being, then Distribution may also be said to form the Resemblance of a natural Tree, wherein the Genus or general Idea stands for the Root or Stock, and the several Kinds or Species, and Individuals, are distributed abroad, and represented in their Dependence and Connection, like the feveral Boughs, Branches, and leffer Shoots. For Instance, let Animal be the Root of a logical Tree, the Resemblance is seen by meer Inspection, tho' the Root be not placed at the bottom of the Page.

The same Similitude will serve also to illustrate the Division and Subdivision of an integral Whole, into its feveral Parts.

When Logick directs us to place all our Ideas in a proper Method, most convenient both for Instruction and Memory, it doth the same Service

C. VI. S. 13. The right Use of Reason. 141

as the Cases of well contrived Shelves in a large Library, wherein Folio's, Quarto's, Octavo's, and lesser Volumes, are disposed in such exact Order under the particular Heads of Divinity, History, Mathematicks, antient and miscellaneous Learning, &c. that the Student knows where to find every Book, and has them all as it were within his Command at once, because of the exact Order wherein they are placed.

The Man who has fuch Affistances as these at Hand, in order to manage his Conceptions and regulate his Ideas, is well prepared to improve his Knowledge, and to join these Ideas together in a regular manner by Judgment, which is the second Operation of the Mind, and will be the Subject

of the fecond Part of Logick.

THE

Second PART

OF.

LOGICK.

Of Judgment and Proposition.

HEN the Mind has got Acquaintance with Things by framing Ideas of them, it proceeds to the next Operation, and that is, to compare these Ideas together, and to join them by Affirmation, or disjoin them by Negation, according as we find them to agree or disagree. This Act of the Mind is called Judgment; as when we have by Perception obtained the Ideas of Plato, a Philosopher, Man, Innocent, we form these Judgments; Plato was a Philosopher; no Man is innocent.

Some Writers have afferted, that Judgment confifts in a meer Perception of the Agreement or Difagreement of Ideas. But I rather think there is an Act of the Will (at least in most Cases) necessary to form a Judgment; for tho' we do perceive, or think we perceive Ideas to agree or disagree, yet we may sometimes refrain from judging or assenting to the Per-

ception

ception, for fear lest the Perception should not be sufficiently clear, and we should be mistaken: And I am well assured at other Times, that there are Multitudes of Judgments formed, and a firm Assent given to Ideas joined or disjoined, before there is any clear Perception whether they agree or disagree; and this is the Reason of so many false Judgments or Mistakes among Men. Both these Practices are a Proof that Judgment has something of the Will in it, and does not meerly consist in Perception, since we sometimes judge (tho' unhappily) without perceiving, and sometimes we perceive without immediate judging.

As an *Idea* is the Result of our *Conception* or *Apprehension*, so a *Proposition* is the Effect of *Judgment*. The foregoing Sentences which are Examples of the Act of Judgment are properly cal-

led Propositions. Plato is a Philosopher, &c.

Here let us consider,

I. The general Nature of a Proposition, and the Parts of which it is composed.

2. The various Divisions or Kinds of Proposi-

tions.

3. The Springs of false Judgment, or the Doctrine of Prejudices.

4. General Directions to assist us in judging aright.

5. Special Rules to direct us in judging of particular Objects.

CHAP. I.

Of the Nature of a Proposition, and its feveral Parts.

Proposition is a Sentence wherein two or more Ideas or Terms are join'd or disjoin'd by one Affirmation or Negation, as Plato was a Philosopher: Every Angle is formed by two Lines meeting: No Man living on Earth can be compleatly happy. When there are never so many Ideas or Terms in the Sentence, yet if they are joined or disjoined meerly by one single Assirmation or Negation, they are properly call'd but one Proposition, tho' they may be resolved into several Propositions which are implied therein, as will appear hereafter.

In describing a *Proposition*, I use the Word Terms as well as *Ideas*, because when meer Ideas are join'd in the Mind without Words, it is rather call'd a *Judgment*; but when clothed with Words, it is call'd a *Proposition*, even tho' it be in the Mind only, as well as when it is exprest by speaking or writing.

There are three Things which go to the Nature and Constitution of a Proposition (viz.) The

Subject, the Predicate, and the Copula.

The Subject of a Proposition is that concerning which any thing is affirmed or denied: So Plato, Angle, Man living on Earth, are the Subjects of

the foregoing Propositions.

The Predicate is that which is affirmed or denied of the Subject; so Philosopher is the Predicate of the first Proposition; formed by two Lines meeting, is the Predicate of the second; capable of be-

ing compleatly happy, is the proper Predicate of the third.

The Subject and Predicate of a Proposition taken together are call'd the Matter of it; for these are the Materials of which it is made.

The Copula is the Form of a Proposition; it represents the Act of the Mind affirming or denying, and it is exprest by the Words, am, art, is, are, &c. or, am not, art not, is not, are not, &c.

It is not a Thing of Importance enough to create a Dispute, whether the Words no, none, not, never, &c. which disjoin the Ideas or Terms in a negative Proposition, shall be call'd a Part of the Subject, of the Copula, or of the Predicate: Sometimes perhaps they may seem most naturally to be included in one, and sometimes in another of these, tho' a Proposition is usually denominated affirmative or negative by its Copula, as hereafter.

Note i. Where each of these Parts of a Proposition is not express distinctly in so many Words, yet they are all understood and implicitly contained therein; as, Socrates disputed, is a compleat Proposition, for it signifies, Socrates was disputing. So, I dye, signifies, I am dying. I can write, i. c. I am able to write. In Latin and Greek one single Word is many Times a compleat Proposition.

Note 2. These Words, am, art, is, &c. when they are used alone without any other Predicate, signify both the Ast of the Mind judging, which includes the Copula, and signify also astual Existence, which is the Predicate of that Proposition. So Rome is, signifies Rome is existent: There are some strange Monsters, that is, some strange Monsters are existent. Carthage is no more, i.e. Carthage has no Being.

L

Note 3. The Subject and Predicate of a Proposition are not always to be known and distinguished by the placing of the Words in the Sentence, but by reflecting duly on the Sense of the Words, and on the Mind and Design of the Speaker or Writer: As if I say, in Africa there are many Lions, I mean, many Lions are existent in Africa: Many Lions is the Subject, and existent in Africa is the Predicate. It is proper for a Philosopher to understand Geometry; here the Word Proper is the Predicate, and all the rest is the Subject, except 1s the Copula.

Note 4. The Subject and Predicate of a Proposition ought always to be two different Ideas, or two different Terms; for where both the Terms and Ideas are the same, it is call'd an identical Proposition, which is mere trifling, and cannot tend to promote Knowledge, such as, a Rule is a Rule,

or a good Man is a good Man.

But there are some Propositions, wherein the Terms of the Subject and Predicate seem to be the same, yet the Ideas are not the same; nor can these be call'd purely identical or trissing Propositions; such as, Home is Home; that is, Home is a convenient or delightful Place: Socrates is Socrates still; that is, the Man Socrates is still a Philosopher: The Hero was not a Hero; that is, the Hero did not show his Courage: IV hat I have written, I have written: that is, what I wrote I still approve, and will not alter it: What is done, is done; that is, it cannot be undone. It may be easily observed in these Propositions the Term is equivocal, for in the Predicate it has a different Idea from what it has in the Subject.

There are also some Propositions wherein the Terms of the Subject and Predicate differ, but the Ideas are the same; and these are not meerly iden-

tical or trifling Propositions : as, impudent is shameless; a Billow is a Wave; or Fluctus (in Latin) is a Wave; a Globe is a round Body. In these Propositions either the Words are explained by a Definition of the Name, or the Ideas by a Definition of the Thing, and therefore they are by no Means useless, when formed for this Purpose.

CHAP. II.

Of the various Kinds of Propositions.

Ropolitions may be distributed into various Kinds according to their Subject, their Copula, their Predicate, their Nature or Composition, their Sense and their Evidence, which Distributions will be explained in the following Sections.

SECT. I.

Of universal, particular, indefinite, and singular Propositions.

DRopositions may be divided according to their Subject into universal and particular; this is usually call'd a Division arising from the Quantity.

An universal Proposition is when the Subject is taken according to the whole of its Extension; so if the Subject be a Genus or general Nature, it includes all its Species or Kinds: If the Subject be a Species, it includes all its Individuals. This Universality is usually signified by these Words, all, every, no, none, or the like; as, all Men must dye:

dye: No Man is Almighty: Every Creature had a

beginning.

A particular Proposition is when the Subject is not taken according to its whole Extension; that is, when the Term is limited and restrained to some one or more of those Species or Individuals, whose general Nature it expresses, but reaches not to all; and this is usually denoted by the Words, some, many, a few, there are which, &c. as, some Birds can sing well: Few Men are truly wise: There are Parrots which will talk a hundred Things.

Under the general Name of universal Propositions, we may justly include those that are singular, and for the most part those that are indefinite

alfo.

A fingular Proposition is when the Subject is a fingular or individual Term or Idea; as Descartes was an ingenious Philosopher: Sir Isaac Newton has far exceeded all his Predecessors: The Palace at Hampton-Court is a pleasant Dwelling: This Day is very cold. The Subject here must be taken according to the whole of its Extension, because being an individual, it can extend only to one, and it must therefore be regulated by the Laws of unique surfal Propositions.

versal Propositions.

An indefinite Proposition, is, when no Note, either of Universality or Particularity, is prefixed to a Subject, which is in its own Nature general; as, a Planet is ever changing its Place: Angels are noble Creatures. Now this fort of Proposition, especially when it describes the Nature of Things, is usually counted universal also, and it supposes the Subject to be taken in its whole Extension; for if there were any Planet which did not change its Place, or any Angel that were not a noble Creature.

C. II. S. 1. The right Use of Reason. 149 Creature, these Propositions would not be strictly

true.

Yet in order to secure us against Mistakes in judging of universal, particular and indefinite Propositions, it is necessary to make these following Remarks.

I. Concerning universal Propositions.

Note 1. Universal Terms may either denote a metaphysical, a physical, or a moral Universality.

A metaphysical, or mathematical Universality, is when all the Particulars contained under any general Idea have the same Predicate belonging to them without any Exception whatsoever; or when the Predicate is so essential to the universal Subject, that it destroys the very Nature of the Subject to be without it; as, all Circles have a Centre and Circumference: All Spirits in their own Nature are immortal.

A physical or natural Universality, is, when according to the Order and common Course of Nature, a Predicate agrees to all the Subjects of that Kind, tho' there may be some accidental and preternatural Exceptions; as, all Men use Words to express their Thoughts, yet dumb Persons are excepted, for they cannot speak. All Beasts have four Feet, yet there may be some Monsters with sive; or maim'd, who have but three.

A moral Universality, is when the Predicate agrees to the greatest part of the Particulars which are contain'd under the universal Subject; as, all Negroes are stupid Creatures: All Men are governed by Affection rather than by Reason: All the old Romans loved their Country: And the Scripture uses this Language, when St. Paul tells us, The Cretes

are always Liars.

Now it is evident, that a special or singular Conclusion cannot be inferr'd from a moral Universality, nor always and infallibly from a physical one, tho' it may be always inferr'd from a Universality which is metaphysical, without any Danger, or Possibility of Mistake.

Let it be observ'd also, that usually we make little or no Distinction in common Language, between a Subject that is physically or metaphysically

universal.

Note 2. An universal Term is sometimes taken collectively for all its particular Ideas united together, and sometimes distributively, meaning each

of them fingle and alone.

Instances of a collective Universal are such as these: All these Apples will fill a Bushel: All the Hours of the Night are sufficient for sleep: All the Rules of Grammar overload the Memory. In these Propositions it is evident, that the Predicate belongs not to the Individuals separately, but to the whole collective Idea; for we cannot affirm the same Predicate, if we change the Word all into one, or into every; we cannot say one Apple or every Apple will fill a Bushel, &c. Now such a collective Idea when it becomes the Subject of a Proposition, ought to be esteem'd as one single Thing, and this renders the Proposition singular or indefinite, as we shall shew immediately.

A distributive Universal will allow the Word all to be changed into every, or into one, and by

this Means is distinguished from a collective.

Instances of a distribute Universal, are the most common on every Occasion; as, all Men are mortal: Every Man is a Sinner, &c. But in this fort of Universal there is a Distinction to be made, which follows in the next Remark.

Note 3. When an universal Term is taken distributively, sometimes it includes all the Individuals contained in its inferior Species: as when I fay, every Sickness has a Tendency to Death; I mean every individual Sickness as well as every Kind. But fometimes it includes no more than meerly each Species or Kind; as when the Evangelist says, Christ healed every Disease, or every Disease was healed by Christ; that is, every kind of Disease. The first of these, Logicians call the Distribution of an Universal in singula generum; the last is a Distribution in genera singulorum. But either of them joined to the Subject render a Proposition universal.

Note 4. The Universality of a Subject is often restrained by a part of the Predicate; as when we say, all Men learn Wisdom by Experience: The universal Subject, all Men, is limited to fignify only, all those Men who learn Wisdom. The Scripture also uses this fort of Language, when it speaks of all Men being justified by the Righteousness of one, Rom. v. 18. that is, all Men who are

justified obtain it this way.

Observe here, that not only a metaphysical or natural, but a moral Universality also is oftentimes to be restrained by a part of the Predicate; as when we fay, all the Dutch are good Seamen: All the Italians are subtle Politicians; that is, those among the Dutch, who are Seamen, are good Seamen; and those among the *Italians*, who are P_{θ} liticians, are subtle Politicians, i. e. they are generally fo.

Note 5. The Universality of a Term is many times restrained by the particular Time, Place, Circumstance, &c. or the Design of the Speaker; as if we are in the City of London, and fay, all the Weavers went to present their Petition; we mean only all the Weavers who dwell in the City. So when it is said in the Gospel, all Men did marvel, Mark v. 20. it reaches only to all those Men who

beard of the Miracles of our Saviour.

Here also it should be observed, that a moral Universality is restrained by Time, Place, and other Circumstances as well as a natural; so that by these Means the Word all sometimes does not extend to a tenth Part of those who at first might seem to be included in that Word.

One Occasion of these Difficulties and Ambiguities, that belong to universal Propositions, is the common Humour and Temper of Mankind, who generally have an Inclination to magnify their Ideas, and to talk roundly and universally concerning any thing they speak of; which has introduced universal Terms of Speech into Custom and Habit, in all Nations and all Languages, more than Nature or Reason would dictate; yet when this Custom is introduced, it is not at all improper to use this fort of Language in solemn and tacred Writings, as well as in familiar Discourse.

II. Remarks concerning indefinite Propositions.

Note 1. Propositions carrying in them univerfal Forms of Expression, may sometimes drop the Note of Universality, and become indefinite, and yet retain the same universal Sense, whether metaphysical, natural or moral, whether collective or distributive.

We may give Instances of each of these.

Metaphysical; as, a Circle has a Centre and Circumference. Natural; as, Beasts have four Feet. Moral; as, Negroes are stupid Creatures. Collective; as, the Apples will fill a Bushel. Distributive; as, Men are mortal.

Note 2. There are many Cases wherein a collective Idea is express in a Proposition by an indefinite Term, and that where it describes the Nature or Quality of the Subject, as well as when it declares some past Matters of Fast; as, Fir-trees set in good Order will give a charming Prospect; this must signify a Collection of Fir-trees, for one makes no Prospect. In Matters of Fast this is more evident and frequent; as the Romans over-eame the Gauls: The Robbers surrounded the Coach: The wild Geese slew over the Thames in the Form of a Wedge. All these are collective Subjects.

Note 3. In indefinite Propositions the Subject is often restrained by the Predicate, or by the special Time, Place or Circumstances, as well as in Propositions which are expressly universal; as, the Chineses are ingenious Silk-Weavers, i. e. those Chineses, which are Silk-Weavers, are ingenious at their Work. The Stars appear to us when the Twylight is gone. This can signify no more than

the Stars which are above our Horizon.

Note 4. All these Restrictions tend to reduce some indefinite Propositions almost into particular, as will appear under the next Remarks.

III. Remarks concerning particular Propositions.

Note 1. A particular Proposition may sometimes be express indefinitely, without any Note of Particularity presixt to the Subject; as, in Times of Confusion Laws are not executed: Men of Virtue are disgraced, and Murtherers escape, i. e. some Laws, some Men of Virtue, some Murtherers: Unless we should call this Language a moral Universality, tho'l think it can hardly extend so far.

Note 2. The Words some, a few, &c. tho' they generally denote a proper Particularity, yet sometimes they express a collective Idea: as, some of the Ene-

mies

mies beset the General around. A sew Greeks would beat a thousand Indians.

I conclude this Section with a few general Re-

marks on this Subject (viz.)

Gen. Rem. I. Since univerfal, indefinite and particular Terms in the plural Number may either be taken in a collective or a distributive Sense, there is one short and easy Way to find when they are collective and when distributive (viz.) If the Plural Number may be chang'd into the singular, i. e. if the Predicate will agree to one single Subject, it is a distributive Idea; if not, it is collective.

Gen. Rem. II. Universal and particular Terms in the plural Number, such as, all, some, sew, many, &c. when they are taken in their distributive Sense, represent several single Ideas; and when they are thus affixed to the Subject of a Proposition, render that Proposition universal or particular.

Gen. Rem. III. Universal and particular Terms in the plural Number, taken in their collective Sense, represent generally one collective Idea.

If this one collective Idea be thus represented (whether by universal or particular Terms) as the Subject of a Proposition which describes the Nature of a Thing, it properly makes either a singular or an indefinite Proposition; for the Words, all, some, a serv, &c do not then denote the Quantity of the Proposition, but are esteem'd meerly as Terms which connect the Individuals together in order to compose one collective Idea. Observe these Instances, all the Sycamores in the Garden would make a large Grove; i.e. this one Collection of Sycamores, which is a singular Idea.

Some of the Sycamores in the Garden would make a fine Grove: Sycamores would make a noble Grove. In these last the Subject is rather indefinite than fingular. But it is very evident, that in each of these Propositions the Predicate can only belong to a collective Idea, and therefore the Subject must be esteem'd a collective.

If this collective Idea (whether represented by universal or particular Terms) be used in describing past Matters of Fact, then it is generally to be esteem'd a singular Idea, and renders the Proposition singular; as, all the Soldiers of Alexander made but a little Army: A few Macedonians vanquished the large Army of Darius: Some Grenadiers in the Camp plundered all the neighbouring Towns.

Now we have shewn before, that if a Proposition describing the Nature of Things has an indefinite Subject, it is generally to be esteem'd universal in its propositional Sense: And if it has a singular Subject, in its propositional Sense it is always

rankt with Universals.

After all we must be forced to confess, that the Language of Mankind, and the Idioms of Speech are to exceeding various, that it is hard to reduce them to a few Rules; and if we would gain a just and precise Idea of every universal, particular and indefinite Expression, we must not only consider the peculiar Idiom of the Language, but the Time, the Place, the Occasion, the Circumstances of the Matter spoken of, and thus penetrate as far as possible into the Design of the Speaker or Writer.

SECT. II.

Of affirmative and negative Propositions.

HEN a Proposition is consider'd with Regard to its Copula, it may be divided into affirmative and negative; for it is the Copula joins or disjoins the two Ideas. Others call this a Division of Propositions according to their Quality.

An affirmative Proposition is when the Idea of the Predicate is supposed to agree to the Idea of the Subject, and is joined to it by the Word is, or are, which is the Copula; as, all Men are Sinners. But when the Predicate is not supposed to agree with the Subject, and is disjoined from it by the Particles is not, are not, &c. the Proposition is negative; as, Man is not innocent; or, no Man is innocent. In an affirmative Proposition we affert one Thing to belong to another, and, as it were, unite them in Thought and Word: In negative Propositions we separate one Thing from another, and deny their Agreement.

Terms are faid to be disjoined as well as joined by a Copula: But if we can but suppose the negative Particles do really belong to the Copula of negative Propositions, it takes away the Harshness of the Expression: and to make it yet softer, we may consider that the Predicate and Subject may be properly said to be joined in a Form of Words as a Proposition, by connexive Particles in Grammar or Logick, tho' they are disjoined in their Sense and Signification. Every Youth, who has learnt his Grammar, knows there are such Words as disjoined in their Sense and Signification.

junctive Conjunctions.

Several Things are worthy our Notice on this

Subject.

and Ideas (as I have shewn before) concerning which it is hard to determine whether they are negative or positive, so there are some Propositions concerning which it may be difficult to say, whether they affirm or deny; as, when we say, Plato was no Fool: Cicero was no unskilful Orator: Cæsar made no Expedition to Muscovy: An Oyster has no part like an Eel: It is not necessary for a Physician to speak French, and for a Physician to speak French is needless. The Sense of these Propositions is very plain and easy, tho' Logicians might squabble perhaps a whole Day, whether they should rank them under the Names of negative or affirmative.

2^d Note. In Latin and English two Negatives joined in one Sentence make an Affirmative; as when we declare no Man is not mortal, it is the same as the we said, Man is mortal. But in Greek and oftentimes in French two Negatives make but a stronger Denial.

3^d Note. If the meer negative Term, Not, be added to the Copula of an universal affirmative Proposition, it reduces it to a particular Negative; as, all Men are not wife, signifies the same as, some

Men are not wise.

4th Note. In all affirmative Propositions, the Predicate is taken in its whole Comprehension; that is, every essential Part and Attribute of it is affirmed concerning the Subject; as when I say, a true Christian is an honest Man, every Thing that belongs to Honesty is affirmed concerning a true Christian.

5th Note. In all negative Propositions the Predicate is taken in its whole Extension; that is, every Species and Individual that is contained in the general Idea of the Predicate, is utterly denied concerning the Subject: So in this Proposition, a Spirit is not an Animal, we exclude all sorts and kinds, and particular Animals whatsoever from the Idea of a Spirit.

From these two last Remarks we may derive this Inference, that we ought to attend to the entire Comprehension of our Ideas, and to the universal Extension of them, as far as we have proper Capacity for it, before we grow too consident in our affirming or denying any Thing, which may have the least Darkness, Doubt or Dissiculty attending it: It is the want of this Attention that betrays us into many Mistakes.

SECT. III.

Of the Opposition and Conversion of Propositions.

ANY two Ideas being joined or disjoined in various Forms will afford us feveral Propofitions: All these may be distinguished according to their Quantity and their Quality* into four, which are markt or denoted by the Letters, A, E, I, O, thus:

Universal Affirmative.

Universal Affirmative.
Universal Negative.
Particular Affirmative.
Particular Negative.
according to these old Latin Rhymes

^{*} The Reader should remember here, that a Proposition according to its Quantity is called universal or particular, and according to its Quantity, it is either affirmative or negative.

Afferit A, Negat E, verùm generaliter Ambæ. Afferit I, Negat O, sed particulariter Ambo.

This may be exemplified by these two Ideas, a Vine and a Tree.

A Every Vine is a Tree.

E No Vine is a Tree.

I Some Vine is a Tree.

O Some Vine is not a Tree.

The Logicians of the Schools have written many large Trifles concerning the Opposition and Conversion of Propositions. It will be sufficient here to give a few brief Hints of these Things, that the Learner may not be utterly ignorant of them.

Propositions which are made of the same Subject and Predicate are said to be opposite, when that which is denied in one is affirmed in the other. either in whole or in part, without any Confideration whether the Propositions be true or no.

· If they differ both in Quantity and Quality

they are call'd Contradictory, as,

A Every Vine is a These can never be both true, or both false at the same O Some Vine is not Time. a Tree.

If two Universals differ in Quality they are

Contraries, as, A Every Vine is a These can never be both true together, but they may be

both false.

If two particular Propositions differ in Quality they are Subcontraries, as,

I Some Vine is a Tree.

O Some Vine is not gether, but they can never be both false.

Both particular and universal Propositions which agree in Quality but not in Quantity are call'd Subaltern, tho' these are not properly opposite, as,

A Every Vine is a Tree.

I Some Vine is a Tree.

Or thus,

E No Vine is a Tree.

O Some Vine is not a Tree.

The Canons of fubalternate Propositions are usually reckoned these three (viz.) (1.) If an universal Proposition be true, the particular will be true also, but not on the contrary. And (2.) If a particular Proposition be false, the universal must be false too, but not on the contrary. (3.) Subaltern Propositions, whether universal or particular, may sometimes be both true, and sometimes both false.

The Conversion of Propositions is when the Subject and Predicate change their Places with Prefervation of the Truth. This may be done with constant Certainty in all universal Negatives and particular Assirmatives; as, no Spirit is an Animal, may be converted, no Animal is a Spirit; and some Tree is a Vine, may be converted, some Vine is a Tree. But there is more formal Trisling in this sort of Discourse than there is of solid Improvement, because this sort of Conversion arises meetly from the Form of Words, as connected in a Proposition, rather than from the Matter.

Yet it may be useful to observe, that there are some Propositions, which by Reason of the *Ideas* or *Matter* of which they are composed may be converted with constant Truth: Such are those

Propositions

Propositions whose Predicate is a nominal or real Definition of the Subject, or the Difference of it, or a Property of the fourth Kind, or a superlative Degree of any Property or Quality what-soever, or in short, wheresoever the Predicate and the Subject have exactly the same Extension or the same Comprehension; as, every Vine is a Tree bearing Grapes; and every Tree bearing Grapes is a Vine: Religion is the truest Wisdom; and the truest Wisdom is Religion: Julius Cæsar was the first Emperor of Rome; and the first Emperor of Rome was Julius Cæsar. These are the Propositions which are properly convertible, and they are call'd reciprocal Propositions.

SECT. IV.

Of pure and modal Propositions.

A Nother Division of Propositions among the scholastick Writers is into pure and modal. This may be call'd (for Distinction sake) a Divi-

fion according to the Predicate.

When a Proposition meerly expresses that the Predicate is connected with the Subject, it is call'd a pure Proposition; as, every true Christian is an honest Man. But when it includes also the Way and Manner wherein the Predicate is connected with the Subject, it is call'd a modal Proposition, as, when I say, it is necessary that a true Christian should be an honest Man.

Logical Writers generally make the Modality of this Proposition to belong to the Copula, because it shews the Manner of the Connection between Subject and Predicate. But if the Form of the Sentence as a logical Proposition be duly consider'd, the Mode itself is the very Predicate

IVI

of the Proposition, and it must run thus: That a true Christian should be an honest Man is a necessary Thing, and then the primary Proposition is included in the Subject of the modal Proposition.

There are four Modes of connecting the Predicate with the Subject, which are usually reckoned up on this Occasion (viz.) Necessity and Contingency which are two Opposites, Possibility and Impossibility which also are Opposites; as, it is necessary that a Globe should be round: That a Globe be made of Wood or Glass is an unnecessary or contingent Thing: It is impossible that a Globe should be square: It is possible that a Globe may be made of Water.

With Regard to these modal Propositions which the Schools have introduced, I would make these two Remarks.

Remark 1. These Propositions in English are formed by the Resolution of the Words, must be, might not be, can be, and cannot be, into those more explicite Forms of a logical Copula and Predicate, is necessary, is contingent, is possible, is impossible: For it is necessary that a Globe should be round, signifies no more than that a Globe must be round.

Remark 2. Let it be noted, that this quadruple Modality is only an Enumeration of the natural Modes or Manners wherein the Predicate is connected with the Subject: We might also describe several moral and civil Modes of connecting two Ideas together (viz.) Lawfulness and Unlawfulness, Conveniency and Inconveniency, &c. whence we may form such modal Propositions as these. It is unlawful for any Person to kill an innocent Man: It is lawful for Christians to eat Flesh in Lent: To

C. H.S. 5. The right Use of Reason. 163.

tell all that we think is inexpedient: For a Man to be affable to his Neighbour is very convenient, &c.

There are several other Modes of speaking whereby a Predicate is connected with a Subject; such as, it is certain, it is doubtful, it is probable, it is improbable, it is agreed, it is granted, it is said by the Ancients, it is written, &c. all which will

form other kinds of modal Propositions.

But whether the Modality be natural, moral, &c. yet in all these Propositions it is the Mode is the proper Predicate, and all the rest of the Proposition, except the Copula (or Word is) belongs to the Subject; and thus they become pure Propositions of a complex Nature, of which we shall treat in the next Section, so that there is no great Need of making Modals a distinct fort.

There are many little Subtilties which the Schools acquaint us with concerning the Converfion, and Opposition, and Equipollence of these modal Propositions, suited to the Latin or Greek
Tongues, rather than the English, and sit to pass
away the idle Time of a Student, rather than to

enrich his Understanding.

SECT. V.

Of fingle Propositions, whether simple or complex.

HEN we consider the Nature of Propositions, together with the Formation of them and the Materials whereof they are made, we divide them into single and compound.

A fingle Proposition is that which has but one Subject and one Predicate; but if it has more Subjects or more Predicates, it is call'd a compound Proposition, and indeed it contains two or more

M 2

Propositions in it.

A fingle

A fingle Proposition (which is also call'd cate-gorical) may be divided again into fimple and

complex *.

A purely simple Proposition is that whose Subject and Predicate are made up of single Terms; as, Virtue is desirable: Every Penitent is pardoned: No Man is innocent.

When the Subject, or Predicate, or both, are made up of complex Terms, it is call'd a complex Proposition; as, every sincere Penitent is pardoned: Virtue is desirable for its own Sake: No Man alive

is perfectly innocent.

If the Term which is added to the Subject of a complex Proposition be either essential or any Way necessary to it, then it is call'd explicative, for it only explains the Subject; as, every mortal Man is a Son of Adam. But if the Term added to make up the complex Subject does not necessarily or constantly belong to it, then it is determinative, and limits the Subject to a particular part of its Extension; as, every pious Man shall be happy. In the first Proposition the Word mortal is meerly explicative: in the second Proposition the Word pious is determinative.

Here note, that whatsoever may be affirmed or denied concerning any Subject with an explicative Addition, may be also affirmed or denied of that Subject without it; as we may boldly say, every Man is a Son of Adam, as well as, every mortal Man: But it is not so, where the Addition is determinative, for we cannot say, every Man shall be

bappy, tho' every pious Man shall be so.

^{*} As fimple Ideas are opposed to complex, and fingle Ideas to compound, so Propositions are distinguished in the same manner: The English Tongue in this Respect having some Advantage above the learned Languages, which have no usual Word to distinguish single from simple.

In a complex Proposition the Predicate or Subject is fometimes made complex by the Pronouns, who, which, whose, to whom, &c. which make another Proposition; as, every Man, who is pious, shall be saved: Julius, whose Sirname was Cafar, overcame Pompey: Bodies, which are transparent, have many Pores. Here the whole Proposition is call'd the primary or chief, and the additional Proposition is call'd an incident Proposition. But it is Itill to be esteem'd in this Case meerly as a part of the complex Term; and the Truth or Falfhood of the whole complex Proposition is not to be judged by the Truth or Falshood of the incident Proposition, but by the Connection of the whole Subject with the Predicate. For the incident Proposition may be false, and absurd, or impossible, and yet the whole complex Proposition may be true, as, a Horse, which has Wings, might fly over the Thames.

Beside this Complexion which belongs to the Subject or Predicate, logical Writers use to say, there is a Complexion which may fall upon the Copula also: But this I have accounted for in the Section concerning modal Propositions; and indeed it is not of much Importance whether it were placed there or here.

SECT. VI.

Of compound Propositions.

Compound Proposition is made up of two or more Subjects or Predicates, or both; and it contains in it two or more Propositions, which are either plainly exprest, or concealed and implied.

M 3

The

The first fort of compound Propositions are those wherein the Composition is express and evident, and they are distinguished into these six Kinds, (viz.) Copulative, Disjunctive, Conditional, Causal, Relative and Discretive.

I. Copulative Propositions are those which have more Subjects or Predicates connected by affirmative or negative Conjunctions; as, Riches and Homour are Temptations to Pride: Cæsar conquered the Gauls and the Britons: Neither Gold nor Jewels will purchase Immortality. These Propositions are evidently compounded, for each of them may be resolved into two Propositions, (viz.) Riches are Temptations to Pride; and Honour is a Temptation to Pride; and so the rest.

The Truth of copulative Propositions depends upon the Truth of all the Parts of them; for if Cæsar had conquered the Gauls, and not the Britons, or the Britons and not the Gauls, the second

copulative Proposition had not been true.

Here note, those Propositions, which cannot be resolved into two or more simple Propositions, are not properly copulative, the two or more Ideas be connected and coupled by such Conjunctions, either in the Subject or Predicate; as, two and three make five: Majesty and Meekness don't often meet: The Sun, Moon, and Stars are not all to be seen at once. Such Propositions are to be esteemed meerly complex, because the Predicate cannot be affirmed of each single Subject, but only of all of them together as a collective Subject.

II. Disjunctive Propositions are when the Parts are disjoined or opposed to one another by disjunctive Particles; as, it is either Day or Night:

The

The Weather is either shining or rainy: Quantity is

either Length, Breadth, or Depth.

The Truth of Disjunctives depends on the necessary and immediate Opposition of the Parts; therefore only the last of these Examples is true; but the two first are not strictly true, because Twilight is a Medium between Day and Night; and dry, cloudy Weather is a Medium between shining and raining.

III. Conditional or hypothetical Propositions are those whose Parts are united by the conditional Particle if; as, If the Sun be fixt, the Earth must move: If there be no Fire, there will be no Smoke.

Note, The first part of these Propositions, or that wherein the Condition is contained, is call'd the antecedent, the other is call'd the consequent.

The Truth of these Propositions depends not at all on the Truth and Falshood of their two Parts, but on the Truth of the Connection of them; for each part of them may be false, and yet the whole Proposition true; as, if there be no Providence, there will be no future Punishment.

IV. Causal Propositions are where two Propositions are joined by causal Particles; as, Houses were not built that they might be destroyed: Rehoboam was unhappy because he followed evil Counsel.

The Truth of a causal Proposition arises not from the Truth of the Parts, but from the causal Influence that the one Part of it has upon the other; for both Parts may be true, yet the Proposition false, if one Part be not the Cause of the other.

Some Logicians refer reduplicative Propositions to this Place, as, Men, considered as Men, are rational Creatures, i. e. because they are Men.

M 4 V. Re-

V. Relative Propositions have their Parts joined by such Particles, as express a Relation or Comparison of one Thing to another; as, when you are silent I will speak: As much as you are worth, so much you shall be esteemed: As is the Father, so is the Son: Where there is no Tale-Bearer, Contention will cease.

These are very much akin to conditional Propofitions, and the Truth of them depends upon the

Justness of their Connection.

VI. Discretive Propositions are such wherein various and seemingly opposite Judgments are made, whose Variety or Distinction is noted by the Particles, but, tho', yet, &c. as, Travellers may change their Climate but not their Temper: Job was pati-

ent, tho' his Grief was great.

The Truth and Goodness of a discretive Proposition depends on the Truth of both Parts, and their Contradistinction to one another; for the both Parts should be true, yet if there be no seeming Opposition between them, it is an useless Assertion, the we cannot call it a false one; as, Descartes was a Philosopher, yet he was a Frenchman: The Romans were valiant, but they spoke Latin; both which Propositions are ridiculous, for want of a seeming Opposition between the Parts.

Since we have declared wherein the Truth and Falshood of these compound Propositions consists, it is proper also to give some Intimations how any of these Propositions when they are false may be apposed or contradicted.

All compound Propositions, except Copulatives and Discretives, are properly denied or contradicted when the Negation affects their conjunctive Particles; as, if the disjunctive Proposition as-

ferts

ferts, it is either Day or Night: The Opponent fays, It is not either Day or Night, or, it is not necessary that it should be either Day or Night; so the hypothetical Proposition is denied by saying, it does not follow that the Earth must move if the Sun be fix'd.

A disjunctive Proposition may be contradicted also by denying all the Parts, as, it is neither Day

nor Night.

And a causal Proposition may be denied or opposed indirectly and improperly, when either part of the Proposition is denied; and it must be false if either Part be false: But the Design of the Proposition being to shew the causal Connection of the two Parts, each Part is suppos'd to be true; and it is not properly contradicted as a caufal Proposition, unless one Part of it be denied to be the Cause of the other.

As for Copulatives and Discretives, because their Truth depends more on the Truth of their Parts, therefore these may be oppos'd or denied as many Ways, as the Parts of which they are compos'd may be denied; fo this copulative Proposition, Riches and Honour are Temptations to Pride, may be denied by faying, Riches are not Temptations, tho' Honour may be: or, Honour is not a Temptation, tho' Riches may be: or, neither Riches nor Honour are Temptations, &c.

So this discretive Proposition, Job was patient, tho' his Grief was great, is denied by faying, Job was not patient, tho' his Grief was great: or, Job was patient, but his Grief was not great: or, Job

was not patient, nor was his Grief great.

We proceed now to the fecond fort of compound Propositions, (viz.) such whose Composition is not expressed, but latent or conceal'd, yet a small Attention will find two Propositions included in them. Such are these that follow;

i. Exclusives;

1. Exclusives; as, The pious Man alone is happy. It is only Sir Isaac Newton could find out true Philosophy.

2. Exceptives; as, None of the Antients but, Plato well defended the Soul's Immortality. The

Protestants worship none but God.

3. Comparatives; as, Pain is the greatest Affliction. No Turk was fiercer than the Spaniards, at Mexico.

Here note, that the comparative Degree does not always imply the Positive; as if I say, A Fool is better than a Knave; this does not affirm that Folly is good, but that it is a less Evil than Knavery.

4. Inceptives and Desitives, which relate to the beginning or ending of any thing; as, the Latin Tongue is not yet forgotten. No Man before Orpheus wrote Greek Verse; Peter Czar of Mus-

covy begun to civilize his Nation.

To these may be added Continuatives; as, Rome remains to this Day, which includes at least two Propositions, (viz.) Rome was, and Rome is.

Here let other Authors spend Time and Pains in giving the precise Definitions of all these sorts of Propositions, which may be as well understood by their Names and Examples: Here let them tell what their Truth depends upon, and how they are to be opposed or contradicted; but a moderate Share of common Sense, with a Review of what is said on the former Compounds, will suffice for all these Purposes without the Formality of Rules.

SECT. VII.

Of true and false Propositions.

Propositions are next to be consider'd according to their Sense or Signification, and thus they are distributed into true and false. A true Proposition represents Things as they are in themselves; but if Things are represented otherwise than they are in themselves, the Proposition is false.

Or we may describe them more particularly thus; a true Proposition joins those Ideas and Terms together whose Objects are join'd and agree, or it disjoins those Ideas and Terms, whose Objects disagree or are disjoin'd; as, every Bird bas Wings,

a Brute is not immortal.

A false Proposition joins those Ideas or Terms whose Objects disagree, or it disjoins those whose Objects agree; as Birds bave no Wings, Brutes are immortal.

Note, It is impossible that the same Proposition should be both true and salse at the same Time, in the same Sense, and in the same Respect; because a Proposition is but the Representation of the Agreement or Disagreement of Things: Now it is impossible that the same Thing should be and not be, or that the same Things should agree and not agree at the same Time and in the same Respect. This is a first Principle of human Knowledge.

Yet some Propositions may seem to contradict one another, tho' they may be both true, but in different Senses or Respects or Times: as, Man was immortal in Paradise, and Man was mortal in Paradise. But these two Propositions must be refer'd to different Times; as, Man before his Fall

was immortal, but at the Fall he became mortal. So we may fay now, Man is mortal, or Man is immortal, if we take these Propositions in different Respects; as, Man is an immortal Creature as to his Soul, but mortal as to his Body. A great Variety of Difficulties and seeming Contradictions, both in holy Scripture and other Writings, may

be folved and explain'd in this manner.

The most important Question on this Subject is this, What is the Criterion or distinguishing Mark of Truth? How shall we know when a Proposition is really true or false? There are so many Disguises of Truth in the World, so many false Appearances of Truth, that some Sects have declared there is no Possibility of distinguishing Truth from Falfbood; and therefore they have abandon'd all Pretences to Knowledge, and maintain'd stre-

muously that nothing is to be known.

The first Men of this Humour made themselves famous in Greece, by the Name of Scepticks; that is, Seekers: They were also call'd Academicks, borrowing their Name from Academia, their School or Place of Study. They taught that all Things are uncertain, tho' they allow'd that some are more probable than others. After these arose the Sect of Pyrrhonicks, named from Pyrrhotheir Master, who would not allow one Proposition to be more probable than another; but profes'd that all Things were equally uncertain. Now all these Men (as an ingenious Author expresses it) were rather to be call'd a Sect of Liars than Philosoft phers, and that Censure is just for two Reasons; (1.) Because they determined concerning every Proposition that it was uncertain, and believed that as a certain Truth, while they professed there was nothing certain, and that nothing could be determined concerning Truth or Falshood; and thus C. II. S. 7. The right Use of Reason. 173

thus their very Doctrine gave itself the Lie. (2.) Because they judged and acted as other Men did in the common Affairs of Life; they would neither run into Fire nor Water, tho' they profess'd Ignorance and Uncertainty, whether the one would burn, or the other drown them.

There have been fome in all Ages who have too much affected this Humour, who dispute a-gainst every thing, under Pretence that Truth has no certain Mark to distinguish it. Let us therefore enquire, what is the general Criterion of Truth? And in order to this, it is proper to consider what is the Reason why we assent to those Propositions, which contain the most certain and indubitable Truths, such as these, the Whole is greater than a Part; two and three make five.

The only Reason why we believe these Propositions to be true, is because the Ideas of the Subjects and Predicates appear with fo much Clear-ness and Strength of Evidence to agree to each other, that the Mind cannot help discerning the Agreement, and cannot really doubt of the Truth of them, but is constrain'd to judge them true. So when we compare the Ideas of a Circle and a Triangle, or the Ideas of an Oyster and a Butterfly, we see such an evident Disagreement between them, that we are fure that a Butterfly is not an Oyster; nor is a Triangle a Circle. There is nothing but the Evidence of the Agreement or Difagreement between two Ideas, that makes us affirm or deny the one or the other.

Now it will follow from hence, that a clear and distinct Perception or full Evidence of the Agreement and Disagreement of our Ideas to one another, or to things, is a certain Criterion of Truth: For since our Minds are of such a Make, that where the Evidence is exceeding plain and strong, we cannot

withold

withold our Affent; we should then be necessarily exposed to believe Falshood, if compleat Evidence should be found in any Propositions that are not true. But surely the God of perfect Wisdom, Truth and Goodness would never oblige his Creatures to be thus deceived; and therefore he would never have constituted us of such a Frame, as would render it naturally impossible to guard against Error.

Another Consequence is naturally deriv'd from the former; and that is, that the only Reason why we fall into a Mistake is because we are impatient to form a Judgment of Things before we have a clear and evident Perception of their Agreement or Disagreement; and if we will make Haste to judge while our Ideas are obscure and confus'd, or before we see whether they agree or disagree, we shall plunge our selves into perpetual

Errors.

Note, What is here afferted concerning the Necessity of clear and distinct Ideas refers chiefly to Propositions, which we form our selves by our own Powers: As for Propositions which we derive from the Testimony of others, they will be accounted for in Chap. IV.

SECT. VIII.

Of certain and dubious Propositions, of Knowledge and Opinion.

Since we have found that Evidence is the great Criterion and the fure Mark of Truth; this leads us directly to confider Propositions according to their Evidence; and here we must take Notice both of the different Degrees of Evidence, and the different Kinds of it.

Propositions

Propositions according to their different Degrees of Evidence are distinguish'd into certain and dubious *.

Where the Evidence of the Agreement or Difagreement of the Ideas is so strong and plain, that we cannot forbid nor delay our Assent; the Proposition is call'd certain, as, every Circle hath a Centre; the World did not create itself. An Assent to such Propositions is honour'd with the Name of

Knowledge.

But when there is any Obscurity upon the A-greement or Disagreement of the Ideas, so that the Mind does not clearly perceive it, and is not compelled to assent or dissent, then the Proposition, in a proper and philosophical Sense, is called doubtful or uncertain; as, the Planets are inhabited; the Souls of Brutes are mere Matter; the World will not stand a thousand Years longer; Dido built the City of Carthage, &c. Such uncertain Propositions are called Opinions.

When we consider our selves as Philosophers or Searchers of Truth, it would be well if we always suspended a sull Judgment or Determination about any thing, and made farther Inquiries, where this plain and perfect Evidence is wanting; but we are so prone of our selves to judge without sull Evidence, and in some Cases the Necessity of Action in the Affairs of Life constrains us to judge and determine upon a tolerable Degree of Evidence, that we vulgarly call those Propositions

Mind, the Divison belongs to Propositions rather according to the Degrees of our Assent, than the Degrees of Evidence. But it may well be answered, that the Evidence here intended is that which appears so to the Mind, and not the mere Evidence in the Nature of Things: Besides (as we shall show immediately) the Degree of Assent ought to be exactly proportionable to the Degree of Evidence; and therefore the Difference is not great, whether Propositions be call'd certain or uncertain, according to the Measure of Evidence, or of Assent.

certain, where we have but very little Room or Renson to doubt of them, tho' the Evidence be

not compleat and refiftless.

Certainty according to the Schools is distinguished into Objective and Subjective. Objective Certainty is when the Proposition is certainly true in it self; and Subjective, when we are certain of the Truth of it. The one is in Things, the other is in our Minds.

But let it be observed here, that every Proposition in itself is certainly true or certainly false. For tho' Doubtfulness or Uncertainty seems to be a Medium between certain Truth and certain Falshood in our Minds, yet there is no such Medium in Things themselves; no, not even in suture Events: for now at this time it is certain in itself, that Midsummer-Day seven Years hence will be serene, or it is certain it will be cloudy, tho' we are uncertain and utterly ignorant what fort of Day it will be: This Certainty of distant Futurities is known to God only.

Uncertain or dubious Propositions, i. c. Opinions,

are distinguish'd into probable or improbable.

When the Evidence of any Proposition is greater than the Evidence of the contrary, then it is a probable Opinion: Where the Evidence and Arguments are stronger on the contrary Side, we call it improbable. But while the Arguments on either Side seem to be equally strong, and the Evidence for and against any Proposition appears equal to the Mind, then in common Language we call it a doubtful Matter. We also call it a dubious or doubtful Proposition when there are no Arguments on either Side, as next Christmas-Day will be a very sharp Frost. And in general all these Propositions are doubtful, wherein we can perceive

ceive no sufficient Marks or Evidences of Truth or Falshood. In such a Case the Mind which is searching for Truth ought to remain in a State of Doubt and Suspence, until superior Evidence on one Side or the other incline the Balance of the Judgment, and determine the Probability or Certainty to one Side.

A great many Propositions which we generally believe or disbelieve in human Affairs or in the Sciences have very various Degrees of Evidence, which yet arise not to compleat Certainty either of Truth or Falshood. Thus it comes to pass that there are such various and almost infinite Degrees of Probability and Improbability. To a weak Probability we should give a weak Assent; and a stronger Assent is due where the Evidence is greater, and the Matter more probable. If we proportion our Assent in all Things to the Degree of Evidence, we do the utmost that human Nature is capable of in a rational Way to secure it self from Error.

SECT. IX.

Of Sense, Consciousness, Intelligence, Reason, Faith and Inspiration.

Propositions in the various Degrees of it, we come to survey the several Kinds of Evidence, or the different Ways whereby Truth is let into the Mind, and which produce accordingly several kinds of Knowledge. We shall distribute them into these six (viz.) Sense, Consciousness, Intelligence, Reason, Faith and Inspiration, and then distinguish the Propositions which are derived from them.

N I. The

I. The Evidence of Sense is when we frame a Proposition according to the Dictate of any of our Senses; so we judge that Grass is green; that a Trumpet gives a pleasant Sound; the Fire burns Wood; Water is foft, and Iron is hard; for we have seen, heard or felt all these. It is upon this Evidence of Sense that we know and believe the daily Occurrences in human Life; and almost all the Histories of Mankind that are written by Eve or Ear-Witnesses are built upon this Principle.

Under the Evidence of Sense we don't only include that Knowledge which is derived to us by our outward Senses of Hearing, Seeing, Feeling, Tasting and Smelling, but that also which is deriv'd from the inward Senfations and Appetites of Hunger, Thirst, Ease, Pleasure, Pain, Weariness, Rest, &c. and all those Things which belong to the Body; as Hunger is a painful Appetite, Light is pleasant: Rest is sweet to the weary Limbs.
Propositions which are built on this Evidence

may be named sensible Propositions, or the Distates

of Sense.

II. As we learn what belongs to the Body by the Evidence of Sense, so we learn what belongs to the Soul by an inward Consciousness, which may be call'd a fort of internal Feeling, or spiritual Sensation of what passes in the Mind; as, I think before I speak; I desire large Knowledge; I I suspect my own Practice; I studied hard to Day; my Conscience bears Witness of my Sincerity; my Soul hates vain Thoughts; Fear is an uneasy Passion; long Meditation on one Thing is tiresome.

Thus it appears that we obtain the Knowledge of a Multitude of Propositions, as well as of single Ideas by those two Principles of Sensation and Reflection: One of them is a fort of Consciousness of what affects the Body, and the other is a Consciousness of what passes in the Mind.

Propositions which are built on this internal Consciousness, have yet no particular or distinguish-

ing Name assign'd to them.

III. Intelligence relates chiefly to those abstracted Propositions which carry their own Evidence with them, and admit no Doubt about them. Our Perception of this Self-Evidence in any Proposition is call'd Intelligence. It is our Knowledge of those first Principles of Truth which are (as it were) wrought into the very Nature and Make of our Minds: They are so evident in themfelves to every Man who attends to them, that they need no Proof. It is the Prerogative and peculiar Excellence of these Propositions, that they can scarce ever be prov'd or denied: They cannot easily be prov'd, because there is nothing suppos'd to be more clear or certain, from which an Argument may be drawn to prove They cannot well be denied, because their own Evidence is fo bright and convincing, that as foon as the Terms are understood the Mind necessarily assents: Such are these, Whatfoever atteth bath a Being; Nothing has no Properties; a Part is less than the Whole; Nothing can be the Cause of itself.

These Propositions are call'd Axioms, or Maxims, or first Principles; these are the very Foundations of all improv'd Knowledge and Reasonings, and on this Account these have been thought to be innate Propositions, or Truths born with us.

Some suppose that a great Part of the Know-ledge of Angels and human Souls in the separate State is obtained in this manner (viz.) by such an immediate View of Things in their own Nature, which is call'd *Intuition*.

IV. Reasoning is the next fort of Evidence, and that is when one Truth is inferr'd or drawn from others by natural and just Methods of Argument; as, if there be much Light at Midnight, I infer, it proceeds from the Moon, because the Sun is under the Earth. If I see a Cottage in a Forest, I conclude, some Man has been there and built it. Or when I survey the Heavens and Earth, this gives Evidence to my Reason, that there is a God who made them.

The Propositions which I believe upon this kind of Evidence, are call'd Conclusions, or rational Truths, and the Knowledge that we gain this

Way is properly call'd Science.

Yet let it be noted, that the Word Science is usually applied to a whole Body of regular or methodical Observations or Propositions which learned Men have formed concerning any Subject of Speculation, deriving one Truth from another by a Train of Arguments. If this Knowledge chiefly directs our Practice, it is usually call'd an Art: And this is the most remarkable Distinction between an Art and a Science, (viz.) the one refers chiefly to Practice, the other to Speculation. Natural Philosophy or Physicks, and Ontology are Sciences, Logick and Rhetorick are call'd Arts; but Mathematics include both Art and Science; for they have much of Speculation, and much of Practice in them.

C. II. S. 9. The right Use of Reason. 181

Observe here, that when the Evidence of a Proposition deriv'd from Sense, Consciousness, Intelligence, or Reason is firm and indubitable, it produces such an Assent as we call a natural Certainty.

V. When we derive the Evidence of any Proposition from the Testimony of others, it is call'd the Evidence of Faith; and this is a large Part of our Knowledge. Ten thousand Things there are which we believe merely upon the Authority or Credit of those who have spoken or written of them. It is by this Evidence that we know there is such a Country as China, and there was such a Man as Cicero who dwelt in Rome. It is by this that most of the Transactions in human Life are managed: We know our Parents and our Kindred by this Means, we know the Persons and Laws of our present Governors, as well as Things that are at a vast Distance from us in foreign Nations, or in antient Ages.

According as the Persons that inform us of any thing are many or sew, are more or less wise, and faithful, and credible, so our *Faith* is more or less firm or wavering, and the *Proposition believed* is either certain or doubtful; but in Matters of *Faith* an exceeding great Probability is call'd a *moral Certainty*.

Faith is generally distinguished into Divine and Human, not with Regard to the Propositions that are believed, but with Regard to the Testimony upon which we believe them. When God reveals any thing to us, this gives us the Evidence of Divine Faith; but what Man only acquaints us with produces a human Faith in us; the one, being built upon the Word of Man, arises but to moral Certainty; but the other, being founded on N 2 the

the Word of God, arises to an absolute and infallible Assurance, so far as we understand the Meaning of his Word. This is call'd supernatural Cer-

tainty.

Propositions which we believe upon the Evidence of human Testimony are call'd Narratives, Relations, Reports, Historical Observations, &c. but such as are built on Divine Testimony are termed Matters of Revelation; and if they are of great Importance in Religion, they are call'd Articles of Faith.

There are some Propositions, or Parts of Know-ledge, which are said to be deriv'd from Observation and Experience, that is, Experience in our selves, and the Observations we have made on other Persons or Things; but these are made up of some of the former Springs of Knowledge join'd together (viz.) Sense, Consciousness, Reason, Faith, &c. and therefore are not reckon'd a distinct kind of Evidence.

VI. Inspiration is a fort of Evidence distinct from all the former, and that is, when such an overpowering Impression of any Proposition is made upon the Mind by God himself, that gives a convincing and indubitable Evidence of the Truth and Divinity of it: So were the Prophets and the Apostles inspir'd *.

Sometimes God may have been pleafed to make use of the outward Senses, or the inward Workings of the Imagination, of Dreams, Apparitions, Visions and Voices, of Reasoning, or perhaps human Narration, to convey divine Truths to the Mind of the Prophet; but none of these would be sufficient to deserve the Name of Inspiration,

^{*} Note here, I speak chiefly of the highest Kind of Inspiration.

without a superior divine Light and Power attending them.

This fort of Evidence is also very distinct from what we usually call Divine Faith; for every common Christian exercises Divine Faith when he believes any Proposition which God has revealed in the Bible upon this Account, because God has said it, tho' it was by a Train of Reasonings that he was led to believe that this is the Word of God: Whereas in the Case of Inspiration, the Prophet not only exercises Divine Faith in believing what God reveals, but he is under a fuperior heavenly Impression, Light and Evidence, whereby he is affured that God reveals it. This is the most eminent kind of supernatural Certainty.

Tho' Persons might be assured of their own Inspiration by some peculiar and inexpressible Consciousness of this divine Impression and Evidence in their own Spirits, yet it is hard to make out this Inspiration to others, and to convince them of it, except by some antecedent or consequent Prophecies or Miracles, or some publick Appear-

ances more than human.

The Propositions which are attain'd by this fort of Evidence are call'd in/pir'd Truths. This is Divine Revelation at first hand, and the Dictates of God in an immediate manner, of which Theological Writers discourse at large; but since it belongs only to a few Favourites of Heaven to be inspir'd, and not the Bulk of Mankind, it is not necessary to speak more of it in a Treatise of Logick, which is delign'd for the general Improvement of human Reason.

The various kinds of Evidence, upon which we believe any Proposition, afford us these three Remarks.

I. Remark. The same Proposition may be known to us by different kinds of Evidence: That the whole is bigger than a part is known by our Senses, and it is known by the Self-Evidence of the thing to our Mind. That God created the Heavens and the Earth is known to us by Reason, and is known also by Divine Testimony or Faith.

He Remark. Among these various Kinds of Evidence, some are generally stronger than others in their own Nature, and give a better Ground for Certainty. Inward Consciousness and Intelligence, as well as Divine Faith and Inspiration, usually carry much more Force with them than Sense or human Faith, which are often fallible; tho' there are Instances wherein human Faith, Sense and Reasoning lay a Foundation also for compleat Assurance, and leave no room for Doubt.

Reason in its own Nature would always lead us

into the Truth in Matters within its Compass, if it were us'd aright, or it would require us to sufpend our Judgment where there is want of Evidence. But it is our Sloth, Precipitancy, Sense, Passion, and many other Things that lead our Reason astray in this degenerate and impersect Estate: Hence it comes to pass that we are guilty of so many Errors in Reasoning, especially about divine Things, because our Reason either is busy to enquire, and resolv'd to determine about Matters that are above our present Reach; or because we mingle many Prejudices and secret Insluences of Sense, Fancy, Passion, Inclination, &c. with

our Exercises of Reason, and judge and determine

according to these irregular Influences.

Divine Faith would never admit of any Controversies or Doubtings, if we were but assur'd that God had spoken, and that we rightly understood his Meaning.

IIId Remark. The greatest Evidence and Certainty of any Proposition does not depend upon the Variety of the Ways or Kinds of Evidence, whereby it is known, but rather upon the Strength and Degree of Evidence, and the Clearness of that Light in or by which it appears to the Mind. For a Proposition that is known only one Way may be much more certain, and have stronger Evidence than another that is suppos'd to be known many Ways. Therefore these Propositions, Nothing has no Properties, Nothing can make itself, which are known only by Intelligence, are much furer and truer than this Proposition, The Rainbow has real and inherent Colours in it, or than this, the Sun rolls round the Earth; tho' we feem to know both these last by our Senses, and by the common Testimony of our Neighbours. So any Proposition that is clearly evident to our own Consciousness or Divine Faith, is much more certain to us than a thousand others that have only the Evidence of feeble and obscure Sensations, of mere probable Reasonings and doubtful Arguments, or the Witness of fallible Men, or even tho' all these should join together.

CHAP. III.

The Springs of false Judgment, or the Doctrine of Prejudices.

INTRODUCTION.

have survey'd the several Sorts of Evidence, on which we build our Assent to Propositions: These are indeed the general Grounds upon which we form our Judgments concerning Things. What remains in this second Part of Logick is to point out the several Springs and Causes of our Mistakes in judging, and to lay down some Rules by which we should conduct our selves in passing a Judgment of every thing that is proposed to us.

I confess many Things which will be mentioned in these following Chapters might be as well referr'd to the third Part of Logick, where we shall treat of Reasoning and Argument; for most of our false Judgments seem to include a secret bad Reasoning in them; and while we show the Springs of Error, and the Rules of true Judgment, we do at the same time discover which Arguments are fallacious, which Reasonings are weak, and which are just and strong. Yet since this is usually called a judging ill, or judging well, I think we may without any Impropriety treat of it here; and this will lay a surer Foundation for all sorts of Ratiocination and Argument.

Rash Judgments are call'd Prejudices, and so are the Springs of them. This Word in common Life signifies an ill Opinion which we have conceived

conceived of some other Person, or some Injury done to him. But when we use the Word in Matters of Science, it signifies a Judgment that is formed concerning any Person or Thing before sufficient Examination; and generally we suppose it to mean a false Judgment or Mistake: At least, it is an Opinion taken up without solid Reason for it, or an Assent given to a Proposition before we have just Evidence of the Truth of it, tho' the thing itself may happen to be true.

Sometimes these rash Judgments are call'd *Pre-possessions*, whereby is meant, that some particular Opinion has possessed the Mind, and engag'd the Assent without sufficient Search or Evidence of

the Truth of it.

There is a vast Variety of these Prejudices and Prepossessions which attend Mankind in every Age and Condition of Life; they lay the Foundations of many an Error, and many an unhappy Practice, both in the Affairs of Religion, and in our civil Concernments, as well as in Matters of Learning. It is necessary for a Man who pursues Truth to enquire into these Springs of Error, that as far as possible he may rid himself of old Prejudices, and watch hourly against new ones.

The Number of them is so great, and they are so interwoven with each other, as well as with the Powers of human Nature, that it is sometimes hard to distinguish them apart; yet for Method Sake we shall reduce them to these sour general Heads, (viz.) Prejudices arising from Things, or from Words, from ourselves, or from other Persons; and after the Description of each Prejudice, we shall propose one or more Ways of curing it.

SECT. I.

Prejudices arising from Things.

THE first sort of Prejudices are those which arise from the Things themselves about which we judge. But here let it be observed that there is nothing in the Nature of Things that will necessarily lead us into Error, if we do but use our Reason aright, and withhold our Judgment till there appear sufficient Evidence of Truth. But since we are so unhappily prone to take Advantage of every doubtful Appearance and Circumstance of Things to form a wrong Judgment, and plunge our selves into Mistake, therefore it is proper to consider what there is in the Things themselves that may occasion our Errors.

I. The Obscurity of some Truths, and the Dissiculty of searching them out, is one Occasion of rash

and mistaken Judgment.

Some Truths are difficult because they lye remote from the first Principles of Knowledge, and want a long Chain of Argument to come at them: Such are many of the deep Things of Algebra and Geometry, and some of the Theorems and Problems of most Parts of the Mathematics. Many Things also in natural Philosophy are dark and intricate upon this Account, because we cannot come at any certain Knowledge of them without the Labour of many and difficult, as well as chargeable Experiments.

There are other Truths which have great Dark-nefs upon them, because we have no proper Means or Mediums to come at the Knowledge of them. Tho' in our Age we have found out many of the

C. III. S. 1. The right Use of Reason. 189

deep Things of Nature by the Assistance of Glasses and other Instruments; yet we are not hither-to arrived at any sufficient Methods to discover the Shape of those little Particles of Matter which distinguish the various Sapours, Odours and Colours of Bodies; nor to find what fort of Atoms compose Liquids or Solids, and distinguish Wood, Minerals, Metals, Glass, Stone, &c. There is a Darkness also lies upon the Actions of the intellectual or angelical World; their Manners of Subsistence and Agency, the Power of Spirits to move Bodies, and the Union of our Souls with this animal Body of ours are much unknown to us on this Account.

Now in many of these Cases a great part of Mankind is not content to be entirely ignorant; but they rather choose to form rash and hasty Judgments, to guess at Things without just Evidence, to believe something concerning them before they can know them, and thereby they fall into Error.

This fort of *Prejudice*, as well as most others, is cured by *Patience* and *Diligence*, in *Inquiry* and *Reasoning*, and a *Suspension of Judgment* till we have attain'd some proper *Mediums* of Knowledge, and till we see sufficient Evidence of the Truth.

II. The Appearance of Things in a Difguise is another Spring of Prejudice or rash Judgment. The Outside of Things which first strikes us is oftentimes different from their inward Nature, and we are tempted to judge suddenly according to outward Appearances. If a Picture is daub'd with many bright and glaring Colours, the vulgar Eve admires it as an excellent Piece; whereas the same Person judges very contemptuously of

fome admirable Design sketch'd out only with a black Pencil on a coarse Paper, tho' by the Hand of Raphael. So the Scholar spies the Name of a new Book in a publick News-Paper, he is charmed with the Title, he purchases, he reads with huge Expectations, and finds it all Trash and Impertinence: This is a Prejudice deriv'd from the Appearance; we are too ready to judge that Volume valuable which had so good a Frontispiece. The large Heap of Encomiums and swelling Words of Assurance that are bestowed on Quack-Medicines in publick Advertisements tempt many a Reader to judge them infallible, and to use the Pills or the Plaister with vast Hope and frequent

Disappointment.

We are tempted to form our Judgment of Perfons as well as Things by these outward Appearances. Where there is Wealth, Equipage and Splendor, we are ready to call that Man happy, but we fee not the vexing Disquietudes of his Soul: And when we spy a Person in ragged Garments, we form a despicable Opinion of him too suddenly, we can hardly think him either happy or wife, our Judgment is fo thrangely biass'd by outward and sensible Things. It was thro' the Power of this Prejudice that the Jews rejected our bleffed Saviour; they could not fuffer themselves to believe that the Man who appear'd as the Son of a Carpenter was also the Son of God. And because St. Paul was of a little Stature, a mean Presence, and his Voice contemptible, some of the Corinthians were tempted to doubt whether he were inspired or no. This Prejudice is cur'd by a longer Acquaintance with the H'orld, and a just Observation that Things are sometimes better and sometimes worse than they appear to be. We ought therefore to restrain our excessive Forwardness to form our Opinion

pinion of Persons or Things before we have Opportunity to search into them more persectly. Remember that a grey Beard does not make a Philosopher; all is not Gold that glisters; and a rough Diamond may be worth an immense Sum.

III. A Mixture of different Qualities in the same thing is another Temptation to judge amis. We are ready to be carried away by that Quality which strikes the first or the strongest Impressions upon us, and we judge of the whole Object according to that Quality, regardless of all the rest; or sometimes we colour over all the other Qualities with that one Tincture, whether it be bad or good.

When we have just Reason to admire a Man for his Virtues, we are sometimes inclin'd not only to neglect his Weaknesses, but even to put a good Colour upon them, and to think them amiable. When we read a Book that has many excellent Truths in it and Divine Sentiments, we are tempted to approve not only that whole Book, but even all the Writings of that Author. When a Poet, an Orator or a Painter has perform'd admirably in several illustrious Pieces, we sometimes also admire his very Errors, we mistake his Blunders for Beauties, and are so ignorantly fond as to copy after them.

It is this Prejudice that has render'd so many great Scholars perfect Bigots, and inclin'd them to defend Homer or Horace, Livy or Cicero, in all their Mistakes, and vindicate all the Follies of their favourite Author. It is this that tempts some great Writers to support the Sayings of almost all the ancient Fathers of the Church, and admire them

even in their very Reveries.

On the other hand, if an Author has profes'd heretical Sentiments in Religion, we throw our Scorn upon every thing he writes, we despise even his critical or mathematical Learning, and will hardly allow him common Sense. If a Poem has some Blemishes in it, there is a Set of false Criticks who decry it universally, and will allow no Beauties there.

This fort of Prejudice is relieved by learning to distinguish Things well, and not to judge in the There is scarce any Thing in the World of Nature or Art, in the World of Morality or Religion, that is perfectly uniform. There is a Mixture of Wisdom and Folly, Vice and Virtue, Good and Evil, both in Men and Things. We should remember that some Persons have great Wit and little Judgment; others are judicious, but not witty. Some are good humour'd without Compliment; others have all the Formalities of Complaifance, but no good Humour. We ought to know that one Man may be vicious and learned, while another has Virtue without Learning: That many a Man thinks admirably well who has a poor Utterance; while others have a charming manner of Speech, but their Thoughts are trifling and impertinent. Some are good Neighbours, and courteous and charitable toward Men who have no Piety toward God; others are truly religious, but of a morose natural Temper. Some excellent Sayings are found in very filly Books, and some filly Thoughts appear in Books of Value. We should neither praise nor dispraise by Wholesale, but separate the Good from the Evil, and judge of them apart: The Accuracy of a good Judgment contitts much in making fuch Distinctions.

Yet let it be noted too, that in common Difcourse we usually denominate Persons and Things according to the major Part of their Character. He is to be call'd a wise Man who has but sew Follies: He is a good Philosopher who knows much of Nature, and for the most Part reasons well in Matters of human Science: And that Book should be esteem'd well written, which has much more of good Sense in it than it has of Impertinence.

IV. Tho' a Thing be uniform in its own Nature, yet the different Lights in which it may be placed, and the different Views in which it appears to us, will be ready to excite in us mistaken Judgments concerning it. Let an crect Cone be placed in a horizontal Plane, at a great Distance from the Eye, and it appears a plain *Triangle*; but we shall judge that very Cone to be nothing but a flat Circle, if its Base be obverted towards us. Set a common round Plate a little obliquely before our Eye, and we shall think it an oval Figure; but if the very Edge of it be turned toward us, we shall take it for a firait Line: So when we view the feveral Folds of a changeable Silk, we pronounce this Part red, and that yellow, because of its different Position to the Light, tho' the Silk laid smooth in one Light appears all of one Colour.

When we survey the Miseries of Mankind, and think of the Sorrows of Millions, both on Earth and in Hell, the Divine Government has a terrible Aspect, and we may be tempted to think hardly even of God himself: But if we view the Profusion of his Bounty and Grace amongst his Creatures on Earth, or the happy Spirits in Heaven, we shall have so exalted an Idea of his Goodness as to forget his Vengeance. Some Men dwell entirely

tirely upon the Promises of his Gospel, and think him all Mercy; Others, under a melancholy Frame, dwell upon his Terrors and his Threatnings, and are overwhelmed with the Thought of his Severity and Vengeance, as tho' there were no Mercy in him.

The true Method of delivering ourselves from this Prejudice is to compare all the various Appearances of the same thing with one another, and let each of them have its full Weight in the Balance of our Judgment, before we fully determine our Opinion. It was by this Means that the modern Astronomers came to find out that the Planet Saturn hath a flat broad Circle round its Globe. which is call'd its Ring, by observing the different Appearances, as a narrow, or a broader Oval, or as it sometimes seems to be a strait Line, in the different Parts of its twenty nine Years Revolution thro' the Ecliptic. And if we take the same just and religious Survey of the great and blessed God in all the Discoveries of his Vengeance and his Mercy, we shall at last conclude him to be both just and good.

V. The casual Association of many of our Ideas becomes the Spring of another Prejudice or rash Judgment, to which we are sometimes expos'd. If in our younger Years we have taken Medicines that have been nauseous, when any Medicine whatsoever is afterward propos'd to us under Sickness, we immediately judge it nauseous: Our Fancy has so closely join'd these Ideas together, that we know not how to separate them: Then the Stomach seels the Disgust, and perhaps resules the only Drug that can preserve Life. So a Child who has been let Blood joins the Ideas of Pain and the Surgeon together, and he hates the Sight

C. III. S. 2. The right Use of Reason. 195

of the Surgeon, because he thinks of his Pain: Or if he has drunk a bitter Potion, he conceives a bitter Idea of the Cup which held it, and will

drink nothing out of that Cup.

It is for the same Reason that the Bulk of the common People are so superstitiously fond of the Psalms translated by Hopkins and Sternhold, and think them sacred and divine, because they have been now for more than an hundred Years bound

up in the same Covers with our Bibles.

The best Relief against this Prejudice of Association is to consider, whether there be any natural and necessary Connection between those Ideas which Fancy, Custom, or Chance hath thus join'd together: And if Nature has not join'd them, let our Judgment correct the Folly of our Imagination, and separate these Ideas again.

SECT. II.

Prejudices arising from Words.

UR Ideas and Words are so linkt together, that while we judge of Things according to Words, we are led into several Mistakes. These may be distributed under two general Heads, (viz.) Such as arise from single Words or Phrases, or such as arise from Words join'd in Speech, and composing a Discourse.

I. The most eminent and remarkable Errors of the stirst Kind, are these three. (1.) When our Words are insignificant, and have no Ideas; as when the mystical Divines talk of the Prayer of Silence, the supernatural and passive Night of the Soul, the Vacuity of Powers, the Suspension of all Thoughts: Or (2.) When our Words are equivo-

O 2 cal.

cal, and fignify two or more Ideas, as the Words Law, Light, Flesh, Spirit, Righteousness, and many other Terms in Scripture: Or (3.) When two or three Words are synonymous, and fignify one Idea, as Regeneration and new Creation in the new Testament; both which mean only a Change of Heart from Sin to Holiness; or as the Elector of Cologne and the Bishop of Cologne are two Titles of the same Man.

These kinds of Phrases are the Occasions of various Mistakes; but none so unhappy as those in Theology: For both Words without Ideas, as well as synonymous and equivocal Words, have been us'd and abus'd by the Humours, Passions, Interests, or by the real Ignorance and Weakness of Men to beget terrible Contests among Chrittians.

But to relieve us under all those Dangers, and to remove these forts of Prejudices which arise from single Words or Phrases, I must remit the Render to Part I. Chap. 4. where I have treated about Words, and to those Directions which I have given concerning the Definition of Names, Part I. Chap. 6. Sect. 3.

II. There is another fort of false Judgments or Mistakes which we are expos'd to by Words; and that is, when they are join'd in Speech, and compose a Discourse; and here we are in Danger two

Ways.

The one is, when a Man writes good Senfe, or speaks much to the Purpose, but he has not a happy and engaging manner of Expression. Perhaps he uses coarse and vulgar Words, or old, obsolete, and unfashionable Language, or Terms and Phrases that are foreign, latiniz'd, scholastick, very uncommon, and hard to be understood: And this

this is still worse, if his Sentences are long and intricate, or the Sound of them harsh and grating to the Ear. All these indeed are Defects in Style, and lead fome nice and unthinking Hearers or Readers into an ill Opinion of all that fuch a Person speaks or writes. Many an excellent Discourse of our Forefathers has had Abundance of Contempt cast upon it by our modern Pretenders to Sense, for want of their distinguishing between

the Language and the Ideas.

On the other hand, when a Man of Eloquence speaks or writes upon any Subject, we are too ready to run into his Sentiments, being sweetly and insensibly drawn by the Smoothness of his Harangue, and the pathetic Power of his Language. Rhetorick will varnish every Error that it shall appear in the Dress of Truth, and put such Ornaments upon Vice as to make it look like Virtue: It is an Art of wondrous and extensive Influence; it often conceals, obscures or overwhelms the Truth, and places fometimes a gross Falshood in a most alluring Light. The Decency of Action, the Musick of the Voice, the Harmony of the Periods, the Beauty of the Stile, and all the engaging Airs of the Speaker, have often charm'd the Hearers into Error, and perfuaded them to approve whatfoever is propos'd in fo agreeable a manner. A large Affembly stands expos'd at once to the Power of these Prejudices, and imbibes them all. So Cicero and Demosthenes made the Romans and the Athenians believe almost whatsoever they pleased.

The best Desence against both these Dangers is to learn the Skill (as much as possible) of Jeparating our Thoughts and Ideas from IV ords and Phrases, to judge of Things in their own Natures, and in their natural or just Relation to one anther, abstracted from the Use of Language, and to maintain a steady and obstinate Resolution to hearken to nothing but Truth, in whatsoever

Style or Drefs it appears.

Then we shall hear a Sermon of pious and just Sentiments with Esteem and Reverence, the the Preacher has but an unpolish'd Style, and many Defects in the manner of his Delivery. Then we shall neglect and disregard all the flattering Infinuations whereby the Orator would make Way for his own Sentiments to take Possession of our Souls, if he has not solid and instructive Sense equal to his Language. Oratory is a happy Talent when it is rightly employed to excite the Passions to the Practice of Virtue and Piety; but to speak properly, this Art has nothing to do in the Search after Truth.

SECT. III.

Prejudices arising from ourselves.

Either Words nor Things would so often lead us astray from Truth, if we had not within our selves such Springs of Error as these that follow.

I. Many Errors are derived from our Weakness of Reason, and Incapacity to judge of Things in our infant State. These are call'd the Prejudices of Infancy. We frame early Mistakes about the common Objects which surround us, and the common Affairs of Life: We fancy the Nurse is our best Friend, because Children receive from their Nurses their Food and other Conveniencies of Life. We judge that Books are very unpleasant Things, because perhaps we have been driven to them

them by the Scourge. We judge also that the Skie touches the distant Hills, because we cannot inform our selves better in Childhood. We believe the Stars are not risen till the Sun is set, because we never see them by Day. But some of these Errors may seem to be deriv'd from the next Spring.

The Way to cure the *Prejudices of Infancy* is to diffinguish, as far as we can, which are those Opinions which we fram'd in perfect Childhood, to remember that at that Time our Reason was uncapable of forming a right Judgment, and to bring these Propositions again to be examined at

the Bar of maturer Reason.

II. Our Senses give us many a false Information of Things, and tempt us to judge amis. This is call'd the Prejudice of Sense, as when we suppose the Sun and Moon to be flat Bodies, and to be but a few Inches broad, because they appear so to the Eye. Sense inclines us to judge that Air has no Weight, because we don't feel it press heavy upon us; and we judge also by our Senses that Cold and Heat, Sweet and Sour, Red and Blue, &c. are such real Properties in the Objects themselves, and exactly like those Sensations which they excite in us.

Note, Those Mistakes of this fort which all Mankind drop and lose in their advancing Age are call'd meer *Prejudices of Infancy*, but those which abide with the vulgar Part of the World, and generally with all Men, till Learning and Philosophy cure them, more properly retain the Name

of Prejudices of Sense.

These Prejudices are to be remov'd several Ways.

(1.) By the Assistance of one Sense we cure the Mistakes of another, as when a Stick thrust into the

the Water feems crooked, we are prevented from judging it to be really so in itself, for when we take it out of the Water, both our Sight and our Feeling agree and determine it to be strait. (2.) The Exercise of our Reason and an Application to mathematical and philosophical Studies cures many other Prejudices of Sense, both with Relation to the heavenly and earthly Bodies. (3.) We thould remember that our Senses have often deceiv'd us in various Instances, that they give but " a confus'd and imperfect Representation of things in many Cases, that they often represent falfly those very Objects to which they seem to be suited, such as the Shape, Motion, Size and Situation, of gross Bodies, if they are but placed at a Diftance from us; and as for the minute Particles of which Bodies are compos'd, our Senses cannot distinguish them. (4.) We should remember also that one prime and original Design of our Senses is to inform us what various Relations the Bodies that are round about us bear to our own animal Body, and to give us Notice what is pleafant and useful, or what is painful and injurious to us; but they are not sufficient of themselves to lead us into a philosophical Acquaintance with the inward Nature of Things. It must be confess'd it is by the Assistance of the Eye and the Ear especially (which are call'd the Senses of Discipline) that our Minds are furnish'd with various Parts of Knowledge, by reading, hearing, and observing Things divine and human; yet Reason ought always to accompany the Exercise of our Senses whenever we would form a just Judgment of Things propos'd to our Enquiry.

Here it is proper to observe also, that as the Weakness of Reason in our Infancy, and the Dictates of our Senses sometimes in advancing Years,

lead

lead the wifer part of Mankind aftray from Truth; fo the meaner Parts of our Species, Persons whose Genius is very low, whose Judgment is always weak, who are ever indulging the Distates of Sense and Humour, are but Children of a larger Size; they stand expos'd to everlasting Mistakes in Life, and live and die in the midst of Prejudices.

III. Imagination is another fruitful Spring of false Judgments. Our Imagination is nothing else but the various Appearances of our sensible Ideas in the Brain, where the Soul frequently works in uniting, disjoining, multiplying, magnifying, di-minishing and altering the several Shapes, Colours, Sounds, Motions, Words and Things that have been communicated to us by the outward Organs of Sense. It is no Wonder therefore if Fancy lead us into many Mistakes, for it is but Sense at lecond Hand. Whatever is strongly imprest upon the Imagination some Persons believe to be true. Some will choose a particular Number in a Lottery, or lay a large Wager on a fingle Chance of a Dye, and doubt not of Success, because their Fancy feels so powerful an Impression, and assures them it will be prosperous. A thousand pretended Prophesies and Inspirations, and all the Freaks of Enthusiasm have been derived from this Spring. Dreams are nothing else but the Deceptions of Fancy: A Delirium is but a short Wildness of the Imagination; and a fettled Irregularity of Fancy is Distraction and Madness.

One Way to gain a Victory over this unruly Faculty, is to fet a Watch upon it perpetually, and to bridle it in all its Extravagances; never to believe any thing merely because Fancy dictates it, any more than I would believe a Midnight Dream,

nor

nor to trust Fancy any farther than it is attended with severe Reason. It is a very useful and enter-taining Power of human Nature in Matters of Illustration, Persuasion, Oratory, Poesy, Wit, Conversation, &c. but in the calm Enquiry after Truth and final Judgment of Things, Fancy should retire, and stand aside, unless it be call'd in to explain or illustrate a difficult Point by a Similitude.

Another Method of Deliverance from these Prejudices of Fancy, is to compare the Ideas that arise in our Imaginations with the real Nature of Things, as often as we have Occasion to judge concerning them; and let calm and sedate Reason govern and determine our Opinions, tho' Fancy should shew never so great a Reluctance. Fancy is the inferior Faculty, and it ought to obey.

IV. The various Passions or Affections of the Mind are numerous and endless Springs of Prejudice. They disguise every Object they converse with, and put their own Colours upon it, and thus lead the Judgment astray from Truth. It is Love that makes the Mother think her own Child the fairest, and will sometimes persuade us that a Blemish is a Beauty. Hope and Desire make an Hour of Delay seem as long as two or three Hours; Hope inclines us to think there is nothing too difficult to be attempted; Despair tells us that a brave Attempt is mere Rashness, and that every Difficulty is unsurmountable. Fear makes us imagine that a Bush shaken with the Wind has some favage Beast in it, and multiplies the Dangers that attend our Path: But still there is a more unhappy Effect of Fear when it keeps Millions of Souls in Slavery to the Errors of an established Religion: What could persuade the wise Men

Men and Philosophers of a Popish Country to be-lieve the gross Absurdities of the Roman Church, but the Fear of Torture or Death, the Galleys or the Inquisition? Sorrow and Melancholy tempt us to think our Circumstances much more dismal than they are, that we may have some Excuse for Mourning: and Envy reprefents the Condition of our Neighbour better than it is, that there might be some Pretence for her own Vexation and Uneafiness. Anger and Wrath and Revenge, and all those hateful Passions excite in us far worse Ideas of Men than they deserve, and persuade us to believe all that is ill of them. A Detail of the evil Influence of the Affections of the Mind upon our Judgment would make a large Volume.

The Cure of these Prejudices is attain'd by a constant Jealousy of our selves, and Watchfulness over our Passions, that they may never interpose when we are call'd to pass a Judgment of any thing: And when our Affections are warmly engag'd, let us abstain from judging. It would be also of great Use to us to form our deliberate Judgments of Persons and Things in the calmest and serenest Hours of Life, when the Passions of Nature are all filent, and the Mind enjoys its most perfect Composure: And these Judgments so formed should be treasur'd up in the Mind, that we might have Recourse to them in Hours of Need.

V. The Fondness we have for Self, and the Relation which other Persons and Things have to our Selves, furnish us with another long Rank of Prejudices. This indeed might be reduced to the Passion of Self-Love, but it is so copious an Head that I chose to name it as a distinct Spring of false Judgments. We are generally ready to fancy every thing of our own has something

thing peculiarly valuable in it, when indeed there is no other Reason, but because it is our own. Were we born amongst the Gardens of Italy, the Rocks of Switzerland, or the Ice and Snows of Russia and Sweden, still we should imagine peculiar Excellencies in our native Land. We conceive a good Idea of the Town and Village where we first breathed, and think the better of a Man for being born near us. We entertain the best Opinion of the Perfons of our own Party, and eafilv believe evil Reports of Persons of a different Sect or Faction. Our own Sex, our Kindred, our Houses, and our very Names seem to have something good and defirable in them. We are ready to mingle all these with our selves, and cannot bear to have others think meanly of them.

So good an Opinion have we of our own Sentiments and Practices, that it is very difficult to believe what a Reprover fays of our Conduct; and we are as ready to affent to all the Language of Flattery. We set up our own Opinions in Religion and Philosophy as the Tests of Orthodoxy and Truth; and we are prone to judge every Practice of other Men either a Duty or a Crime which we think would be a Crime or a Duty to us, tho' their Circumstances are vastly different from our own. This Humour prevails fometimes to fuch a Degree, that we would make our own Taste and Inclination the Standard by which to judge of every Dish of Meat that is set upon the Table, every Book in a Library, every Employment, Study and Business of Life, as well as every Recreation.

It is from this evil Principle of setting up self for a Model what other Men ought to be, that the Antichristian Spirit of Imposition and Persecution had its Original: the there is no more Reason

C.III.S. 3. The right Use of Reason. 205

for it than there was for the Practice of that Tyrant, who having a Bed fit for his own Size, was reported to stretch Men of low Stature upon the Rack, till they were drawn out to the Length of his Bed; and some add also that he cut off the Legs of any whom he found too long for it.

It is also from a Principle near akin to this that we pervert and strain the Writings of any venerable Authors, and especially the sacred Books of Scripture to make them speak our own Sense. Thro' the Influence which our own Schemes or Hypotheses have upon the Mind, we sometimes become so sharp-sighted as to find these Schemes in those Places of Scripture where the holy Writers never thought of them, nor the holy Spirit intended them. At other times this Prejudice brings such a Dimness upon the Sight, that we cannot read any thing that opposes our own Scheme, tho' it be written as with Sunbeams, and in the plainest Language; and perhaps we are in Danger in such a Case of winking a little against the Light.

We ought to bring our Minds free, unbias'd and teachable to learn our Religion from the Word of God; but we have generally form'd all the lesser as well as the greater Points of our Religion beforehand, and then we read the Prophets and Apostles only to persuade them to confirm our own Opinions. Were it not for this Instuence of Self, and a Bigotry to our own Tenets, we could hardly imagine that so many strange, absurd, inconsistent, wicked, mischievous, and bloody Principles should pretend to support and

defend themselves by the Gospel of Christ.

Every learned Critick has his own Hypothesis; and if the common Text be not favourable to his Opinion, a various Lection shall be made authentick.

tick. The Text must be suppos'd to be defective or redundant, and the Sense of it shall be literal or metaphorical, according as it best supports his own Scheme. Whole Chapters or Books shall be added or left out of the facred Canon, or be turn'd into Parables by this Influence. Luther knew not well how to reconcile the Epistle of St. James to the Doctrine of Justification by Faith alone, and so he could not allow it to be Divine. The Papists bring all the Apocrypha into their Bible, and stamp Divinity upon it, for they can fancy Purgatory is there and they find Prayers for the Dead. But they leave out the fecond Commandment because it forbids the Worship of Images. Others suppose the Mosaick History of the Creation and the Fall of Man to be oriental Ornaments, or a mere Allegory, because the literal Sense of those three Chapters of Genesis don't agree with their Theories. Even an honest plain-hearted and unlearned Christian is ready to find something in every Chapter of the Bible, to countenance his own private Sentiments; but he loves those Chapters best which speak his own Opinions plainest: This is a Prejudice that sticks very close to our Natures; the Scholar is infested with it daily, and the Mechanick is not free.

Self has yet a farther and pernicious Influence upon our Understandings, and is an unhappy Guide in the Search after Truth. When our own Inclination, or our Ease, our Honour or our Prosit tempts us to the Practice of any thing of suspected Lawfulness, how do we strain our Thoughts to find Arguments for it, and persuade our selves it is lawful: We colour over Iniquity and sinful Compliance with the Names of Virtue and Innocence, or at least of Constraint and Necessity. All the different and opposite Sentiments and Practi-

ces of Mankind are too much influenced by this mean Bribery, and give too just Occasion for satyrical Writers to say that Self-Interest governs all Mankind.

When the Judge had awarded due Damages to a Person into whose Field a Neighbour's Oxen had broke, it is reported that he reversed his own Sentence, when he heard that the Oxen which had done this Mischief were his own. Whether this be a History or a Parable, it is still a just Representation of the wretched Influence of Self to

corrupt the Judgment.

One Way to amend this Prejudice is to thrust Self so far out of the Question that it may have no manner of Influence whenfoever we are call'd to judge and confider the naked Nature, Truth and Justice of Things. In Matters of Equity between Man and Man, our Saviour has taught us an effectual Means of guarding against this Prejudice, and that is to put my Neighbour in the Place of my Self, and my Self in the Place of my Neighbour, rather than be bribed by this corrupt Principle of Self-Love to do Injury to our Neighbours. Thence arises that Golden Rule of dealing with others as we would have others deal with us.

In the Judgment of Truth and Falshood, Right and Wrong, Good and Evil, we ought to confider that every Man has a SELF as well as we; and that the Tastes, Passions, Inclinations and Interests of different Men are very different and often contrary, and that they dictate contrary Things: Unless therefore all manner of different and contrary Propositions could be true at once, Self can never be a just Test or Standard of Truth and

VI. The Tempers, Humours, and peculiar Turns of the Mind, whether they be natural or acquir'd, have a great Influence upon our Judgment, and become the Occasion of many Mistakes. Let us survey a few of them.

(1.) Some Persons are of an easy and credulous Temper, while others are perpetually discovering a

Spirit of Contradiction.

The credulous Man is ready to receive every thing for Truth, that has but a Shadow of Evidence; every new Book that he reads, and every ingenious Man with whom he converses, has Power emough to draw him into the Sentiments of the Speaker or Writer. The has so much Complainance in him, or Weakness of Soul, that he is ready to resign his own Opinion to the first Objection which he hears, and to receive any Sentiments of another that are afferted with a positive Air and much Assurance. Thus he is under a kind of Necessity, thro' the Indulgence of this credulous Humour, either to be often changing his Opinions, or to believe Inconsistencies.

The Man of Contradiction is of a contrary Humour, for he stands ready to oppose every thing that is said: he gives a slight Attention to the Reasons of other Men, from an inward scornful Presumption that they have no Strength in them. When he reads or hears a Discourse different from his own Sentiments, he does not give himself leave to consider whether that Discourse may be true; but employs all his Powers immediately to consute it. Your great Disputers and your Men of Controversy are in continual Danger of this sort of Prejudice: they contend often for Victory, and will maintain whatsoever they have afferted, while Truth is lost in the Noise and Tumult of reciprocal

procal Contradictions; and it frequently happens that a Debate about Opinions is turned into a mu-

tual Reproach of Persons.

The Prejudices of Credulity may in some Meafure be cur'd by learning to fet a high Value on Truth, and by taking more Pains to attain it; remembring that Truth oftentimes lies dark and deep, and requires us to dig for it as for hid Treafure; and that Falshood often puts on a fair Disguise, and therefore we should not yield up our Judgment to every plausible Appearance. It is no part of Civility or good Breeding to part with Truth, but to maintain it with Decency and Candor.

A Spirit of Contradiction is so pedantick and hateful that a Man should take much Pains with himself to watch against every Instance of it: He should learn so much good Humour at least as never to oppose any thing without just and folid Reason for it: He should abate some Degrees of Pride and Moroseness, which are never failing Ingredients in this fort of Temper, and should seek after so much Honesty and Conscience as never to contend for Conquest or Triumph; but to review his own Reasons and to read the Arguments of his Opponents (if possible) with an equal In-differency, and be glad to spy Truth and to submit to it, tho' it appear on the opposite Side.

(2.) There is another Pair of Prejudices deriv'd from two Tempers of Mind, near akin to those I have just mention'd; and these are the dogmatical and the sceptical Humour, i. e. always

positive, or always doubting.

By what means foever the Dogmatist came by his Opinions, whether by his Senses, or by his Fancy, his Education, or his own Reading, yet he believes them all with the same Assurance that

he does a mathematical Truth; he has scarce any mere Probabilities that belong to him; every thing with him is certain and infallible; every Punctilio in Religion is an Article of his Faith, and he answers all manner of Objections by a sovereign

Contempt.

Persons of this Temper are seldom to be convinced of any Mistake: A full Assurance of their own Notions makes all the Dissipulties of their own Side vanish so entirely, that they think every Point of their Belief is written as with Sunbeams, and wonder any one should find a Dissipulty in it. They are amazed that learned Men should make a Controversy of what is to them so perspicuous and indubitable. The lowest Rank of People both in learned and in vulgar Life is

very subject to this Obstinacy.

Scepticism is a contrary Prejudice. The Dogmatist is sure of every thing, and the Sceptick believes nothing. Perhaps he has found himself often mistaken in Matters of which he thought himself well assured in his younger Days, and therefore he is afraid to give Assent to any thing again. He sees so much Shew of Reason for every Opinion, and so many Objections also arising against every Doctrine, that he is ready to throw off the Belief of every thing: He renounces at once the Pursuit of Truth, and contents himself to say, There is nothing certain. It is well if thro' the Instuence of such a Temper he does not cast away his Religion as well as his Philosophy, and abandon himself to a profane Course of Life, regardless of Hell and Heaven.

Both these *Prejudices* last mention'd, tho' they are so opposite to each other, yet they arise from the same Spring, and that is, *Impatience of Study*, and Want of diligent Attention in the Search of

Truth.

Truth. The Dogmatist is in haste to believe something; he can't keep himself long enough in Suspence till some bright and convincing Evidence appear on one Side; but throws himself casually into the Sentiments of one Party or another, and then he will hear no Argument to the contrary. The Sceptick will not take Pains to search things to the Bottom, but when he sees Difficulties on both Sides resolves to believe neither of them. Humility of Soul, Patience in Study, Diligence in Enquiry, with an bonest Zeal for Truth, would go a great Way towards the Cure of both these Follies.

(3.) Another fort of Temper that is very injurious to a right Judgment of things is an inconstant, fickle, changeable Spirit, and a very uneven Temper of Mind. When such Persons are in one Humour, they pass a Judgment of Things agreeable to it; when their Humour changes, they reverse their first Judgment, and imbrace a new Opinion. They have no Steadiness of Soul; they want Firmness of Mind sufficient to establish themselves in any Truth, and are ready to change it for the next alluring Falshood that is agreeable to their Change of Humour. This Fickleness is sometimes so mingled with their very Constitution by Nature or by Distemper of Body, that a cloudy Day and a lowring Skie shall strongly incline them to form an Opinion, both of themselves and of Persons and Things round about them, quite different from what they believe when the Sun shines and the Heavens are serene.

This fort of People ought to judge of Things and Persons in their most sedate, peaceful and composed Hours of Life, and reserve these Judgments for their Conduct at more unhappy Seafore.

fons.

P 2

(4.)

(4.) Some Persons have a violent and turgid Manner both of Talking and Thinking; whatsoever they judge of, it is always with a Tincture of this Vanity. They are always in Extremes, and pronounce concerning every thing in the Superlative. If they think a Man to be learned, he is the chief Scholar of the Age; if another has low Parts, he is the greatest Blockhead in Nature: If they approve any Book on divine Subjects, it is the best Book in the World next to the Bible; if they speak of a Storm of Rain or Hail, it is the most terrible Storm that fell since the Creation, and a cold Winter Day is the coldest that ever was known.

But the Men of this swelling Language ought to remember that Nature has ten thousand moderate Things in it, and does not always deal in Ex-

tremes as they do.

(5.) I think it may be call'd another fort of Prejudices deriv'd from Humour, when some Men believe a Doctrine meerly because it is antient and has been long believ'd; others are so fond of Novelty, that nothing prevails upon their Assent so much as new Thoughts and new Notions. Again, there are some who set a high Esteem upon every thing that is foreign, and far-fetch'd; therefore China Pictures are admir'd, how aukward soever: Others value Things the more for being of our own native Growth, Invention, or Manufacture; and these as much despise foreign Things.

Some Men of Letters and Theology will not believe a Proposition even concerning a sublime Subject, till every thing mysterious, deep and difficult is cut off from it, tho' the Scripture asserts it never so plainly: Others are so fond of a Mystery and Things incomprehensible, that they would scarce believe the Doctrine of the Trinity is it could be explain'd; they incline to that soolish-

Rant

Rant of one of the Antients, Credo quia impossi-

bile est; I believe it because it is impossible.

To cure these Mistakes, remember that neither antique or novel, foreign or native, mysterious or plain, are certain Characters either of Truth or Falshood.

I might mention various other Humours of Menthat excite in them various Prejudices, and lead them into rash and mistaken Judgments; but these are sufficient for a Specimen.

VII. There are several other Weaknesses which belong to human Nature, whereby we are led into Mistakes, and indeed are render'd almost uncapable of passing a solid Judgment in Matters of great Depth and Difficulty. Some have a native Obscurity of Perception, (or shall I call it a want of natural Sagacity?) whereby they are hinder'd from attaining clear and distinct Ideas. Their Thoughts always feem to have fomething confus'd and cloudy in them, and therefore they judge in the dark. Some have a Defect in Memory, and then they are not capable of comparing their present Ideas with a great Variety of others, in order to secure themselves from Inconsistency in Judgment. Others may have a Memory large cnough, yet they are subject to the same Errors from a Narrowness of Soul, and such a Fixation and Confinement of Thought to a few Objects, that they scarce ever take a Survey of Things wide e-nough to judge wisely and well, and to secure themselves from all Inconsistencies.

Tho' these are natural Defects and Weaknesses, yet they may in some measure be reliev'd by Labour, Diligence and a due Attention to proper

Rules.

But among all the Causes of false Judgment which are within our selves, I ought by no means to leave out that universal and original Spring of Error, which we are inform'd of by the Word of God, and that is the Sin and Defection of our first Parents, whereby all our best natural Powers both of Mind and Body are impair'd, and ren-. der'd very much inferior to what they were in a State of Innocence. Our Understanding is darken'd, our Memory contracted, our corrupt Humours and Passions are grown predominant, our Reason infeebled, and various Disorders attend our Constitution and animal Nature, whereby the Mind is strangely impos'd upon in its Judgment of Things. Nor is there any perfect Relief to be expected on Earth. There is no hope of ever recovering from these Maladies, but by a fincere Return to God in the Ways of his own Appointment, whereby we shall be kept safe from all dangerous and pernicious Errors in the Matters of Religion; and tho' Imperfections and Mistakes will hang about us in the present Life as the Effects of our original Apostacy from God, yet we hope for a full Deliverance from them when we arrive at Heaven.

SECT. IV.

Prejudices arifing from other Persons.

WERE it not for the Springs of Prejudice, that are lurking in ourselves, we should not be subject to so many Mistakes from the Influence of others: But since our Nature is so susceptive of Errors on all Sides, it is fit we should have Hints and Notices given us, how far other Perfors may have Power over us, and become the Causes

C. III. S. 4. The right Use of Reason. 215

Causes of our false Judgments. This might all be cast into one Heap, for they are all near akin, and mingle with each other: But for Distinction sake let them be call'd the *Prejudices of Education*, of *Custom*, of *Authority*, and such as arise from the manner of *Proposal*.

I. Those with whom our Education is entrusted may lay the first Foundation of many Mistakes in our younger Years. How many Fooleries and Errors are instill'd into us by our Nurses, our Fellow-Children, by Servants or unskilful Teachers, which are not only maintain'd thro' the following Parts of Life, but sometimes have a very unhappy Influence upon us! We are taught that There are Goblins and Bugbears in the Dark; our young Minds are crouded with the terrible Ideas of Ghosts appearing upon every Occasion, or with the pleasanter Tales of Fairies dancing at Midnight. We learn to prophesy betimes, to foretel Futurities by good or evil Omens, and to presage approaching Death in a Family by Ravens and little Worms, which we therefore call a Death-Watch. We are taught to know beforehand, for a Twelvemonth together, which Days of the Week will be fair or foul, which will be lucky or unlucky; nor is there any Thing so silly, but may be impos'd upon our Understandings in that early part of Life; and these ridiculous Stories abide with us too long, and too far influence the weaker Part of Mankind.

We chuse our particular Sect and Party in the civil, the religious and the learned Life, by the Influence of Education. In the Colleges of Learning, some are for the Nominals, and some for the Realists in the Science of Metaphysicks, because their Tutors were devoted to these Parties. The

P 4

old Philosophy and the new have gained thousands of Partizans the same Way: And every Religion has its Infant Votaries, who are born, live and die in the same Faith without Examination of any Article. The Turks are taught early to believe in . Mahomet; the Jews in Moses; the Heathens worship a Multitude of Gods under the Force of their Education. And it would be well if there were not Millions of Christians, who have little more to fay for their Religion, than that they were born and bred up in it. The greatest Part of the Christian World can hardly give any Reason why they believe the Bible to be the Word of God, but because they have always believ'd it, and they were taught so from their Infancy: As Jews and Turks, and American Heathens believe the mostmonstrous and incredible Stories, because they have been train'd up amongst them, as Articles of Faith; so the Papists believe their Transubstantiation, and make no Difficulty of affenting to Impossibilities, fince it is the current Doctrine of their Catechisms. By the same Means the several Sects and Parties in Christianity believe all the strained Interpretations of Scripture by which they have been taught to support their own Tenets: They find nothing difficult in all the absurd Glosfes and far-fetcht Senses that are sometimes put upon the Words of the Sacred Writers, because their Ears have been always accustom'd to these Glosses; and therefore they sit so smooth and easy upon their Understandings, that they know not how to admit the most natural and easy Interpretation in Opposition to them.

In the same manner we are nurst up in many filly and gross Mistakes about domestick Affairs as well as in Matters of political Concernment. It is upon the same Ground that Children are train'd

up to be Whigs and Tories betimes; and every one learns the distinguishing Terms of his own Party, as the Papists learn to say their Prayers in Latin, without any Meaning, Reason, or Devotion.

This fort of Prejudice must be cur'd by calling all the Principles of our younger Years to the Bar of more mature Reason, that we may judge of the Things of Nature and political Affairs by juster Rules of Philosophy and Observation: And even the Matters of Religion must be first enquir'd into by Reason and Conscience, and when these have led us to believe Scripture to be the Word of God, then that becomes our Sovereign Guide, and Reason and Conscience must submit to receive its Dictates.

II. The next Prejudice which I shall mention is, that which arises from the Custom or Fashion of those among st whom we live. Suppose we have freed our selves from the younger Prejudices of our Education, yet we are in Danger of having our Mind turned afide from Truth by the Influence of general Custom.

Our Opinion of Meats and Drinks, of Garments and Forms of Salutation are influenc'd much more by Custom than by the Eye, the Ear, or the Taste. Custom prevails even over Sense itself, and therefore no Wonder if it prevail over Reason too. What is it but Custom that renders many of the Mixtures of Food and Sauces elegant in Britain, which would be aukward and nauseous to the Inhabitants of China, and indeed were naufeous to us when we first tasted them? What but Custom could make those Salutations polite in Muscovy, which are ridiculous in France or England? We call our felves indeed the politer Nations, but it is we who judge thus of our felves; and that fancied. cied Politeness is oftentimes more owing to Custom than Reason. Why are the Forms of our present Garments counted beautiful, and those Fashions of our Ancestors the Matter of Scoff and Contempt, which in their Day were all decent and genteel? It is Custom that forms our Opinion of Dress, and reconciles us by Degrees to those Habits which at first seem'd very odd and monstrous. It must be granted there are some Garments and Habits which have a natural Congruity or Incongruity, Modesty or Immodesty, Decency or Indecency, Gaudery or Gravity; tho' for the most part there is but little of Reason in these Affairs: But what little there is of Reason or natural Decency, Custom. triumphs over it all. It is almost impossible to persuade a gay Lady that any Thing can be decent which is out of Fashion: And it were well if Fashion stretch'd its Powers no farther than the

Business of Drapery and the Fair-Sex.

The Methods of our Education are govern'd by Custom. It is Custom and not Reason that sends every Boy to learn the Roman Poets, and begin a little Acquaintance with Greek, before he is bound an Apprentice to a Soapboiler or a Leatherfeller. It is Custom alone that teaches us Latin by the Rules of a Latin Grammar; a tedious and abfurd Method! And what is it but Custom that has for past Centuries confin'd the brightest Genius's even of high Rank in the Female World to the only Business of the Needle, and secluded them most unmercifully from the Pleasures of Knowledge, and the Divine Improvements of Reason? But we begin to break all these Chains, and Reafon begins to dictate the Education of Youth. May the growing Age be learned and wife!

It is by the Prejudice arising from our own Custom, that we judge of all other civil and religious Forms and Practices. The Rites and Ceremonies of War and Peace in other Nations, the Forms of Weddings and Funerals, the several Ranks of Magistracy, the Trades and Employments of both Sexes, the publick and the domestick Affairs of Life, and almost every thing of foreign Customs is judg'd irregular. It is all imagin'd to be unreasonable or unnatural, by those who have no other Rule to judge of Nature and Reason, but the Customs of their own Country, or the little Town where they dwell. Custom is call'd a second Nature, but

we often mistake it for Nature it self.

Befides all this, there is a Fashion in Opinions, there is a Fashion in Writing and Printing, in Style and Language. In our Day it is the Vogue of the Nation, that Parliaments may fettle the Succession of the Crown, and that a People can make a King; in the last Age this was a Doctrine akin to Treason. Citations from the Latin Poets were an Embellishment of Style in the last Century, and whole Pages in that Day were cover'd with them; it is now forbidden by Custom, and expos'd by the Name of Pedantry; whereas in Truth both these are Extremes. Sometimes our printed Books shall abound in Capitals, and sometimes reject them all. Now we deal much in E/fays, and most unreasonably despise systematic Learning, whereas our Fathers had a just Value for Regularity and Systems; then Folio's and Quarto's were the fashionable Sizes, as Volumes in Octavo are now. We are ever ready to run into Extremes, and yet Custom still persuades us that Reafon and Nature are on our Side.

This Business of the Fashion has a most powerful Influence on our Judgments; for it employs those two strong Engines of Fear and Shame to operate upon our Understandings with unhappy Success. We are asham'd to believe or profess an unfashionable Opinion in Philosophy, and a cowardly Soul dares not so much as indulge a Thought contrary to the establish'd or fashionable Faith, nor act in Opposition to Custom, tho' it be according to the Dictates of Reason.

I confess, there is a Respect due to Mankind which should incline even the wifest of Men to follow the innocent Customs of their Country in outward Practices of the civil Life, and in some Measure to submit to Fashion in all indifferent Affairs, where Reason and Scripture make no Remonstrances against it. But the Judgments of the Mind ought to be for ever free, and not biass'd by the Customs and Fashions of any Age or Nati-

on whatfocver.

To deliver our Understandings from this Danger and Slavery, we should consider these three Things.

1. That the greatest Part of the Civil Customs of any particular Nation or Age spring from Humour rather than Reason. Sometimes the Humour of the Prince prevails, and sometimes the Humour of the People. It is either the Great or the Many who dictate the Fashion, and these have not always the highest Reason on their Side.

2. Consider also, that the Customs of the same Nation in different Ages, the Customs of different Nations in the same Age, and the Customs of different Towns and Villages in the same Nation, are very various and contrary to each other. The fashionable Learning, Language, Sentiments and Rules of Politeness differ greatly in different Countries

and

and Ages of Mankind; but Truth and Reason are of a more uniform and steady Nature, and don't change with the Fashion. Upon this Account, to cure the Prepossessions which arise from Custom, it is of excellent Use to travel, and see the Customs of various Countries, and to read the Travels of other Men, and the History of past Ages, that every Thing may not seem strange and uncouth which is not practis'd within the Limits of our own Parish, or in the narrow Space of our own Life-time.

3. Consider yet again, how often we our selves have chang'd our own Opinions concerning the Decency, Propriety, or Congruity of several Modes or Practices in the World, especially if we have lived to the Age of thirty or forty. Custom or Fashion, even in all its Changes, has been ready to have some Degree of Ascendency over our Understanding, and what at one time seem'd decent, appears obsolete and disagreeable afterward, when the Fashion changes. Let us learn therefore to abstract as much as possible from Custom and Fashion, when we would pass a Judgment' concerning the real Value and intrinsic Nature of Things.

III. The Authority of Men is the Spring of an-

other Rank of Prejudices.

Among these the Authority of our Forefathers and antient Authors is most remarkable. We pay Deference to the Opinions of others, meerly because they lived a thousand Years before us; and even the Trifles and Impertinencies that have a Mark of Antiquity upon them are reverenced for this Reason, because they came from the Antients. It is granted, that the Antients had many wife and great Men among them, and some of their Writings, which Time hath deliver'd down to us, are truly valuable: But those Writers lived rather in the Infant-State of the World; and the Philosophers, as well as the polite Authors of our Age, are properly the Elders, who have seen the Mistakes of the younger Ages of Mankind, and corrected them by Observation and Experience.

Some borrow all their Religion from the Fathers of the Christian Church, or from their Synods or Councils; but he that will read Monsieur Daillé on the Use of the Fathers will find many Reasons why they are by no means fit to dictate our Faith, since we have the Gospel of Christ, and the Writings of the Apostles and Prophets in

our own Hands.

Some Persons believe every thing that their Kindred, their Parents, and their Tutors believe. The Veneration and the Love which they have for their Ancestors inclines them to swallow down all their Opinions at once, without examining what Truth or Falshood there is in them. Men take up their Principles by Inheritance, and defend them as they would their Estates, because they are born Heirs to them. I freely grant, that Parents are appointed by God and Nature to teach us all the Sentiments and Practices of our younger Years; and happy are those whose Parents lead them into the Paths of Wisdom and Truth! I grant farther, that when Persons come to Years of Discretion, and judge for themselves, they ought to examine the Opinions of their Parents with the greatest Modesty, and with a humble Deference to their superior Character; they ought in Matters perfectly dubious to give the Preference to their Parents Advice, and always to pay them the first Respect, nor ever depart from their Opinions and Practice, till Reason and Conscience make

C. III. S. 4. The right Use of Reason. 223

make it necessary. But after all, it is possible that *Parents* may be mistaken, and therefore *Reason* and *Scripture* ought to be our final Rules of Determination in Matters that relate to this World, and that which is to come.

Sometimes a favourite Author, or a Writer of great Name, drags a thousand Followers after him into his own Mistakes, meerly by the Authority of his Name and Character. The Sentiments of Aristotle were imbib'd and maintain'd by all the Schools in Europe for several Centuries; and a Citation from his Writings was thought a sufficient Proof of any Proposition. The great Descartes had also too many implicit Believers in the last Age, tho' he himself, in his Philosophy, disclaims all fuch Influence over the Minds of his Readers. Calvin and Luther, in the Days of Reformation from Popery, were learned and pious Men, and there have been a Succession of their Disciples even to this Day, who pay too much Reverence to the Words of their Masters. There are others who renounce their Authority, but give themselves up in too servile a manner to the Opinion and Authority of other Masters, and follow as bad or worse Guides in Religion.

If only learned, and wife, and good Men had Influence on the Sentiments of others, it would be at least a more excusable fort of Prejudice, and there would be some Colour and Shadow of Reason for it: But that Riches, Honours, and outward Splender should set up Persons for Dictators to all the rest of Mankind; this is a most shameful Invasion of the Right of our Understandings on the one hand, and as shameful a Slavery of the Soul on the other. The poor Man or the Labourer believes such a Principle in Politicks, or in Morality, and judges concerning the Rights of the King

King and the People, just as his wealthy Neighbour does. Half the Parish follows the Opinion of the Esquire, and the Tenants of a Manor fall into the Sentiments of their Lord, especially if he lives

amongst them.

As for Principles of Religion, we frequently find how they are taken up and forfaken, chang'd and resum'd by the Influence of Princes. In all Nations the Priests have much Power also in dictating the Religion of the People, but the Princes dictate to them: And where there is great Pomp and Grandeur attending the Priesthood in any Religion whatfoever, with fo much the more Reverence and stronger Faith do the People believe whatever they teach them: Yet it is too often evident that Riches, and Dominions, and high Titles in Church or State have no manner of Pretence to Truth and Certainty, Wisdom and Goodness, above the rest of Mortals, because these Superiorities in this World are not always confer'd according to Merit.

I confess, where a Man of Wisdom and Years, of Observation and Experience, gives us his Opinion and Advice in Matters of the civil or the moral Life, Reason tells us we should pay great Attention to him, it is probable he may be in the Right. Where a Man of long Exercise in Piety speaks of practical Religion, there is a due Deference to be paid to his Sentiments: And the same we may say concerning an ingenious Man long versed in any Art or Science, he may justly expect due Regard when he speaks of his own Affairs and proper Business. But in other things each of these may be ignorant enough, notwithstanding all their Piety, and Years, and particular Skill: Nor even in their own proper Province are they to be believ'd

in every thing without Reserve, and without Examination.

To free our felves from these *Prejudices*, it is sufficient to remember that there is no Rank nor Character among Mankind, which has any just Pretence to sway the Judgments of other Men by their Authority: For there have been Persons of the same Rank and Character who have maintain'd different and contrary Sentiments; but all these can never be true, and therefore the mere Name or Reputation that any of them possesses is not a sufficient Evidence of Truth.

Shall we believe the Antients in Philosophy? But some of the Antients were Stoicks, some Peripateticks, some Platonicks, and some Epicureans, some Cynics and some Sceptics. Shall we judge of Matters of the Ghristian Faith by the Fathers or Primitive Writers for three or sour hundred Years after Christ? But they often contradicted one another, and themselves too; and what is worse, they sometimes contradicted the Scripture itself. Now among all these different and contrary Sentiments in Philosophy and Religion, which of the Antients must we believe, for we cannot believe them all?

Again, To believe in all Things as our Predecessors did, is the ready way to keep Mankind in an everlasting State of Infancy, and to lay an eternal Bar against all the Improvements of our Reason and our Happiness. Had the present Age of Philosophers satisfied themselves with the substantial Forms, and occult Qualities of Aristotle, with the solid Spheres, Excentricks and Epicycles of Ptolomy, and the antient Astronomers; then, the great Lord Bacon, Copernicus, and Descartes, with the greater Sir Isaac Newton, Mr. Locke, and Mr. Boyle, had risen in our World in vain. We must

Q

have blunder'd on still in successive Generations amongst Absurdities and thick Darkness, and a hundred useful Inventions for the Happiness of human Life had never been known.

Thus it is in Matters of Philosophy and Science. But, you will fay, shall not our own Ancestors determine our Judgment in Matters of civil or religious Concernment? If they must, then the Child of a Heathen must believe that Heathenism is Truth; the Son of a Papist must assent to all the Absurdities of Popery; the Posterity of the Jews and Socinians must for ever be Socinians and Fews; and a Man, whose Father was of Republican Principles, must make a Succession of Republicans in his Family to the end of the World. If we ought always to believe what soever our Parents, or our Priests, or our Princes believe, the Inhabitants of China ought to worship their own Idols, and the Savages of Africa ought to believe all the Nonsense, and practise the Idolatry of their Negro Fathers and Kings. The British Nation, when it was Heathen, could never have become Christian; and when it was a Slave to Rome, it could never have been reform'd.

Besides, let us consider that the great God, our common Maker, has never given one Man's Understanding a legal and rightful Sovereignty to determine Truth for others, at least after they are past the State of Childhood or Minority. No single Person, how learned and wise, and great soever, or whatsoever natural, or civil, or ecclesiastical Relation he may have to us, can claim this Dominion over our Faith. St. Paul the Apostle in his private Capacity would not do it; nor hath an inspir'd Man any such Authority, until he make his divine Commission appear. Our Saviour himself tells the Jews, that if he had not done such wondrous

drous Works among them, they had not sinned in disbelieving his Doctrines, and refusing him for the Messiah. No Bishop or Presbyter, no Synod or Council, no Church or Assembly of Men, (fince the Days of Inspiration) hath Power derived to them from God to make Creeds or Articles of Faith for us, and impose them upon our Understandings. We must all act according to the best of our own Light, and the Judgment of our own Consciences, using the best Advantages which Providence hath given us, with an honest and impartial Diligence to enquire and search out the Truth: For every one of us must give an Account of himself to God. To believe as the Church, or the Court believes, is but a forry and a dangerous Faith: This Principle would make more Heathens than Christians, and more Papists than Pro-testants; and perhaps lead more Souls to Hell than to Heaven; for our Saviour himself has plainly told us, that if the Blind will be led by the Blind, they must both fall into the Ditch.

Tho' there be so much Danger of Error arising from the three Prejudices last mention'd, yet before I dismiss this Head, I think it proper to take Notice, that as Education, Custom and Authority are no fure Evidences of Truth, fo neither are they certain Marks of Falshood; for Reason and Scripture may join to dictate the same Things which our Parents, our Nurses, our Tutors, our Friends, and our Country believe and profess. Yet there appears sometimes in our Age a Pride and Petulancy in Youth, zealous to cast off the Sentiments of their Fathers and Teachers on Purpose to shew that they carry none of the Prejudices of Education and Authority about them. They indulge all manner of licentious Opinions and Practices, from a vain Pretence of afferting their Liberty. But alas!

alas! this is but changing one *Prejudice* for another; and fometimes it happens by this means, that they make a Sacrifice both of Truth and Virtue to the vile *Prejudices* of their *Pride* and *Senfuality*.

IV. There is another Tribe of Prejudices which are near akin to those of Authority, and that is when we receive a Doctrine because of the Manner in which it is propos'd to us by others. I have already mentioned the powerful Influence that Oratory and fine Words have to infinuate a false Opinion; and sometimes Truth is refus'd, and suffers Contempt in the Lips of a wise Man, for want of the Charms of Language: But there are several other Manners of Proposal whereby mistaken Sentiments are powerfully convey'd into the Mind.

Some Persons are easily persuaded to believe what another dictates with a positive Air and a great Degree of Assurance: They feel the overbearing Force of a confident Dictator, especially if he be of superior Rank or Character to themselves.

Some are quickly convinced of the Truth of any Doctrine, when he that proposes it puts on all the Airs of Piety, and makes folemn Appeals to Heaven, and Protestations of the Truth of it: The pious Mind of a weaker Christian is ready to receive any thing that is pronounced with such an awful Solemnity.

It is a *Prejudice* near akin to this, when a humble Soul is frighted into any particular Sentiments of Religion, because a Man of great Name or Character pronounces *Herefy* upon the contrary Sentiments, casts the Disbeliever out of the Church, and forbids him the Gates of Heaven.

Others

Others are allured into particular Opinions by gentler Prattices on the Understanding: Not only the foster Tempers of Mankind, but even hardy and rugged Souls are sometimes led away Captives to Error by the soft Airs of Address, and the sweet and engaging Methods of Persuasion and Kind-

ness.

I grant, where natural or reveal'd Religion plainly dictate to us the infinite and everlafting Importance of any facred Doctrine, it cannot be improper to use any of these Methods to persuade Men to receive the Truth, after we have given fufficient Reason and Argument to convince their Understandings. Yet all these Methods considered in themselves, have been often us'd to convey Falshood into the Soul as well as Truth; and if we build our Faith merely upon these Foundations, without Regard to the Evidence of Truth and the Strength of Argument, our Belief is but the Effect of Prejudice: For neither the positive, the awful or solemn, the terrible, or the gentle Methods of Address carry any certain Evidence with them that Truth lies on that Side.

There is another Manner of proposing our own Opinion, or rather opposing the Opinions of others, which demands a mention here, and that is when Persons make a Jest serve instead of an Argument; when they refute what they call Error by a Turn of Wit, and answer every Objection against their own Sentiments, by casting a Sneer upon the Objector. These Scoffers practise with Success up-on weak and cowardly Spirits: Such as have not been well establish'd in Religion or Morality, have been laught out of the best Principles by a confident Buffoon; they have yielded up their Opinions to a witty Banter, and fold their Faith and Religion for a Jest.

There

There is no Way to cure these Evils in such a degenerate World as we live in, but by learning to distinguish well between the Substance of any Dostrine, and the manner of Address either in proposing, attacking, or defending it; and then by setting a just and severe Guard of Reason and Conscience over all the Exercises of our Judgment, resolving to yield to nothing but the convincing Evidence of Truth, religiously obeying the Light of Reason in Matters of pure Reason, and the Dictates of Revelation in Things that relate to our Faith.

Thus we have taken a brief Survey of some of the infinite Varieties of Prejudice that attend Mankind on every side in the present State, and the Dangers of Error or of rash Judgment, we are perpetually expos'd to in this Life: This Chapter shall conclude with one Remark, and one Piece of

Advice.

The Remark is this. The same Opinion, where ther false or true, may be dictated by many Prejudices at the same time; for, as I hinted before, Prejudice may happen to dictate Truth sometimes as well as Error. But where two or more Prejudices oppose one another, as it often happens, the stronger prevails and gains the Assent: Yet how seldom does Reason interpose with sufficient Power to get the Ascendant of them all as it ought to do!

The Advice follows, (viz.) Since we find such a swarm of Prejudices attending us both within and without; since we feel the Weakness of our Reason, the Frailty of our Natures, and our Insufficiency to guard our selves from Error upon this Account, it is not at all unbecoming the Character of a Logician or a Philosopher (together with the Advices already given) to direct every Person in his Search after Truth to make his daily Ad-

dreffes

dreffes to Heaven, and implore the God of Truth to lead him into all Truth, and to ask Wisdom of bim who giveth liberally to them that ask it, and upbraideth us not with our own Follies.

Such a devout Practice will be an excellent Preparative for the best Improvement of all the Directions and Rules propos'd in the two following

Chapters.

CHAP. IV.

General Directions to assist us in judging aright.

THE chief Design of the Art of Logick is to assist us in forming a true Judgment of Things; a few proper Observations for this End have been dropt occasionally in some of the foregoing Chapters: Yet it is necessary to mention them again in this Place, that we may have a more compleat and fimultaneous View of the general Directions, which are necessary in order to judge aright. A Multitude of Advices may be framed for this Purpole; the chief of them may, for Order fake, be reduced to the following Heads.

I. Direct. When we consider our selves as Philosophers, or Searchers after Truth, we should examine all our old Opinions afresh, and enquire what was the Ground of them, and whether our Assent were built on just Evidence; and then we should cast off all those Judgments which were formed hereto-fore without due Examination. A Man in pursuit of Knowledge should throw off all those Preju-Q 4 dices dices which he had imbib'd in Times past, and guard against all the Springs of Error mention'd in the preceding Chapter, with utmost Watchfulness for Time to come.

Observe here, that this Rule of casting away all our former prejudicate Opinions and Sentiments, is not propos'd to any of us to be practifed at once, confider'd as Men of Business or Religion, as Friends or Neighbours, as Fathers or Sons, as Magistrates, Subjects or Christians; but meerly as Philosophers and Searchers after Truth: And tho' it may be well presum'd that many of our Judgments, both true and false, together with the Practices built thereon in the natural, the civil and the religious Life were form'd without sufficient Evidence; yet an universal Rejection of all these might destroy at once our present Sense and Practice of Duty with Regard to God, our Selves, and our Fellow-Creatures. Mankind would be hereby thrown into such a State of Doubting and Indifference, that it would be too long e're they recover'd any Principles of Virtue or Religion by a Train of Reasonings.

Besides, the common Affairs of human Life often demand a much speedier Determination, and we must many times act upon present Probabilities: The Bulk of Mankind have not Time and Leisure, and Advantages sufficient to begin all their Knowledge anew, and to build up every single Opinion and Practice afresh upon the just-

est Grounds of Evidence.

Yet let it be observ'd also, that so far as any Person is capable of forming and correcting his Notions and his Rules of Conduct in the natural, civil and religious Life by the strict Rules of Logick, and so far as he hath Time and Capacity to review his old Opinions, to re-examine all those which

which are any way doubtful, and to determine nothing without just Evidence, he is likely to become so much the wiser, and the happier Man, and (if Divine Grace assist him) so much the better Christian. And tho' this cannot be done all at once, yet it may be done by prudent Steps and Degrees, till our whole Set of Opinions and Principles be in time corrected and reform'd, or at least establisht upon juster Foundations.

II. Direct. Endeavour that all your Ideas of those Objects concerning which you pass any Judgment, be clear and distinct, compleat, comprehensive, extensive and orderly, as far as you have Occasion to judge concerning them. This is the Substance of the last Chapter of the first Part of Logick. The Rules which direct our Conceptions, must be review'd, if we would form our Judgments aright. But if we will make haste to judge at all Adventures, while our Ideas are dark and confus'd, and very imperfect, we shall be in Danger of running into many Mistakes. This is like a Person who would pretend to give the Sum total of a large Account in Arithmetick, without surveying all the Particulars; or as a Painter who professes to draw a fair and distinct Landskip in the Twilight, when he can hardly diftinguish a House from a Tree.

Observe here, that this Direction does not require us to gain clear, distinct, compleat Ideas of Things in all their Parts, Powers and Qualities in an absolute Sense, for this belongs to God alone, and is impossible for us to attain: But it is exprest in a relative or limited Sense; that is, our Ideas should be clear, distinct and comprehensive, &c. at least so far as we have Occasion at that time to judge concerning them. We may form many true and certain Judgments concerning God, Angels, Amimals, nimals, Men, Heaven, Hell, &c. by those partial and very impersect Conceptions of them to which we have attain'd, if we judge no farther concern-

ing them than our Conceptions reach.

We may have a clear and distinct Idea of the Existence of many Things in Nature, and affirm that they do exist, tho' our Ideas of their intimate Essences and Causes, their Relations and Manners of Action are very confus'd and obscure. We may judge well concerning several Properties of any Being, tho' other Properties are unknown, for perhaps we know not all the Properties of any Being whatsoever.

Sometimes we have clear Ideas of the absolute Properties of an Object; and we may judge of them with Certainty, while the relative Properties are very obscure and unknown to us. So we may have a clear and just Idea of the Area of a Parallellogram without knowing what Relation it bears to the Area of a Triangle or a Polygon. I may know the length of the Diameter of a Circle, without knowing what Proportion it has to the Circumference.

There are other Things whose external relative Properties with respect to each other, or whose Relations to us we know better than their own inward and absolute Properties, or their essential distinguishing Attributes. We perceive clearly, that Fire will warm or burn us, and will evaporate Water; and that Water will allay our Thirst, or quench the Fire, tho' we know not the inward distinguishing Particles or prime essential Properties of Fire or Water. We may know the King, and Lord Chancellor, and affirm many Things of them in their legal Characters, tho' we can have but a confus'd Idea of their Persons or natural Features, if we have never seen their Faces. So the Scri-

pture has reveal'd God himself to us, as our Creator, Preserver, Redeemer, and Sanctifier, and as the Object of our Worship, in clearer Ideas than it has reveal'd many other abstruse Questions which may be rais'd about his own Divine Essence or Substance, his Immensity or Omnipresence.

This therefore is the general Observation in order to guide our Judgments, that we should not allow our selves to form a Judgment concerning Things farther than our clear and distinct Ideas reach, and

then we are not in danger of Error.

But there is one confiderable Objection against this Rule which is necessary to be answer'd; and there is one just and reasonable Exception, which is as needful to be mention'd.

The Objection is this: May we not judge safely concerning some total or compleat Ideas, when we have a clear Perception only of some Parts or Properties of them? May we not affirm, that All that is in God is Eternal, or that all his unknown Attributes are infinite, tho' we have so very imperfect an Idea of God, Eternity and Infinity? Again, May we not safely juage of particular Objects whose Idea is obscure by a clear Idea of the General? May I not affirm, that Every unknown Species of Animals has inward Springs of Motion, because I have a clear Idea that these inward Springs belong to an Animal in general?

Answer. All those suppos'd unknown Parts, Properties or Species are clearly and distinctly perceived to be connected with, or contain'd in the known Parts, Properties or general Ideas, which we suppose to be clear and distinct as far as we judge of them: And as we have no particular Idea of those unknown divine Attributes, or unknown Species of Animals; so there is nothing particular affirm'd concerning them beyond what belongs to the

the general Idea of Divine Attributes or Animals, with which I clearly and distinctly perceive them to be connected.

It may be illustrated in this manner. Suppose a long Chain lies before me, whose nearest Links I see are Iron Rings, and I see them fasten'd to a Post near me, but the most distant Links lie beyond the reach of my Sight, so that I know not whether they are Oval or Round, Brass or Iron: Now I may boldly affirm the whole length of this Chain is fasten'd to the Post, for I have a clear Idea that the nearest Links are thus fastened, and a clear Idea that the distant Links are connected with the nearest, if I can draw the whole Chain by one Link.

Or thus; If two known Ideas, A and B are evidently join'd, or agree, and if C unknown be included in A, and also D unknown be included in B, then I may affirm that C and D are join'd and agree; for I have a clear Perception of the Union of the two known Ideas A and B; and also a clear Perception of the Connexion of the unknown Ideas with the known. So that clear and distinct Ideas must still abide as a general necessary Qualification in order to form right Judgments: and indeed, it is upon this Foot that all Ratiocination is built, and the Conclusions are thus formed, which deduce Things unknown from Things known.

Yet it seems to me that there is one just Limitation or Exception to this general Rule of Judgment, as built on clear and distinct Ideas, and it is this;

Exception. In Matters of meer Testimony, whether human or divine, there is not always a Necessity of clear and distinct Ideas of the Things which are believ'd. Tho' the Evidence of Propositions, which are entirely form'd by our sclves, depends on the Clearness and Distinctness

Distinctness of those Ideas of which they are compos'd, and on our own clear Perception of their Agreement or Disagreement, yet we may justly assent to Propositions form'd by others, when we have neither a clear Conception in our selves of the two Ideas contained in the Words, nor how they agree or disagree; provided always that we have a clear and sufficient Evidence of the Credibility of the Persons who inform us.

Thus when we read in Scripture the great Doctrines of the Deity of Christ, of the Union of his divine and human Natures, of the divine Agency of the blessed Spirit, that the Son is the Brightness of his Father's Glory, that all Things were created by him, and for him, that the Son shall give up his Kingdom to the Father, and that God shall be all in all, we may safely believe them: For tho' our I-deas of these Objects themselves are not sufficiently clear, distinct and perfect, for our own Minds to form these Judgments or Propositions concerning them, yet we have a clear and distinct Perception of God's revealing them, or that they are contain'd in Scripture; and this is sufficient Evidence to determine our Assent.

The same Thing holds true in some Measure, where credible human Testimony assures us of some Propositions, while we have no sufficient Ideas of the Subject and Predicate of them to determine our Assent. So when an honest and learned Mathematician assures a Plowman that the three Angles of a Triangle are equal to two right Angles, or that the Square of the Hypotenuse of a right-angled Triangle is equal to the Sum of the Squares of the two Sides; the Plowman, who has but confus'd Ideas of these Things, may sirmly and safely believe these Propositions upon the same Ground, because

because he has Evidence of the Skill and Faithfulness of his Informer *.

III. Direction. When you have obtain'd as clear and comprehensive Ideas as is needful, both of the Subject and Predicate of a Proposition, then compare those Ideas of the Subject and Predicate

* Perhaps some may object against this Representation of things, and fay, that "We cannot properly be faid to believe a Proposition any farther " than we ourselves have Ideas under the Terms: Therefore if we have no " Ideas under the Terms, we believe nothing but the Connection of Words or Sounds; and if we have but observe and inadequate Ideas under the Terms, then we partly believe a Connestion of Things, and partly a Connection of Sounds: but that we cannot properly be said to believe the

** Proposition, for our Faith can never go beyond our Ideas.

Now to set this Matter in a clear Light, I suppose, that every Proposition which is proposed to my Assent, is a Sentence made up of Terms which have some Ideas under them, known or unknown to me. I confess, if I believe there are no Ideas at all under the Terms, and there is nothing meant by them, then indeed (with regard to me) it is the meer joining of Sounds: But if (for Instance) a Plowman has credible Information from an honest and skilful Mathematician, that an Ellipsis is made by the Section of a Cone, he believes the Proposition, or he believes that Sentence is true, as is is made up of Terms which his Informant understands, tho' the Ideas be unknown to him; that is, he believes there are fome Ideas which his Informant has under these Words which are really connected. And, I think this may justly be called, believing the Proposition, for it is a Belief of something more than the meer joining of Sounds; it is a Belief of the real Connection of some unknown Ideas belonging to those Sounds; and in this Sense a Man may be faid to believe the Truth of a Proposition, which he doth not understand at all.

With more Reason still may we be said to believe a Proposition upon credible Testimony, if we have force fort of Ideas under the Terms, tho' they are but partial or inadequate, and obscure; such as, Divine Answers were given by Urim and Thummim: For fince it is purely upon Testimony we believe the known Parts of the Ideas signified by those Words to be connected, upon the fame Testimony we may also believe all the unknown Parts of the Ideas signified by those Words to be connected, (viz.) because our Informant is knowing and faithful. And in this Sense we may justly be said to believe a Propolition of Scripture entirely, which we understand but very imperfectly,

because God who reveals it is knowing and faithful in Perfection.

And indeed, unless this Representation of the Matter be allowed, there are but very few Propositions in the World, even in human Things, to which we can give an entire-Affent, or which we may be faid either to know, or to believe, hecause there is scarce any thing on Earth of which we have an adequate and most perfect Idea. And it is evident that in Divine Things there is scarce any thing which we could either know or believe without this Allowance: For tho' Reason and Revelation join to inform me, that God is holy, how exceeding inadequate are my Ideas of God, and of his Holiness? yet I may boldly and entirely affent to this whole Proposition, since I am fure that every known and unknown Idea fignified by the Term Ged,

cate together with utmost Attention, and observe how far they agree, and wherein they differ: Whether the Proposition may be affirmed Absolutely or Relatively, whether in Whole or in Part, whether Universally or Particularly, and then under what particular Limitations. Turn these Ideas about in your Mind, and take a View of them on all Sides, just as a Mason would do to see whether two hewn Stones exactly suit each other in every Part, and

is connected with the Ideas of the Term Holiness, because Reason partly informs me, but especially because the Divine Testimony which has connected

them, is certainly credible.

I might argue upon this Head perhaps more forcibly from the Doctrine of God's Incomprehenfibleness. It we could believe nothing but what we have Ideas of, it would be impossible for us to believe that God is Incomprehensible: For this implies in it a Belief, that there are some unknown Ideas belonging to the Nature of God. Therefore we do both believe and profess something concerning unknown Ideas, when we believe and profess that God

is incomprehensible.

I persuade my self that most of those very Persons who object against my Representation of Things, will yet readily confess, they believe all the Propositions in Scripture, rather than declare, They do not believe several of them; tho' they must acknowledge that several of them are far above their Understanding, or that they have scarce any Ideas of the true Sense of them. And therefore where Propositions deriv'd from credible Testimony are made up of dark or inadequate Ideas, I think it is much more proper to say, We bestieve them, than that We do not believe them, lest we cut off a Multitude of the Propositions of the Bible from our Assent or Faith.

Yet let it be observed here, that when we believe a Proposition on meer Testimony, of which we have no Ideas at all, we can only be said to give a general implicit Assent to the Truth of that Proposition, without any particular Knowledge of, or explicit Assent to the special Truth contained in that Proposition: And this our implicit Assent is of very little Use, unless it be to testify

our Belief of the Knowledge and Veracity of him that informs us.

As our Ideas of a Proposition are more or less clear and adequate, as well as just and proper, so we do explicitly assent more or less to the particular Trath contained in that Proposition, and our Assent hereby becomes more or less useful for the Encrease of our Knowledge or the Direction of our Practice.

When Divine Testimony plainly proposes to our Faith such a Proposition whereof we have but obscure, doubtful and inadequate Ideas, we are bound implicitly to believe the Truth of it, as express in those Terms, in order to shew our Submission to God who revealed it, as a God of perfect Knowledge and Veracity: But it is our Duty to use all proper Methods to obtain a farther and explicit Knowledge of the particular Truth contain'd in the Proposition, if we would improve by it either in Knowledge or Virtue. All necessary Rules of Grammar and Criticism should be employed to find out the very Ideas that belong to those Words, and which were design'd by the Divine Speaker or Writer. Tho' we may believe the Truth of a Proposition which we do not understand, yet we should endeavour to understand every Proposition which we believe to be true.

are fit to be join'd in erecting a carved or fluted Pillar.

Compare the whole Subject with the whole Predicate in their several Parts: Take heed in this Matter that you neither add to, or diminish the Ideas contain'd in the Subject or in the Predicate; for such an Inadvertence or Mistake will expose you to great Error in Judgment.

IV. Direct. Search for Evidence of Truth with Diligence and Honesty, and be heartily ready to receive Evidence, whether for the Agreement or Dis-

agreement of Ideas.

Search with Diligence; spare no Labour in searching for the Truth in due Proportion to the Importance of the Proposition. Read the best Authors who have writ on that Subject; consult your wise and learned Friends in Conversation; and be not unwilling to borrow Hints toward your Improvement, from the meanest Person, nor to receive any Glimpse of Light from the most Unlearned. Diligence and Humility is the Way to thrive in the Riches of the Understanding, as well as in Gold or Silver. Search carefully for the Evidence of Truth, and dig for Wisdom as for bid Treasure.

Search with a steady Honesty of Soul, and a sincere Impartiality to find the Truth. Watch against every Temptation that might bribe your Judgment, or warp it aside from Truth. Do not indulge your self to wish any unexamined Proposition were true or false. A Wish often perverts the Judgment, and tempts the Mind strangely to believe upon slight Evidence whatsoever we wish to be true, or to renounce whatsoever we wish to

be false.

V. Direct. Since the Evidence of the Agreement or Disagreement of two Ideas is the Ground of our Assent to any Proposition, or the great Criterion of Truth; therefore we should suspend our Judgment, and neither assirm or deny till this Evidence appear.

This Direction is different from the second; for tho' the Evidence of the Agreement or Disagreement of two Ideas most times depends on the Clearness and Dislinetness of the Ideas themselves, yet it does not always arise thence. Testimony may be a sufficient Evidence of the Agreement or Disagreement of two obscure Ideas, as we have seen just before in the Exception under the second Direction. Therefore, tho' we are not univerfally, and in all Cases bound to suspend our Judgment till our Ideas of the Objects themselves are clear and distinct, yet we must always suspend our Judgment, and with-hold our Assent to, or Denial of any Proposition, till some just Evidence appear of its Truth or Falshood. It is an Impatience of Doubt and Sufpence, a Rashness and Precipitance of Judgment, and Hastiness to believe something on one Side or the other, that plunges us into many Errors.

This Direction to delay and suspend our Assent, is more particularly necessary to be observed when such Propositions offer themselves to us as are supported by Education, Authority, Custom, Inclination, Interest, or other powerful Prejudices; for our Judgment is led away insensibly to believe all that they dictate; and where Prejudices and Dangers of Error are multiplied, we should set the

stricter Guard upon our Assent.

Yet remember the Caution or Limitation here which I gave under the first Direction (viz.) that this is not to be too strictly applied to Matters of daily Practice, either in human Life or Religion;

K

but when we confider our selves as *Philosophers* or *Searchers after Truth*, we should always with-hold our Assent where there is not just Evidence: And as far and as fast as we can in a due Consistence with our daily necessary Duties, we should also reform and adjust all our Principles and Practices both in Religion and the civil Life by these Rules.

VI. Direct. We must judge of every Proposition by those proper and peculiar Mediums or Means whereby the Evidence of it is to be obtain'd, whether it be Sense, Consciousness, Intelligence, Reason, or Testimony. All our Faculties and Powers are to be employ'd in judging of their proper Objects.

If we judge of Sounds, Colours, Odours, Sapors, the Smoothness, Roughness, Softness or Hardness of Bodies, it must be done by the use of our Senses: But then we must take Heed that our Senses are

well dispos'd, as shall be shewn afterward.

And fince our Senses in their various Exercises are in some Cases liable to be deceiv'd, and more especially when by our Eyes or Ears we judge of the Figure, Quantity, Distance, and Position of Objects that are afar off, we ought to call our Reason into the Assistance of our Senses, and correct the Errors of one Sense by the help of another.

It is by the Powers of Sense and Reason join'd together that we must judge philosophically of the inward Nature, the secret Properties and Powers, the Causes and Effects, the Relations and Proportions of a thousand corporeal Objects which surround us on Earth, or are placed at a Distance in the Heavens. If a Man on the one Hand confines himself only to sensible Experiments, and does not exercise Reason upon them, he may surprize himself

himself and others with strange Appearances, and learn to entertain the World with Sights and Shews, but will never become a Philosopher: And on the other Hand, if a Man imprison himself in his Closet, and employ the most exquisite Powers of Reason to find out the Nature of Things in the corporeal World, without the Use of his Senses, and the Practice of Experiments, he will frame to himself a Scheme of Chimeras instead of true Philosophy. Hence came the Invention of substantial Forms and Qualities, of Materia Prima and Privation, with all the insignificant Names us'd by the Peripatetick Writers; and it was for want of more Experiments that the Great Descartes fail'd in several Parts of his philosophical Writings.

In the abstracted and speculative Parts of the Mathematics, which treat of Quantity and Number, the Faculty of Reason must be chiefly employ'd to perceive the Relation of various Quantities, and draw certain and useful Conclusions; but it wants the Assistance of Sense also to be acquainted with Lines, Angles and Figures. And in practical Mathematics our Senses have still greater Employ-

ment.

If we would judge of the pure Properties and Actions of the Mind, of the Nature of Spirits, their various Perceptions and Powers, we must not enquire of our Eyes and our Ears, nor the Images or Shapes laid up in the Brain, but we must have recourse to our own Consciousness of what passes within our own Mind.

If we are to pass a Judgment upon any thing that relates to Spirits in a State of Union with Animal Nature, and the mixt Properties of Sensation, Fancy, Appetite, Passion, Pleasure and Pain, which arise thence, we must consult our own Sensations and the other

Powers which we find in our felves confider'd as Men or Creatures made up of a Mind and an Animal; and by just Reasonings deduce proper Consequences, and improve our Knowledge in these Subjects.

If we have Occasion to judge concerning Matters done in past Ages, or in distant Countries, and where we our selves cannot be present, the Powers of Sense and Reason (for the most part) are not sufficient to inform us, and we must therefore have recourse to the Testimony of others; and this is either divine or human.

In Matters of meer human Prudence, we shall find the greatest Advantage by making wise Obfervations on our own Conduct, and the Conduct of others, and a Survey of the Events attending such Conduct. Experience in this Case is equal to a natural Sagacity, or rather superior. A Treasure of Observations and Experiences collected by wise Men, is of admirable Service here. And perhaps there is nothing in the World of this kind equal to the sacred Book of Proverbs, even if we look on it as a meer human Writing.

In Questions of Natural Religion we must exercise the Faculty of Reason which God has given us; and since he has been pleas'd to afford us his Word, we should confirm and improve or correct our Reasonings on this Subject by the Divine As-

fistance of the Bible.

In Matters of reveal'd Religion, that is, Chrifianity, Judaism, &c. which we could never have known by the Light of Nature, the Word of God is our only Foundation and chief Light; tho' here our Reason must be us'd both to find out the true Meaning of God in his Word, and to derive just Inferences from what God has written, as well as to judge of the Credentials whereby Divine Testimony is distinguish'd from meer human Testimony, or from Imposture.

As

As Divine Revelation can never contradict right Reason, (for they are two great Lights given us by our Creator for our Conduct) so Reason ought by no Means to assume to itself a Power to contradict Divine Revelation.

Tho' Revelation be not contrary to Reason, yet there are four Cases wherein Matters of Revelation may be said to rise above, or go beyond our Reason.

- I. When Revelation afferts two Things of which we have clear Ideas to be joined, whose Connection or Agreement is not discoverable by Reason; as when Scripture informs us that The Dead shall rise, that The Earth shall be burnt up, and the Man Christ Jesus shall return from Heaven, none of these Things could ever be found out or prov'd by Reason.
- 2. When Revelation affirms any Proposition, while Reason has no clear and distinct Ideas of the Subject, or of the Predicate; as God created all Things by Jesus Christ: By the Urim and Thummim God gave forth Divine Oracles. The Predicate of each of these Propositions is to us an obscure Idea.
- 3. When Revelation, in plain and express Language, declares some Dostrine which our Reason at present knows not certainly how to reconcile to some of its own Principles; as, that the Child Jesus is the mighty God, Esa. ix. 6. which carries a seeming Opposition to the Unity and Spirituality of the Godhead, which are Principles of Reason.

4. When two Propositions or Doctrines are afferted by divine Revelation, which our Reason at present knows not well how to reconcile with one another; as, The Father is the only true God, John xvii. 3. and yet Christ is over all, God blessed for ever, Rom. ix. 5.

 R_3

Now divine Revelation having declared these Propositions, Reason is bound to receive them, because it cannot prove them to be utterly inconsistent or impossible, tho' the Ideas of them may be obscure, tho' we ourselves see not the rational Connection of them, and tho' we know not certainly how to reconcile them. In these Cases Reason must submit to Faith; that is, we are bound to believe what God asserts, and wait till he shall clear up that which seems dark and difficult, and till the Mysteries of Faith shall be farther explained to us either in this World or in the World to come *, and Reason it self dictates this Submission.

VIIth Direction. It is very useful to have some general Principles of Truth settled in the Mind, whose Evidence is great and obvious, that they may be always ready at Hand to assist us in judging of the great Variety of Things which occur. These may be called first Notions, or fundamental Principles; for the many of them are deduced from each other, yet most or all of them may be call'd Principles when compared with a thousand other Judgments which we form under the Regulation and Influence of these primary Propositions.

Every Art and Science, as well as the Affairs of civil Life and Religion, have peculiar Principles of this kind belonging to them. There are Metaphysical, Physical, Mathematical, Political, Oeconomical, Medicinal, Theological, Moral and Prudential Principles of Judgment. It would be too tedious to give a Specimen of them all in this Place. Those which are of the most universal Use to us both as Men and as Christians, may be

2

^{*} See something more on this Subject, Dired. II. preced. and Chap. V. Sed. 6.

found in the following Chapter among the Rules of Judgment about particular Objects.

VIIIth Direction. Let the Degrees of your Affent to every Proposition bear an exact Proportion to the different Degrees of Evidence. Remember this is one of the greatest Principles of Wisdom that Man can arrive at in this World, and the best human Security against dangerous Mistakes in Speculation or Practice.

In the Nature of Things of which our Knowledge is made up there is infinite Variety in their Degrees of Evidence. And as God hath given our Minds a Power to suspend their Assent till the Evidence be plain, so we have a Power to receive Things which are proposed to us with a stronger or weaker Belief in infinite Variety of Degrees proportionable to their Evidence. I believe that the Planets are inhabited, and I believe that the Earth rolls amongst them yearly round the Sun; but I don't believe both these Propositions with an equal Firmnels of Assent, because the Arguments for the latter are drawn from mathematical Observations; but the Arguments for the former are but probable Conjectures and moral Reafonings. Yet neither do I believe either of these Propositions so firmly, as I do that the Earth is about twenty four thousand Miles round, because the mathematical Proof of this is much easier, plainer and stronger. And yet farther, when I fay that the Earth was created by the Power of God, I have still a more infallible Assurance of this than of all the rest, because Reason and Scripture join to assure me of it.

IXth Direction. Keep your Mind always open to receive Truth, and never set Limits to your own Im-R 4 provements be objected even against your favourite Opinions, and those which have had longest Possession of your Assent. And if there should be any new and uncontroulable Evidence brought against these old or beloved Sentiments, don't wink your Eyes fast against the Light, but part with any Thing for the Sake of Truth: Remember when you overcome an Error you gain Truth; the Victory is on your Side, and the Advantage is all your own.

I confess those grand Principles of Belief and Practice which universally influence our Conduct both with Regard to this Life and the Life to come, should be suppos'd to be well settled in the first Years of our Studies, such as, the Existence and Providence of God, the Truth of Christianity, the Authority of Scripture, the great Rules of Morality, &c. We should avoid a light fluttering Genius, ever ready to change our Foundations, and to be carried about with every Wind of Doctrine. To guard against which Inconvenience, we should labour with earnest Diligence and fervent Prayer, that our most fundamental and important Points of Belief and Practice may be e-Itablish'd upon just Grounds of Reason and Scripture when we come to Years of Discretion, and fit to judge for ourselves in such important Points. Yet fince it is possible that the Folly or Prejudices of younger Years may have establish'd Persons in Iome mistaken Sentiments, even in very important Matters, we should always hold ourselves ready to receive any new Advantage toward the Correction or Improvement even of our established Principles, as well as Opinions of leffer Moment.

CHAP. V.

Special Rules to direct us in judging of par-ticular Objects.

IT would be endless to run thro' all those particular Objects concerning which we have Occasion to pass a Judgment at one Time or another. Things of the most frequent Occurrence, of the widest Extent, and of the greatest Importance, are the Objects and Exercises of Sense, of Reason and Speculation, the Matters of Morality, Religion and Prudence, of human and divine Testimony, together with the Essays of Reasoning upon Things past and suture. Special Rules relating to all these will be the Subject of the following Sections.

SECT. I.

Principles and Rules of Judgment concerning the Objects of Sense.

THO' our Senses are sometimes liable to be deceived, yet when they are rightly disposed, and fitly exercised about their proper Objects, with the just Assistance of Reason, they give us sufficient Evidence of Truth.

This may be prov'd by an Argument drawn from the Wisdom, Goodness, and Faithfulness of God our Creator. It was he gave us our Senses, and he would not make us of fuch a Constitution as to be liable to perpetual Deception and una-voidable Error in using these Faculties of Sense in the best manner we are capable of, about these

very Things which are the proper Objects of them.

This may be proved also by the ill Consequences that would follow from the Supposition of the contrary. If we could have no Certainty of the Dictates of our Senses, we could never be sure of any of the common Affairs and Occurrences of Life. Men could not transact any of their civil or moral Concerns with any Certainty or Justice; nor indeed could we eat or drink, walk or move with Safety. Our Senses direct us in all these.

Again, the Matters of Religion depend in some Measure upon the Certainty of the Dictates of Sense; for Faith comes by Hearing; and it is to our Senses that God appeals in working Miracles to prove his own Revelation. Now if when our Eyes and Ears, and other Organs of Sense are rightly dispos'd and exercis'd about their proper Objects, they were always liable to be deceived, there could be no Knowledge of the Gospel, no Proof of divine Revelation by Visions, Voices, or Miracles.

Our Senses will discover Things near us and round about us, which are necessary for our prefent State with sufficient Exactness, and Things distant also, so far as they relate to our necessary Use of them.

Nor is there need of any more accurate Rules for the Use of our Senses in the Judgment of all the common Affairs of Life, or even of miraculous and divine Operations, than the vulgar Part of Mankind are sufficiently acquainted with by Nature, and by their own daily Observations.

But if we would express these Rules in a more exact manner, how to judge by the Distates of our

Senses, they should be represented thus;

Sense be rightly dispos'd, and not under the Power of any Distemper or considerable Decay; as for Instance, that our Eyes are not tinctured with the Jaundice, when we would judge of Colours, lest we pronounce them all yellow: That our Hands are not burning in a Fever, nor benumm'd with Frost or the Palsy, when we would judge of the Heat or Coldness of any Object: That our Palate be not vitiated by any Disease, or by some other improper Taste, when we would judge of the true Taste of any Solid or Liquid. This Direction relates to all our Senses, but the following Rules chiefly refer to our Sight.

2. We must observe whether the Object be at a proper Distance, for if it be too near or too far off, our Eyes will not sufficiently distinguish many Things which are properly the Objects of Sight; and therefore (if possible) we must make nearer Approaches to the Object, or remove farther from it, till we have obtained that due Distance which gives us the clearest Perception.

3. We must not employ our Sight to take a full Survey at once of Objects that are too large for it, but we must view them by Parts, and then judge of the whole: Nor must our Senses judge of Objects too small, for some Things which appear thro' Glasses to be really and distinctly existent, are either utterly invisible, or greatly confus'd when we would judge of them by the naked Eye.

4. We must place ourselves in such a Position toward the Object, or place the Object in such a Position toward our Eye, as may give us the clearest Representation of it; for a different Position greatly alters the Appearance of the Shape of Bodies. And for this Reason we should change the

Position

Position both of the Eye and the Object in some Cases, that by viewing the Object in several Appearances we may pass a more compleat and cer-

tain Judgment concerning it.

which Objects are represented to our Senses; whether it be thinner or thicker; whether it be Air, or Vapour, or Water, or Glass, &c. whether it be duly enlightned or dusky; whether it reflect, or refract, or only transmit the Appearance of the Object; and whether it be tinctur'd with any particular Colour; whether it be moving or at Rest.

6. We must sometimes use other Helps to assist our Senses; and if we make use of Glasses, we must make all just Allowances for the Thickness or Thinness of them, for the Clearness or Dulness, for the Smoothness or Roughness, for the Plainness, the Convexity or Concavity of them, and for the Distance at which these Glasses are placed from the Eye, or from the Object, (or from one another, if there be two or more Glasses used) and all this according to the Rules of Art. The same sort of Caution should be used also in Mediums which assist the Hearing, such as Speaking-Trumpets, Hearing-Trumpets, &c.

7. If the Object may be proposed to more Senfes than one, let us call in the Assistance of some other Senses to examine it, and this will increase the Evidence of what one Sense dictates. Ex. gr. Our Ear may assist our Eye in judging of the Distance of Bodies, which are both visible and sonorous, as an exploded Canon, or a Cloud charged with Thunder. Our Feeling may assist our Sight in judging of the Kind, the Shape, Situation or Distance of Bodies that are near at Hand, as whether a Garment be Silk or Stuff, &c. So if I both C. V. S. 2. The right Use of Reason. 253 see, hear, and embrace my Friend, I am sure he is

present.

8. We should also make feveral Trials, at some distant Times, and in different Circumstances, comparing former Experiments with later, and our own Observations with those of other Perfons.

It is by fuch Methods as these that modern Philosophy has been so greatly improved by the use of sensible Experiments.

SECT. II.

Principles and Rules of Judgment in Matters of Reason and Speculation.

IT is by Reason we judge both in Matters of Speculation and Practice; there are peculiar Rules which relate to Things practical, whether they be Matters of Religion, Morality or Prudence, yet many Things in this Section may be applied to practical Enquiries, and Matters of Faith, tho' it chiefly relates to Knowledge or Speculations of Reason.

1. Whatsoever clear Ideas we can join together without Inconsistency, are to be counted possible, because Almighty Power can make whatsoever we can conceive.

2. From the mere Possibility of a Thing we cannot infer its actual Existence; nor from the Non-Existence of it can we infer its Impossibility.

Note, The Idea of God seems to claim an Exemption from this general Rule, for if he be possible, he certainly exists, because the very Idea includes Eternity, and he cannot begin to be: If he exist not, he is impossible, for the very same Reason.

3. What-

3. Whatfoever is evidently contained in the Idea of any thing, may be affirmed of that thing with Certainty. Reason is contained in the Idea of a Man; and Existence is contained in the Idea of God; and therefore we may affirm God exists, and

Man is reasonable.

4. It is impossible that the same Thing should be, and not be at the same Time, and in the same Respect. Thence it follows, that two contradictory Ideas cannot be joined in the same Part of the same Subject, at the same Time, and in the same Respects: Or, that two contradictory Propositions can never be both true.

5. The more we converse with any Subject in its various Properties, the better Knowledge of it we are likely to attain; and by frequent and repeated Enquiries and Experiments, Reasonings and Conversations about it, we confirm our true Judgments of that Thing, and correct our former Miftakes.

6. Yet after our utmost Enquiries, we can never be affur'd by Reason, that we know all the

Powers and Properties of any finite Being.

7. If finite Beings are not adequately known by us, much less are Things infinite: For it is of the Nature of a finite Mind not to be able to compre-

hend what is infinite.

8. We may judge and argue very justly and certainly concerning Infinites, in some Parts of them, or fo far as our Ideas reach, tho' the Infinity of them hath something incomprehensible in it. And this is built on the general Rule following (viz.)

9. Whatsoever is sufficiently clear and evident, ought not to be denied, tho' there are other things belonging to the same Subject which cannot be comprehended. I may affirm many Things with

Certainty

Certainty concerning human Souls, their Union with Bodies, concerning the Divisibility of Matter, and the Attributes of God, tho' many other Things relating to them are all Darkness to us.

10. If an Opinion propos'd has either no Arguments, or equal Arguments for and against it, we must remain in perfect Suspense about it, till con-

vincing Evidence appear on one Side.

not constrain us to determine, we should not immediately yield up our Assent to meer probable Arguments, without a due Reserve, if we have any reasonable Hope of attaining greater Light and Evidence on one Side or the other: For when the Balance of the Judgment once resigns its Equilibrium or Neutrality to a meer probable Argument, it is too ready to settle itself on that Side, so that the Mind will not easily change that Judgment, tho' bright and strong Evidence appear afterwards on the other Side.

12. Of two Opinions if one has unanswerable Difficulties attending it, we must not reject it immediately, till we examine whether the contrary

Opinion has not Difficulties as unanswerable.

13. If each Opinion has Objections against it which we cannot answer, or reconcile, we should rather embrace that which has the least Difficulties in it, and which has the best Arguments to support it: And let our Assent bear Proportion to

the superior Evidence.

14. If any Doctrine hath very strong and sufficient Light and Evidence to command our Assent, we should not reject it because there is an Objection or two against it which we are not able to answer; for upon this Foot a common Christian would be bassled out of every Article of his Faith, and must renounce even the Dictates of his Rea-

fon and his Senses; and the most learned Man perhaps would hold but very sew of them fast; for some Objections which attend the sacred Doctrines of the Eternity and the Omnipresence of God, and the philosophical Doctrines of Light, Atoms, Space, Motion, &c. are hardly solvable to this Day.

in Matters of Speculation or Practice, and neither of them has certain and convincing Evidence, it is generally safest to take the middle Way. Moderation is more likely to come near the Truth than doubtful Extremes. This is an excellent Rule to judge of the Characters and Value of the greatest Part of Persons and Things; for Nature seldom deals in Superlatives. It is a good Rule also by which to form our Judgment in many speculative Controverses; a reconciling Medium in such Cases does often best secure Truth as well as Peace.

16. When two different Propositions have each a very strong and cogent Evidence, and do not plainly appear inconsistent, we may believe both of them, tho' we cannot at present see the Way to reconcile them. Reason, as well as our own Consciousness, assures us that the Will of Man is free, and that Multitudes of human Actions are in that Respect contingent; and yet Reason and Scripture affure us that God foreknows them all, and this implies a necessary Futurity. Now tho' learned Men have not to this Day hit on any clear and happy Method to reconcile these Propositions, yet fince we do not see a plain Inconsistency in them, we justly believe them both, because their Evidence is great.

17. Let us not therefore too suddenly determine in difficult Matters that two Things are utterly inconsistent: For there are many Propositions which

may

may appear inconsistent at first, and yet afterwards we find their Consistency, and the Way of reconciling them may be made plain and easy: As also, there are other Propositions which may appear consistent at first, but after due Examination we find their Inconsistency.

18. For the same Reason we should not call those Difficulties utterly *insolvable*, or those Objections *unanswerable*, which we are not presently able to answer: Time and Diligence may give far-

ther Light.

19. In short, if we will secure ourselves from Error, we should not be too frequent or hasty in afferting the certain Confistency or Inconsistency, the absolute Universality, Necessity, or Impossibility of Things, where there is not the brightest Evidence. He is but a young and raw Philosopher, who, when he fees two particular Ideas evidently agree, immediately afferts them to agree univerfally, to agree necessarily, and that it is impossible it should be otherwise: Or when he sees evidently two particular Ideas disagree, he presently asserts their natural Inconfishency, their utter Impossibility of Agreement, and calls every thing contrary to his Opinion Absurdity and Nonsense. A true Philosopher will affirm or deny with much Caution and Modesty, unless he has thoroughly examined and found the Evidence of every Part of his Affertion exceeding plain.

20. Let us have a Care of building our Assurance of any important Point of Doctrine upon one fingle Argument, if there are more to be obtained. We should not slight and reject all other Arguments which support the same Doctrine, lest if our favourite Argument should be resulted, and fail us, we should be tempted to abandon that important Principle of Truth. I think this was a very

S culpable

culpable Practice in Descartes, and some of his Followers, who when he had found out the Argument for the Existence of God, derived from the Idea of a most perfect and self-existent Being, he seemed to despise, cancel, and abandon all other Arguments against Atheism.

for any Opinion refuted, we should not immediately give up the *Opinion* itself; for perhaps it may be a Truth still, and we may find it to be justly supported by other Arguments, which we might once think weaker, or perhaps by new Ar-

guments which we knew not before.

Evidence of a Proposition, where both the Kind and the Force of the Arguments or Proofs are as great as the Nature of the Thing admits, and as the Necessity or Exigence of the Case requires. So if we have a credible and certain Testimony that Christ rose from the Dead, it is enough; we are not to expect mathematical or ocular Demonstration for it, at least in our Day.

23. Tho' we should seek what Proofs may be attain'd of any Proposition, and we should receive any Number of Arguments which are just and evident for the Confirmation of the same Truth, yet we must not judge of the Truth of any Proposition by the Number of Arguments which are brought to support it, but by the Strength and Weight of them: A Building will stand sirmer and longer on four large Pillars of Marble, than on ten of Sand, or Earth, or Timber.

24. Yet where certain Evidence is not to be found or expected, a confiderable Number of probable Arguments carry great Weight with them even in Matters of Speculation. That is a probable Hypothesis in Philosophy or in Theology, which

goes

goes farthest toward the Solution of many difficult Questions arising on any Subject.

SECT. III.

Principles and Rules of Judgment in Matters of Morality and Religion.

TERE it may be proper in the first Place to mention a few Definitions of Words or Terms.

By Matters of Morality and Religion, I mean those things which relate to our Duty to God, our Selves, or our Fellow-Creatures.

Moral Good, or Virtue, or Holiness, is an Action or Temper conformable to the Rule of our Duty. Moral Evil, or Vice, or Sin, is an Action or Temper unconformable to the Rule of our Duty, or a Neglect to fulfil it.

Note, The Words Vice or Virtue chiefly imply the Relation of our Actions to Men and this World: Sin and Holiness rather imply their Re-

lation to God and the other World.

Natural Good is that which gives us Pleasure or Satisfaction. Natural Evil is that which gives us Pain or Grief.

Happiness consists in the Attainment of the highest and most lasting natural Good. Misery consists in suffering the highest and most lasting natural Evil; that is, in short, Heaven or Hell

Tho' this be a just Account of perfect Happiness and perfect Misery, yet wheresoever Pain overbalances Pleasure, there is a Degree of Misery; and wherefoever Pleasure overbalances Pain, there is a Degree of Happiness.

I proceed now to lay down some Principles and Rules of Judgment in Matters of Morality and Re-

ligion.

of Non-Conformity to it determines their Actions to be morally good or evil.

2. Whatsoever is really an immediate Duty toward our selves, or toward our Fellow-Creatures, is more remotely a Duty to God; and therefore in the Practice of it we should have an Eye to the Will of God as our Rule, and to his Glory as our

End.

- 3. Our wise and gracious Creator has closely united our Duty and our Happiness together; and has connected Sin, or Vice, and Punishment; that is, he has ordained that the highest natural Good and Evil should have a close Connection with moral Good and Evil, and that both in the Nature of Things, and by his own positive Appointment.
- 4. Conscience should seek all due Information in order to determine what is Duty, and what is Sin, because Happiness and Misery depend upon it.
- 5. On this Account our Inclination to present temporal Good, and our Aversion to present temporal Evil, must be wisely overbalanced by the Consideration of future and eternal Good or Evil, that is, Happiness or Misery. And for this Reason we should not omit a Duty, or commit a Sin, to gain any temporal Good, or to avoid any temporal Evil.

6. Tho' our natural Reason in a State of Innocence might be sufficient to find out those Duties which were necessary for an innocent Creature, in order to abide in the Favour of his Maker, yet in a fallen State our natural Reason is by no means sufficient to find out all that is necessary to restore a sinful Creature to the divine Favour.

ous Ages of Mankind to reveal to finful Men what he requires of them in order to their Restoration, and has appointed in his Word some peculiar Matters of Faith and Practice, in order to their Salvation. This is called revealed Religion, as the Things knowable concerning God, and our Duty by the Light of Nature are called natural Re-

ligion.

- 8. There are also many Parts of Morality, and natural Religion, or many natural Duties relating to God, to our selves, and to our Neighbours, which would be exceeding difficult and tedious for the Bulk of Mankind to find out and determine by natural Reason; therefore it has pleased God in this sacred Book of Divine Revelation to express the most necessary Duties of this kind in a very plain and easy manner, and made them intelligible to Souls of the lowest Capacity; or they may be very easily derived thence by the Use of Reason.
- 9. As there are some Duties much more necesfary, and more important than others are, so every Duty requires our Application to understand and practise it in Proportion to its Necessity and Importance.
- 10. Where two Duties seem to stand in Opposition to each other, and we cannot practise both, the less must give Way to the greater, and the Omission of the less is not sinful. So ceremo-

nias

nial Laws give Way to moral: God will have

Mercy and not Sacrifice.

judge of the different Degrees of their Necessity and Importance by Reason, according to their greater or more apparent Tendency to the Honour of God and the good of Men: But in Matters of reveal'd Religion, it is only divine Revelation can certainly inform us what is most necessary and most important; yet we may be affished also in that Search by the Exercises of Reason.

12. In Actions wherein there may be fome Scruple about the Duty or Lawfulness of them, we should choose always the safest Side, and abstain as far as we can from the Practice of Things whose

Lawfulness we suspect.

Life, or in Religion, are generally the most evident, both in the Nature of Things, and in the Word of God; and where Points of Faith or Practice are exceeding difficult to find out, they cannot be exceeding important. This Proposition may be proved by the Goodness and Faithfulness of God, as well as by Experience and Observation.

Forms of Religion, as well as human Affairs, there is frequently a present Necessity of speedy Action one Way or another: In such a Case, having surveyed Arguments on both Sides, as far as our Time and Circumstances admit, we must guide our Practice by those Reasons which appear most probable, and seem at that Time to overbalance the rest; yet always reserving room to admit farther Light and Evidence, when such Occurrences return again. It is a Preponderation of circumstantial Arguments

Arguments that must determine our Actions in a thousand Occurrences.

15. We may also determine upon probable Arguments where the Matter is of small Consequence, and would not answer the Trouble of seeking after Certainty. Life and Time are more precious than to have a large Share of them laid out in scrupulous Enquiries, whether smoaking Tobacco, or wearing a Periwig be lawful or no.

16. In Affairs of greater Importance, and which may have a long and lasting, and extensive Influence on our future Conduct or Happiness, we should not take up with Probabilities, if Certainty may be attained. Where there is any Doubt on the Mind, in such Cases we should call in the Assistance of all manner of Circumstances, Reasons, Motives, Consequences on all Sides: We must wait longer, and with earnest Request seek human and divine Advice before we fully determine our Judgment and our Practice, according to the old Roman Sentence, Quod statuendum est semel, deliberandum est diu. We should be long in considering what we must determine once for all.

SECT. IV.

Principles and Rules of Judgment in Matters of human Prudence.

THE great Design of Prudence, as distinct from Morality and Religion, is to determine and manage every Affair with Decency, and to the best Advantage.

That is decent, which is agreeable to our State, Condition, or Circumstances, whether it be in

Behaviour, Discourse, or Action.

That

That is advantagious which attains the most and best Purposes, and avoids the most and greatest Inconveniencies.

As there is infinite Variety in the Circumstances of Persons, Things, Actions, Times and Places, so we must be furnished with such general Rules as are accommodable to all this Variety by a wise Judgment and Discretion: For what is an Act of consummate Prudence in some Times, Places and Circumstances, would be consummate Folly in others. Now these Rules may be ranged in the following manner.

1. Our Regard to Perfons or Things should be governed by the Degree of Concernment we have with them, the Relation we have to them, or the Expectation we have from them. These should be the Measures by which we should proportion our Diligence and Application in any thing that

relates to them.

2. We should always consider whether the Thing we pursue be attainable; whether it be worthy our Pursuit; whether it be worthy the Degree of Pursuit; whether it be worthy of the Means used in order to attain it. This Rule is necessary both in Matters of Knowledge, and Matters of Practice.

3. When the Advantages and Disadvantages, Conveniencies and Inconveniencies of any Action are balanc'd together, we must finally determine on that Side which has the superior Weight; and the sooner in things which are necessarily and speedily to be done or determined.

4. If Advantages and Disadvantages in their own Nature are equal, then those which are most certain or likely as to the Event should turn the Scale of our Judgment, and determine our Prac-

tice.

5. Where the Improbabilities of Success or Advantage are greater than the Probabilities, it is not Prudence to act or venture. It is proper to enquire whether this be not the Case in almost all Lotteries; for they that hold Stakes will certainly secure Part to themselves; and only the Remainder being divided into Prizes must render the Improbability of Gain to each Adventurer greater than the Probability.

6. We should not despise or neglect any real Advantage, and abandon the Pursuit of it, tho we cannot attain all the Advantages that we de-This would be to act like Children, who are fond of something which strikes their Fancy most, and sullen and regardless of every thing else,

if they are not humour'd in that Fancy.

7. Tho' a general Knowledge of Things be useful in Science and in human Life, yet we should content our felves with a more superficial Knowledge of those things which have the least Rela-

tion to our chief End and Design.

8. This Rule holds good also in Matters of Bufiness and Practice, as well as in Matters of Knowledge; and therefore we should not grasp at every thing, lest in the End we attain nothing. Persons that either by an Inconstancy of Temper, or by a vain Ambition, will pursue every fort of Art and Science, Study and Business, seldom grow excellent in any one of them: And Projectors who form twenty Schemes seldom use sufficient Application to finish one of them, or make it turn to good Account.

9. Take Heed of delaying and trifling amongst the Means instead of reaching at the End. Take heed of wasting a Life in meer speculative Studies, which is called to Action and Employment: Dwell not too long in philosophical, mathematical, or

grammatical

grammatical Parts of Learning, when your chief Design is Law, Physick, or Divinity. Don't spend the Day in gathering Flowers by the Way Side, lest Night come upon you before you arrive at your Journey's End, and then you will not reach it.

10. Where the Case and Circumstances of wise and good Men resemble our own Case and Circumstances, we may borrow a great deal of Instruction toward our prudent Conduct from their Example, as well as in all Cases we may learn much

from their Conversation and Advice.

never Speculation in Matters of human Prudence can never be a perfect Director without Experience and Observation. We may be content therefore in our younger Years to commit some unavoidable Mistakes in Point of Prudence, and we shall see Mistakes enough in the Conduct of others, both which ought to be treasur'd up amongst our useful Observations, in order to teach us better Judgment for Time to come. Sometimes the Mistakes, Imprudences and Follies, which our selves or others have been guilty of, give us brighter and more effectual Lessons of Prudence, than the wifest Counsels, and the fairest Examples could ever have done.

SECT. V.

Principles and Rules of Judgment in Matters of human Testimony.

THE Evidence of human Testimony is not so proper to lead us into the Knowledge of the Essence and inward Nature of Things, as to acquaint us with the Existence of Things, and to inform

inform us of Matters of Fact both past and present. And tho' there be a great deal of Fallibility in the Testimony of Men, yet there are some Things we may be almost as certain of, as that the Sun shines, or that five Twenties make a Hundred. Who is there at London that knows any thing of the World, but believes there is such a City as Paris in France; that the Pope dwells at Rome; that Julius Cæsar was an Emperor, or that Euther had a great Hand in the Reformation?

If we observe the following Rules, we may arrive at such a Certainty in many Things of human Testimony, as that it is morally impossible we should be deceived, i. e. we may obtain a moral

Certainty.

1. Let us consider whether the Thing reported be in itself possible; if not, it can never be

credible, whosoever relates it.

2. Confider farther whether it be probable, whether there are any concurring Circumstances to prove it, beside the mere Testimony of the Person that relates it. I confess if these last Conditions are wanting, the thing may be true, but then it ought to have the stronger Testimony to sup-

port it.

3. Consider whether the Person who relates it be capable of knowing the Truth: Whether he be a skilful Judge in such Matters, if it be a Business of Art, or a nice Appearance in Nature, or some curious Experiment in Philosophy. But if it be a mere Occurrence in Life, a plain, sensible Matter of Fact, it is enough to enquire whether he who relates it were an Eye or Ear-Witness, or whether he himself had it only by Hearsay, or can trace it up to the Original.

4. Consider whether the Narrator be honest and faithful, as well as skilful: Whether he hath no Biass upon his Mind, no peculiar Gain or Prosit by believing or reporting it, no Interest or Principle which might warp his own Belief aside from Truth, or which might tempt him to prevaricate, to speak falsly, or to give a Representation a little different from the naked Truth of Things. In short, whether there be no Occasion of Suspicion

concerning his Report.

ther in the Report of this Matter; and if so, then whether these Persons who join'd together in their Testimony might not be suppos'd to combine together in a Falshood. Whether they are Persons of sufficient Skill, Probity and Credit. It might be also enquired whether they are of different Nations, Sects, Parties, Opinions, or Interests. For the more divided they are in all these, the more likely is their Report to be true, if they agree together in their Account of the same Thing; and especially if they persist in it without wavering.

o. Consider farther, whether the Report were capable of being easily refuted at first if it had not been true; if so, this confirms the Testimony.

7. Enquire yet again, whether there hath been a constant, uniform Tradition and Belief of this Matter from the very first Age or Time when the Thing was transacted, without any reasonable

Doubts or Contradictions. Or,

8. If any Part of it hath been doubted by any confiderable Persons, whether it has been fearched out and afterwards confirmed, by having all the Scruples and Doubts removed. In either of these Cases the Testimony becomes more firm and credible.

- 9. Enquire on the other Hand, whether there are any considerable Objections remaining against the Belief of that Proposition so attested. Whether there be any thing very improbable in the thing it self. Whether any concurrent Circumstances seem to oppose it. Whether any Person or Persons give a positive and plain Testimony against it. Whether they are equally skilful, and equally faithful as those who affert it. Whether they be as many or more in Number, and whether they might have any fecret Biass or Influence on them to contradict it.
- 10. Sometimes the entire Silence of a Thing may have fomething of Weight toward the Decision of a doubtful Point of History, or a Matter of human Faith, (viz.) where the Fact is pretended to be publick, if the Persons who are silent about it were skilful to observe, and could not but know fuch an Occurrence; if they were engaged by Principle or by Interest to have declared it; if they had fair Opportunity to speak of it: And these Things may tend to make a Matter suspicious, if it be not very well attested by positive Proof.
- 11. Remember that in some Reports there are more Marks of Falshood than of Truth, and in others there are more Marks of Truth than of Falfbood. By a Comparison of all these things together, and putting every Argument on one Side and the other into the Balance, we must form as good a Judgment as we can which Side preponderates; and give a strong or a feeble Assent or Dissent, or with-hold our Judgment entirely, according to greater or lesser Evidence, according to more plain or dubious Marks of Truth or Fallbood.

12. Observe that in Matters of human Testimony, there is oftentimes a great Mixture of Truth with Falshood in the Report itself: Some Parts of the Story may be perfectly true, and some utterly false; and some may have such a blended Confusion of Circumstances which are a little warpt aside from the Truth, and misrepresented, that there is need of good Skill and Accuracy to form a Judgment concerning them, and determine which Part is true, and which is false. The whole Report is not to be believed, because some Parts are indubitably true, nor the whole to be rejected, because some Parts are as evident Fallhoods.

We may draw two remarkable Observations

from this Section.

Observ. I. How certain is the Truth of the Christian Religion, and particularly of the Resurrection of Christ, which is a Matter of Fact on which Christianity is built! We have almost all the concurrent Evidences that can be derived from buman Testimony joining to confirm this glorious Truth. The Fact is not impossible; concurrent Circumstances cast a favourable Aspect on it; it was foretold by one who wrought Miracles, and therefore not unlikely, nor unexpected: The Apostles and first Disciples were Eye and Ear-Witnesses, for they conversed with their risen Lord; they were the most plain, honest Men in themselves; the Temptations of worldly Interests did rather discourage their Belief and Report of it: They all agree in this Matter, tho' they were Men of different Characters; Pharisees and Fishermen, and Publicans, Men of Judea and Galilee, and perhaps some Heathens, who were early converted: The Thing might easily have been difproved if it were false; it hath been conveyed by constant

constant Tradition and Writing down to our Times; those who at first doubted were afterwards convinced by certain Proofs; nor have any pretended to give any Proof of the contrary, but meerly denied the Fact with Impudence in Oppo-fition to all these Evidences.

Observ. II. How weak is the Faith which is due to a Multitude of things in antient human History! For tho' many of these Criteria, or Marks of Credibility are found plainly in the general and publick Facts, yet as to a Multitude of Particulars, how deficient are they in such Evidence as should demand our Assent? Perhaps there is nothing that ever was done in all past Ages, and which was not a publick Fact, so well attested as the Resurrection of Christ.

SECT. VI.

Principles and Rules of Judgment in Matters of di-vine Testimony.

S human Testimony acquaints us with Matters of Fast, both past and present, which lye beyond the Reach of our own personal Notice; so divine Testimony is suited to inform us both of the Nature of Things, as well as Matters of Fact, and of Things future, as well as present or past.

Whatsoever is dictated to us by God himself, or by Men who are divinely inspired, must be believed with full Assurance. Reason demands us to believe whatsoever divine Revelation dictates: For God is perfectly wife, and cannot be deceived; he is faithful and good, and will not deceive his Creatures: And when Reason has found out the certain Marks or Credentials of divine Testimony to belong

belong to any Proposition, there remains then no farther Enquiry to be made, but only to find out the true Sense and Meaning of that which God has revealed, for Reason itself demands the Belief of it.

Now divine Testimony or Revelation requires these

following Credentials.

I. That the Propositions or Doctrines revealed be not inconsistent with Reason; for intelligent Creatures can never be bound to believe real Inconsistencies. Therefore we are sure the Popish Doctrine of Transubstantiation is not a Matter of divine Revelation, because it is contrary to all our Senses, and our Reason, even in their proper Extercises.

God can dictate nothing but what is worthy of himself, and agreeable to his own Nature and divine Perfections. Now many of these Perfections are discoverable by the Light of Reason, and whatsoever is inconsistent with these Perfections, cannot be a divine Revelation.

But let it be noted that in Matters of Practice toward our Fellow-Creatures, God may command us to act in a manner contrary to what Reason would direct antecedent to that Command. Abraham was commanded to offer up his Son a Sacrifice: The Israelites were ordered to borrow of the Egyptians without paying them, and to plunder and flay the Inhabitants of Canaan: Because God has a sovereign Right to all Things, and can with Equity dispossess his Creatures of Life, and every Thing which he has given them, and especially such finful Creatures as Mankind; and he can appoint whom he pleases to be the Instruments of this just Dispossession or Deprivati-So that these divine Commands are not really inconfistent with right Reason; for whatsoever

is so cannot be believed where that Inconsistency

appears.

of Revelation must be consistent with itself; every Part of it must be consistent with each other: And tho' in Points of Practice latter Revelation may repeal or cancel former divine Laws, yet in Matters of Belief no latter Revelation can be inconsistent with what has been heretofore revealed.

- 3. Divine Revelation must be confirmed by some divine and supernatural Appearances, some extraordinary Signs or Tokens, Visions, Voices, or Miracles wrought, or Prophesies sulfilled. There must be some Demonstrations of the Presence and Power of God, superior to all the Powers of Nature, or the settled Connection which God as Creator has established among his Creatures in this visible World.
- 4. If there are any such extraordinary and wonderful Appearances and Operations brought to contest with, or to oppose divine Revelation, there must and always will be such a Superiority on the Side of that Revelation which is truly divine, as to manifest that God is there. This was the Case when the Egyptian Sorcerers contended with Moses: But the Wonders which Moses wrought did so far transcend the Power of the Magicians, as made them confess, It was the Finger of God.

Revelation must be either known to ourselves, by our own personal Observation of them, or they must be sufficiently attested by others, according to the Principles and Rules by which Matters of human Faith are to be judged in the foregoing Sec-

tion.

Some of those who lived in the Nations and Ages where Miracles were wrought, were Eye and Ear-Witnesses of the Truth and Divinity of the Revelation; but we who live in these distant Ages, must have them derived down to us by just and uncontestable History and Tradition. We also even in these distant Times may see the Accomplishments of some antient Predictions, and thereby obtain that Advantage toward the Confirmation of our Faith in divine Revelation beyond what those Persons enjoyed who lived when the Predictions

were pronounced.

6. There is another very confiderable Confirmation of divine Testimony; and that is, when the Doctrines themselves either on the Publication or the Belief of them produce supernatural Effects. Such were the miraculous Powers which were communicated to Believers in the first Ages of Christianity, the Conversion of Jews and Gentiles, the amazing Success of the Gospel of Christ without human Aid, and in Opposition to a thousand Impediments, its Power in changing the Hearts and Lives of ignorant and vicious Heathens, and wicked and profane Creatures in all Nations, and filling them with a Spirit of Virtue, Piety and Goodnels. Wherefoever Persons have found this Effect in their own Hearts, wrought by a Belief of the Gospel of Christ, they have a Witness in themselves of the Truth of it, and abundant Reafon to believe it divine.

Of the Difference between Reason and Revelation, and in what Sense the latter is superior, see more in Chap. II. Sect. 9 and Chap. IV. Direct. 6.

SECT. VII.

Principles and Rules of judging, concerning Things past, present, and to come, by the mere Use of Reason.

THO' we attain the greatest Assurance of Things past and suture by divine Faith, and learn many Matters of Fact both past and present by human Faith, yet Reason also may in a good Degree assist us to judge of Matters of Fact both past, present, and to come, by the following Principles:

1. There is a System of Beings round about us, of which we ourselves are a Part, which we call the World; and in this World there is a Course of Nature, or a settled Order of Causes, Effects, Antecedents, Concomitants, Consequents, &c. from which the Author of Nature doth not vary but upon very

important Occasions.

2. Where Antecedents, Concomitants and Confequents, Caufes and Effetts, Signs and Things signified; Subjects and Adjuncts are necessarily connected with each other, we may infer the Causes from the Effects, and Effects from Causes, the Antecedents from the Consequents, as well as Consequents from Antecedents, &c. and thereby be pretty certain of many Things both past, present, and to come. It is by this Principle that Astronomers can tell what Day and Hour the Sun and Moon were eclipsed five hundred Years ago, and predict all future Eclipses as long as the World shall stand. They can tell precisely at what Minute the Sun rises or sets this Day at Pequin in China, or what Altitude the Dog-star had at Midnight or Midnoon in Rome, on the Day when Julius Cæsar was slain.

Gardiners upon the same Principle can foretel the Months when every Plant will be in Bloom, and the Plowman knows the Weeks of Harvest: We are sure if there be a Chicken, there was an Egg: If there be a Rainbow, we are certain it rains not far off: If we behold a Tree growing on the Earth, we know it has naturally a Root under Ground.

3. Where there is such a necessary Connection between Causes and Essets, Antecedents and Consequents, Signs and Things signified, we know also that like Causes will have like Essects, and proportionable Causes will have proportionable Essects, contrary Causes will have contrary Essects; and observing Men may form many Judgments by the Rules of Similitude and Proportion, where the Causes, Essects, &c. are not entirely the same.

4. Where there is but a probable and uncertain Connection between Antecedents, Concomitants and Confequents, we can give but a Conjecture, or a probable Determination. If the Clouds gather, or the Weather-Glass sinks, we suppose it will rain: If a Man spit Blood frequently with coughing, we suppose his Lungs are hurt: If very dangerous Symp-

toms appear, we expect his Death.

J. Where Causes operate freely with a Liberty of Indifference to this or the contrary, there we cannot certainly know what the Effect will be: For it seems to be contingent, and the certain Knowledge of it belongs only to God. This is the Case

in the greatest Part of human Actions.

6. Yet wise Men by a just Observation of human Nature will give very probable Conjectures in this Matter also concerning Things past, or Things future, because human Nature in all Ages and Nations has such a Conformity to itself. By a Knowledge of the Tempers of Men and their present Circumstances, we may be able to give a

C. V. S. 7. The right Use of Reason. 277

happy Guess what their Conduct will be, and what will be the Event by an Observation of the like Cases in former Times. This made the Emperor Marcus Antoninus to say, "By looking back into History, and considering the Fate and Revolutions of Governments, you will be able to form a Guess,

of Governments, you will be able to form a Guess,
and almost prophesy upon the future. For Things
had present and to some are francely uniform

46 past, present, and to come, are strangely uniform, 46 and of a Colour; and are commonly cast in the

" Same Mould. So that upon the Matter, forty Years of human Life may serve for a Sample of

" ten thousand." Collier's Antoninus, Book VII. Sect. 50.

7. There are also some other Principles of judging concerning the past Actions of Men in sormer Ages, beside Books, Histories and Traditions, which are the Mediums of conveying human Testimony; as we may infer the Skill and Magnificence of the Antients by some Fragments of their Statues, and Ruins of their Buildings. We know what Roman Legions came into Great Britain by Numbers of Bricks dug out of the Earth in some Parts of the Island, with the Marks of some particular Legion upon them, which must have been employed there in Brick-making. We rectify some Mistakes in History by Statues, Coins, old Altars, Utensils of War, &c. We consirm or disprove some pretended Traditions and historical Writings, by Medals, Images, Pictures, Urns, &c.

Thus I have gone thro' all those particular Objects of our Judgment which I first propos'd, and have laid down Principles and Rules by which we may safely conduct ourselves therein. There is a Variety of other Objects concerning which we are occasionally called to pass a Judgment, (viz.) The Characters of Persons, the Value and Worth

l` 3

of Things, the Sense and Meaning of particular Writers, Matters of Wit, Oratory, Poesy, Matters of Equity in judicial Courts, Matters of Traffick and Commerce betwixt Man and Man, which would be endless to enumerate. But if the general and special Rules of Judgment which have been mentioned in these two last Chapters are treasured up in the Mind, and wrought into the very Temper of our Souls in our younger Years, they will lay a Foundation for just and regular Judgment concerning a thousand special Occurrences in the religious, civil and learned Life.

THE

Third PAR T

OF

LOGICK.

Of Reasoning and Syllogism.

S the first Work of the Mind is Perception, whereby our Ideas are framed, and the second is Judgment, which joins or disjoins our Ideas, and forms a Proposition, so the third Operation of the Mind is Reasoning, which joins several Propositions together, and makes a Syllogism, that is, an Argument whereby we are wont to infer something that is less known, from Truths which are more evident.

In treating of this Subject, let us consider more

particularly

1. The Nature of a Syllogism, and the Parts of

which it is composed.

2. The several kinds of Syllogisms, with particular Rules relating to them. 3. The Doctrine of Sophisms, or false Reasoning, together with the Means of avoiding them, and the manner of solving or answering them.

4. Some general Rules to direct our Reasoning.

CHAP. I.

Of the Nature of a Syllogism, and the Parts of which it is composed,

IF the mere Perception and Comparison of two Ideas would always shew us whether they agree or difagree; then all rational Propositions would be Matters of Intelligence, or first Principles, and there would be no Use of Reasoning, or drawing any Consequences. It is the Narrowness of the human Mind which introduces the Necesfity of Reasoning. When we are unable to judge of the Truth or Falshood of a Proposition in an immediate manner, by the meer Contemplation of its Subject and Predicate, we are then constrained to use a Medium, and to compare each of them with fome third Idea, that by feeing how far they agree or disagree with it, we may be able to judge how far they agree or disagree among themselves: As, if there are two Lines A and B, and I know not whether they are equal or no, I take a third Line C, or an *Inch*, and apply it to each of them; if it agree with them both, then I infer that A and Bare equal; but if it agree with one and not with the other, then I conclude A and B are unequal: If it agree with neither of them, there can be no Comparison.

So if the Question be whether God must be worshipped, we seek a third Idea, suppose the Idea of a Creator, and fay,

Our Creator must be worshipped.

God is our Creator.

Therefore God must be worshipped.

The Comparison of this third Idea, with the two distinct Parts of the Question, usually requires two Propositions, which are called the Premisses: The third Proposition which is drawn from them is the Conclusion, wherein the Question itself is anfwered, and the Subject and Predicate joined either in the Negative or the Affirmative.

The Foundation of all affirmative Conclusions is laid in this general Truth, that so far as two propos'd Ideas agree to any third Idea, they agree al-to among themselves. The Character of Creator agrees to God, and Worship agrees to a Creator, therefore Worship agrees to God.

The Foundation of all negative Conclusions is this, that where one of the two proposed Ideas agrees with the third Idea, and the other disagrees with it, they must needs disagree so far also with one another'; as, if no Sinners are happy, and if Angels are happy, then Angels are not Sinners.

Thus it appears what is the strict and just Notion of a Syllogism: It is a Sentence or Argument made up of three Propositions so disposed, as that the last is necessarily infer'd from those which go before, as in the Instances which have been just

mentioned.

In the Constitution of a Syllogism two Things may be considered (viz.) the Matter and the Form of it.

The Matter of which a Syllogism is made up, is three Propositions; and these three Propositions are made up of three Ideas or Terms variously joined. The three Terms are called the remote Matter of a Syllogism, and the three Propositions, the Proxime or immediate Matter of it.

The three Terms are named the Major, the

Minor, and the Middle.

The Predicate of the Conclusion is called the major Term, because it is generally of larger Extension than the minor Term, or the Subject. The major and minor Terms are called the Extremes.

The middle Term is the third Idea invented and disposed in two Propositions in such a manner as to shew the Connection between the major and minor Term in the Conclusion; for which Reason the middle Term itself is sometimes called the Argument.

That Proposition which contains the Predicate of the Conclusion, connected with the middle Term, is usually called the major Proposition, whereas the minor Proposition connects the middle Term with the Subject of the Conclusion, and is some-

times called the Assumption.

Note, This exact Distinction of the several Parts of a Syllogism, and of the major and minor Terms connected with the middle Term, in the major and minor Propositions, does chiefly belong to simple or tategorical Syllogisms, of which we shall speak in the next Chapter, tho' all Syllogisms whatsoever have something analogical to it.

Note farther, that the major Proposition is generally placed first, and the minor second, and the Conclusion in the last Place, where the Syllogism

is regularly compos'd and reprefented.

The Form of a Syllogism is the framing and disposing of the Premisses according to Art, or just Principles of Reasoning, and the regular Inference of the Conclusion from them.

C. H. S. I. The right Use of Reason. 283

The Act of Reasoning or inferring one thing from another, is generally express and known by the Particle Therefore, when the Argument is formed according to the Rules of Art; tho' in common Discourse or Writing, such causal Particles as For, Because, manifest the Act of Reasoning as well as the illative Particles Then and Therefore: And wheresoever any of these Words are used, there is a perfect Syllogism express or imply'd, tho' perhaps the three Propositions do not appear, or are not placed in regular Form.

CHAP. II.

Of the various Kinds of Syllogisms, with particular Rules relating to them.

Yllogisms are divided into various Kinds, either according to the Question which is proved by them, according to the Nature and Composition of them, or according to the middle Term, which is us'd to prove the Question.

SECT. I.

Of universal and particular Syllogisms, both negative and affirmative.

A Coording to the Question which is to be proved, so Syllogisms are divided into universal Affirmative, universal Negative, particular Affirmative, and particular Negative. This is often called a Division of Syllogisms drawn from the Conclusion; for so many sorts of Conclusions there may

may be which are marked with the Letters A,

E, I, O.

In an universal affirmative Syllogism, one Idea is proved universally to agree with another, and may be universally affirmed of it, as every Sin deferves Death, every unlawful Wish is a Sin; therefore every unlawful Wish deserves Death.

In an universal negative Syllogism, one Idea is proved to disagree with another Idea universally, and may be thus denied of it; as, no Injustice can be pleasing to God; all Persecution for the Sake of Conscience is Injustice; therefore no Persecution for Conscience Sake can be pleasing to God.

Particular affirmative, and particular negative Syllogisms may be easily understood by what is said of Universals, and there will be sufficient Examples given of all these in the next Section.

The general Principle upon which these universal and particular Syllogisms are sounded is this; whatsoever is affirmed or denied universally of any Idea, may be affirmed or denied of all the particular Kinds or Beings, which are contained in the Extension of that universal Idea. So the Desert of Death is affirmed universally of Sin, and an unlawful Wish is one particular Kind of Sin, which is contained in the universal Idea of Sin, therefore the Desert of Death may be affirmed concerning an unlawful Wish. And so of the rest.

Note, In the Doctrine of Syllogisms, a singular and an indefinite Proposition are ranked among Universals, as was before observed in the Doctrine

of Propositions.

SECT. II.

Of plain, simple Syllogisms, and their Rules.

THE next Division of Syllogisms is into fingle and compound. This is drawn from the

Nature and Composition of them.

Single Syllogisms are made up of three Propositions: Compound Syllogisms contain more than three Propositions, and may be formed into two or more Syllogisms.

Single Syllogisms, for Distinction Sake, may be divided into * Simple, Complex and Conjunc-

tive.

Those are properly called simple or categorical Syllogisms, which are made up of three plain, single, or categorical Propositions, wherein the middle Term is evidently and regularly joined with one Part of the Question in the major Proposition, and with the other in the minor, whence there follows a plain, single Conclusion; as, every but man Virtue is to be sought with Diligence; Prudence is a human Virtue; therefore Prudence is to be sought diligently.

Note; Tho' the Terms of Propositions may be complex, yet where the Composition of the whole Argument is thus plain, simple and regular, it is properly called a simple Syllogism, since the Complection does not belong to the syllogistic Form

of it.

^{*} As Ideas and Propositions are divided into fingle and compound, and fingle are subdivided into fimple and complex; so there are the same Divisions and Subdivisions apply'd to Syllogisms.

Simple Syllogisms have several Rules belonging to them, which being observed, will generally secure us from false Inferences: But these Rules being sounded on four general Axioms, it is necessary to mention these Axioms beforehand, for the Use of those who will enter into the speculative Reasons of all these Rules.

Axiom 1. Particular Propositions are contained in Universals, and may be infer'd from them; but Universals are not contained in Particulars, nor

can be infer'd from them:

Axiom 2. In all universal Propositions, the Subject is universal: In all particular Propositions, the

Subject is particular.

Axiom 3. In all affirmative Propositions, the Predicate has no greater Extension than the Subject; for its Extension is restrained by the Subject; and therefore it is always to be esteemed as a particular Idea. It is by meer Accident, if it ever be taken universally, and cannot happen but in such universal or singular Propositions as are reciprocal.

Axiom 4. The Predicate of a negative Proposition is always taken universally, for in its whole Extension it is denied of the Subject. If we say no Stone is vegetable, we deny all sorts of Vegeta-

tion concerning Stones.

The Rules of simple, regular Syllogisms are these.

Rule I. The middle Term must not be taken twice particularly, but once at least universally. For ifthe middle Term be taken for two different Parts or Kinds of the same universal Idea, then the Subject of the Conclusion is compared with one of these

these Parts, and the Predicate with another Part, and this will never shew whether that Subject and Predicate agree or disagree: There will then be four distinct Terms in the Syllogism, and the two Parts of the Question will not be compared with the same third Idea; as if I say, some Men are pious, and some Men are Robbers, I can never infer that some Robbers are pious, for the middle. Term Men being taken twice particularly, it is not the same Men who are spoken of in the major and minor Propositions.

Rule II. The Terms in the Conclusion must never be taken more universally than they are in the Premisses. The Reason is derived from the first Axiom, that Generals can never be inferred from Particulars.

Rule III. A negative Conclusion cannot be proved by two affirmative Premisses. For when the two Terms of the Conclusion are united or agree to the middle Term, it does not follow by any Means that they disagree with one another.

Rule IV. If one of the Premisses be negative, the Conclusion must be negative. For if the middle Term be denied of either Part of the Conclusion, it may shew that the Terms of the Conclufion disagree, but it can never shew that they agree.

Rule V. If either of the Premisses be particular, the Conclusion must be particular. This may be proved for the most partfrom the first Axiom.

These two last Rules are sometimes united in this fingle Sentence, The Conclusion always follows the weaker Part of the Premisses. Now Negatives

and

and Particulars are counted inferior to Affirmatives and Universals.

Rule VI. From two negative Premisses nothing can be concluded. For they separate the middle Term both from the Subject and Predicate of the Conclusion, and when two Ideas disagree to a third, we cannot infer that they either agree or

disagree with each other.

Yet where the Negation is a Part of the middle Term, the two Premisses may look like Negatives according to the Words, but one of them is affirmative in Sense; as, What has no Thought cannot reason; but a Worm has no Thought; therefore a Worm cannot reason. The minor Proposition does really affirm the middle Term concerning the Subject (viz.) a Worm is what has no Thought; and thus it is properly in this Syllogism an affirmative Proposition.

Rule VII. From two particular Premisses, nothing can be concluded. This Rule depends chiefly on the first Axiom.

A more laborious and accurate Proof of these Rules, and the Derivation of every Part of them in all possible Cases, from the foregoing Axioms, require so much Time, and are of so little Importance to assist the right Use of Reason, that it is needless to insist longer upon them here. See all this done ingeniously in the Logick call'd, the Art of Thinking, Part iii. Chap. iii, &c.

SECT. III.

Of the Moods and Figures of simple Syllogisms.

C.Imple Syllogisms are adorned and surrounded in the common Books of Logick with a Variety of Inventions about Moods and Figures, wherein by the artificial Contexture of the Letters A, E, I, and O, Men have endeavoured to transform Logick, or the Art of Reasoning, into a sort of Mechanism, and to teach Boys to syllogize, or frame Arguments and refute them, without any real inward Knowledge of the Question. This is almost in the same manner as School-boys have been taught perhaps in their trifling Years to compose Latin Verses; i. e. by certain Tables and Squares, with a Variety of Letters in them, where-in by counting every fixth, seventh, or eighth Letter, certain Latin Words should be framed in the Form of Hexameters or Pentameters; and this may be done by those who know nothing of Latin or of Verses.

I confess some of these logical Subtilties have much more Use than those versifying Tables, and there is much Ingenuity discovered in determining the precise Number of Syllogisms that may be formed in every Figure, and giving the Reasons of them; yet the Light of Nature, a good Judgment, and due Consideration of Things tend more to true Reasoning than all the Trappings of

Moods and Figures.

But lest this Book be charged with too great Defects and Imperfections, it may be proper to give short Hints of that which some Logicians have spent so much Time and Paper upon.

U

All the possible Combinations of three of the Letters A, E, I, O, to make three Propositions amount to fixty four; but fifty four of them are excluded from forming true Syllogisms by the feven Rules in the foregoing Section: The remaining Ten are variously diversified by Figures and Moods into fourteen Syllogisms.

The Figure of a Syllogism is the proper Disposition of the middle Term with the Parts of the

Question.

A Mood is the regular Determination of Propofitions according to their Quantity and Quality, i. e. their universal or particular Affirmation or Negation; which are fignified by certain artificial Words wherein the Consonants are neglected, and these four Vowels, A, E, I, O, are only regarded.

There are generally counted three Figures.

In the first of them the middle Term is the Subject of the major Proposition, and the Predicate of the minor. This contains four Moods (viz.) Barbara, Celarent, Darii, Ferio. And it is the Excellency of this Figure that all forts of Questions or Conclusions may be proved by it, whether A, E, I, or O, i. e. universal or particular, affirmative or negative, as,

Bar- Every wicked Man is truly miserable;

ba- All Tyrants are wicked Men;

ra. Therefore all Tyrants are truly miserable.

Ce- He that's always in Fear is not happy;

la- Covetous Men are always in Fear;

rent. Therefore covetous Men are not happy.

C. II. S. 3. The right Use of Reason. 291

Da- Whatsoever furthers our Salvation is good for us;

ri- Some Afflictions further our Salvation;

i. Therefore some Afflictions are good for us.

Fe- Nothing that must be repented of is truly desirable;

ri- Some Pleasures must be repented of;

o. Therefore there are fome Pleasures which are not truly defirable.

In the fecond Figure the middle Term is the Predicate of both the Premisses; this contains four Moods (viz.) Cefare, Camestres, Festino, Baroro, and it admits only of negative Conclusions; as,

Ce- No Liar is fit to be believed;

sa- Every good Christian is fit to be believed;

re. Therefore no good Christian is a Liar.

The Reader may eafily form Examples of the rest.

The third Figure requires that the middle Term be the Subject of both the Premisses. It has fix Moods (viz.) Darapti, Felapton, Disamis, Datist, Bocardo, Ferison: And it admits only of particular Conclusions; as,

Da- Whosoever loves God shall be saved; rap- All the Lovers of God have their Imperfections;

ti. Therefore some who have Imperfections shall be faved.

I leave the Reader to form Examples of the reft.

> U 2 The

The Moods of these three Figures are comprized in four Latin Verses.

Barbara, Celarent, Darii, Ferio quoque primæ. Cesare, Camestres, Festino, Baroco, secundæ. Tertia Darapti sibi vindicat, atque Felapton, Adjungens Disamis, Datisi, Bocardo, Ferison.

The special Rules of the three Figures are these. In the first Figure the major Proposition must always be universal, and the minor affirmative.

In the fecond Figure also the major must be universal, and one of the Premisses, together with the Conclusion, must be negative.

In the third Figure the minor must be affirma-

tive, and the Conclusion always particular.

There is also a fourth Figure wherein the middle Term is predicated in the major Proposition, and subjected in the minor: But this is a very indirect and oblique manner of concluding, and is never used in the Sciences, nor in human Life, and therefore I call it useless.—Some Logicians will allow it to be nothing else but a meer Inversion of the first Figure; the Moods of it, (viz.) Baralipton, or Barbari, Calentes, Dibatis, Fespamo, Fressom, are not worthy to be explained by one Example.

SECT. IV.

Of Complex Syllogisms.

It is not the meer Use of complex Terms in a Syllogism that gives it this Name, tho' one of the Terms is usually complex; but those are properly called complex Syllogisms, in which the middle Term is not connected with the whole Subject,

C. II. S. 4. The right Use of Reason. 293

Subject, or the whole Predicate in two distinct Propositions, but is intermingled and compared with them by Parts, or in a more consused manner, in different Forms of Speech; as,

The Sun is a fenseless Being;

The Persians worshipped the Sun;

Therefore the Persians worshipped a senseless Be-

ing.

Here the Predicate of the Conclusion is worshipped a fenseles Being, part of which is joined with the middle Term Sun in the major Proposition, and the other Part in the minor.

Tho' this fort of Argument is confess'd to be entangled, or confused, and irregular, if examined by the Rules of simple Syllogisms; yet there is a great Variety of Arguments used in Books of Learning, and in common Life, whose Consequence is strong and evident, and which must be ranked under this Head; as,

- I. Exclusive Propositions will form a complex Argument; as, pious Men are the only Favourites of Heaven; true Christians are Favourites of Heaven; therefore true Christians are pious Men. Or thus, Hypocrites are not pious Men; therefore Hypocrites are no Favourites of Heaven.
- II. Exceptive Propositions will make such complex Syllogisms; as, None but Physicians came to the Consultation; the Nurse is no Physician; therefore the Nurse came not to the Consultation.
- III. Or, Comparative Propositions; as, Know-ledge is better than Riches; Virtue is better than Knowledge; therefore Virtue is better than Riches. Or thus, a Dove will fly a Mile in a Minute; a U 3 Swallow

Swallow flies swifter than a Dove; therefore a Swallow will fly more than a Mile in a Minute.

- IV. Or Inceptive and Desitive Propositions; as, The Fogs vanish as the Sun arises; but the Fogs have not yet begun to vanish; therefore the Sun is not yet risen.
- V. Or Modal Propositions; as, It is necessary that a General understand the Art of War; but Caius does not understand the Art of War; therefore it is necessary Caius should not be a General. Or thus, A total Eclipse of the Sun would cause Darkness at Noon; it is possible that the Moon at that Time may totally eclipse the Sun; therefore it is possible that the Moon may cause Darkness at Noon.

Beside all these, there is a great Number of complex Syllogisms which can hardly be reduced under any particular Titles, because the Forms of human Language are so exceeding various; as,

Christianity requires us to believe what the Apostles wrote; St. Paul is an Apostle; therefore Christianity requires us to believe what St. Paul wrote.

No human Artist can make an Animal; a Fly or a Worm is an Animal; therefore no human Artist

can make a Fly or a Worm.

The Father always lived in London; the Son always lived with the Father; therefore the Son always lived in London.

The Blossom soon follows the full Bud; this Pear-Tree hath many full Buds; therefore it will shortly have many Blossoms.

One Hailstone never fulls alone; but a Hailstone

fell just now; therefore others fell with it.

Thunder seldom comes without Lightning; but it thundered Yesterday; therefore probably it lightned also.

Moses wrote before the Trojan IVar; the first Greek Historians wrote after the Trojan War; therefore the first Greek Historians wrote after

Moses *.

Now the Force of all these Arguments is so evident and conclusive, that the the Form of the Syllogism be never so irregular, yet we are sure the Inferences are just and true; for the Premisses, according to the Reason of Things, do really contain the Conclusion that is deduced from them, which is a never failing Test of true Syllogisms, as shall be shewn hereafter.

The Truth of most of these complex Syllogisms may also be made to appear (if needful) by reducing them either to regular, simple Syllogisms, or to some of the conjunctive Syllogisms, which are described in the next Section. I will give an Instance only in the first, and leave the rest to exercise the Ingenuity of the Reader.

The first Argument may be reduced to a Syl-

logism in Barbara thus,

The Sun is a senseless Being;

What the Persians worshipped is the Sun;

Therefore what the Persians worshipped is a senseles Being. Tho' the conclusive Force of this Argument is evident without this Reduction.

^{*} Perhaps some of these Syllogisms may be reduced to those which I call Connexive afterward; but it is of little Moment to what Species they belong: for it is not any formal Sett of Rules so much as the Evidence and Force of Reason that must determine the Truth or Falshood of all such Syllogisms.

SECT. V.

Of conjunctive Syllogisms.

HOSE are called conjunctive Syllogisms, wherein one of the Premisses, namely the major,
has distinct Parts, which are joined by a Conjunction, or some such Particle of Speech. Most
Times the major or minor, or both, are explicitly compound Propositions: And generally the major
Proposition is made up of two distinct Parts or
Propositions in such a manner, as that by the Assertion of one in the minor, the other is either asferted or denied in the Conclusion: Or by the Denial of one in the minor, the other is either afferted or denied in the Conclusion. It is hardly possible indeed to fit any short Definition to include
all the Kinds of them; but the chief amongst
them are the conditional Syllogism, the disjunctive,
the relative, and the connexive.

I. The conditional or hypothetical Syllogism is whose major or minor, or both, are conditional Propositions; as, If there be a God, the World is governed by Providence; but there is a God; therefore the World is governed by Providence.

These Syllogisms admit two sorts of true Argu-

mentation, where the major is conditional.

When the Antecedent is afferted in the minor, that the Consequent may be afferted in the Conclusion; such is the preceding Example. This is called arguing from the Position of the Antecedent to the Position of the Consequent.

2. When the Consequent is contradicted in the minor Proposition, that the Antecedent may be contradicted in the Conclusion; as, If Atheist

are in the right, then the World exists without a Cause; but the World does not exist without a Cause; therefore Atheists are not in the right. This is called arguing from the removing of the Consequent to the removing of the Antecedent.

To remove the Antecedent or Consequent here does not meerly signify the Denial of it, but the Contradiction of it; for the meer Denial of it by a contrary Proposition will not make a true Syllogism, as appears thus: If every Creature be reasonable, every Brute is reasonable; but no Brute is reasonable; therefore no Creature is reasonable. Whereas if you say in the minor, but every Brute is not reasonable, then it will follow truly in the Conclusion, therefore every Creature is not reasonable.

When the Antecedent or Consequent are negative Propositions, they are removed by an Affirmative; as, If there be no God, then the World does not discover creating Wisdom; but the World does discover creating Wisdom; therefore there is a God. In this Instance the Consequent is removed or contradicted in the minor, that the Antecedent may be contradicted in the Conclusion. So in this Argument of St. Paul, I Cor. xv. If the Dead rise not, Christ died in vain; but Christ did not die in vain; therefore the Dead shall rise.

There are also two sorts of false arguing, (viz.) (1.) From the removing of the Antecedent to the removing of the Consequent; or (2.) From the Position of the Consequent to the Position of the Antecedent. Examples of these are easily framed; as,

(1.) If a Minister were a Prince he must be honoured; But a Minister is not a Prince;

Therefore he must not be bonoured.

(2.) If a Minister were a Prince, he must be honoured; But a Minister must be honoured;

Therefore he is a Prince.

Who sees not the ridiculous Falshood of both these Syllogisms?

- Observ. I. If the Subject of the Antecedent and the Consequent be the same, then the hypothetical Syllogism may be turned into a categorical One; as, If Cæsar be a King, he must be honoured; But Cæsar is a King; therefore, &c. This may be changed thus, Every King must be honoured; but Cæsar is a King; therefore, &c.
- Observ. II. If the major Proposition only be conditional, the Conclusion is categorical: But if the minor or both be conditional, the Conclusion is also conditional; as, The Worshippers of Images are Idolaters; If the Papists worship a Crucifix, they are Worshippers of an Image; therefore if the Papists worship a Crucifix, they are Idolaters. But this fort of Syllogisms should be avoided as much as possible in Disputation, because they greatly embarrass a Cause: Tho' Syllogisms, whose major only is hypothetical, are very frequent, and us'd with great Advantage.
- II. A disjunctive Syllogism is when the major Proposition is disjunctive; as, The Earth moves in a Circle or an Ellipsis; but it does not move in a Circle; therefore it moves in an Ellipsis.

A disjunctive Syllogism may have many Members or Parts thus; it is either Spring, Summer, Autumn, or Winter; but it is not Spring, Autumn, or

Winter; therefore it is Summer.

The true Method of arguing here is from the Affertion of one, to the Denial of the rest, or from the

the Denial of one or more, to the Assertion of what remains: but the major should be so framed, that the several Parts of it can't be true together, tho' one of them is evidently true.

III. A relative Syllogism requires the major Proposition to be relative; as, Where Christ is, there shall his Servants be; but Christ is in Heaven; therefore his Servants shall be there also. Or, As is the Captain, so are his Soldiers; but the Captain is a Coward; therefore his Soldiers are fo too.

Arguments that relate to the Doctrine of Proportion must be referred to this Head; as, As two are to four, so are three to six; but two make the half of four; therefore three make the half

of fix.

Besides these, there is another sort of Syllogism. which is very natural and common, and yet Authors take very little Notice of it, call it by an improper Name, and describe it very desectively, and that is,

IV. A connexive Syllogism. This some have called copulative; but it does by no Means require the major to be a copulative nor a compound Pro position (according to the Definition given of it Part IId, Chap. IId, Sect. 6.) but it requires that two or more Ideas be so connected either in the complex Subject or Predicate of the major, that if one of them be affirmed or denied in the minor, common Sense will naturally shew us what will be the Consequence. It would be very tedious and useless to frame particular Rules about them, as will appear by the following Examples, which are very various, and may yet be farther multiplied.

- (1.) Meekness and Humility always go together; Moses was a Man of Meekness; therefore Moses was also humble. Or we may form this minor, Pharaoh was no humble Man; therefore he was not meek.
- (2.) No Man can serve God and Mammon; the covetous Man serves Mammon; therefore he cannot serve God. Or the minor may run thus, the true Christian serves God; therefore he does not serve Mammon.
- (3.) Genius must join with Study to make a great Man; Florino has Genius but he cannot study; therefore Florino will never be a great Man. Or thus, Quintus studies hard but has no Genius; therefore Quintus will never, &c.

(4.) Gulo can't make a Dinner without Flesh and Fish; there was no Fish to be gotten to Day; there-

fore Gulo this Day cannot make a Dinner.

(5.) London and Paris are in different Latitudes; the Latitude of London is $\int 1^{\frac{\pi}{2}} Deg$, therefore this cannot be the Latitude of Paris.

(6.) Joseph and Benjamin had one Mother; Rachel was the Mother of Joseph; therefore she

was Benjamin's Mother too.

(7.) The Father and the Son are of equal Stature; The Father is fix Foot high; therefore the Son is fix

Foot high also.

(8.) Pride is inconfistent with Innocence; Angels have Innocence; therefore they have no Pride. Or thus; Devils have Pride; therefore they have not Innocence.

I might multiply other Instances of these connexive Syllogisms, by bringing in all sorts of exceptive, exclusive, comparative, and modal Propositions into the Composition of them; for all these may be wrought into conjunctive, as well as into simple Syllogisms, and thereby we may render them

them complex. But it would waste Time and Paper without equal Profit.

Concerning these various Kinds of conjunctive

Syllogisms, take these two Observations.

Observ. I. Most of them may be transformed into categorical Syllogisms by those who have a Mind to prove the Truth of them that Way; or they may be easily converted into each other by changing the Forms of Speech.

Observ. II. These conjunctive Syllogisms are seldom deficient or faulty in the Form of them; for such a Desicience would be discovered at first Glance generally by common Reason, without any artificial Rules of Logick: The chief Care therefore is to see that the major Proposition be true, upon which the whole Force of the Argument usually depends.

SECT. VI.

Of compound Syllogisms.

WE properly call those compound Syllogisms which are made up of two or more single Syllogisms, and may be resolved into them. The chief kinds are these, Epichirema, Dilemma, Prosyllogismus, and Sorites.

I. Epichirema is a Syllogism which contains the Proof of the major or minor, or both, before it draws the Conclusion. This is often used in Writing, in publick Speeches, and in common Conversation, that so each Part of the Discourse may be confirmed and put out of Doubt, as it moves

on toward the Conclusion, which was chiefly defigned. Take this Instance,

Sickness may be good for us; for it weans us from the Pleasures of Life, and makes us think of dy-

ing;

But we are uneasy under Sickness, which appears by our Impatience, Complaints, Groanings, &c.

Therefore we are uneasy sometimes under that

which is good for us.

Another Instance you may see in Cicero's Oration in Desence of Milo, who had slain Clodius. His major Proposition is, that it is lawful for one Man to kill another, who lies in wait to kill him; which he proves from the Custom of Nations, from natural Equity, Examples, &c. his minor is that Clodius laid wait for Milo; which he proves by his Arms, Guards, &c. and then infers the Conclusion, that it was lawful for Milo to kill Clodius.

II. A Dilemma is an Argument which divides the whole into all its Parts or Members by a diffunctive Proposition, and then infers something concerning each Part which is finally inferr'd concerning the whole. Instances of this are frequent; as, In this Life we must either obey our vicious Inclinations or resist them: To obey them will bring Sin and Sorrow, to resist them is laborious and painful: Therefore we cannot be perfectly free from Sorrow or Pain in this Life.

A Dilemma becomes faulty or ineffectual three Ways: First, when the Members of the Division are not well oppos'd, or not fully enumerated; for then the major is false. Secondly, When what is afferted concerning each part is not just; for then the minor is not true. Thirdly, When it may be

retorted

C.II.S. 6. The right Use of Reason. 303 retorted with equal Force upon him who utters it.

There was a famous ancient Instance of this Case wherein a Dilemma was retorted. Euathlus promised Protagoras a Reward when he had taught him the Art of Pleading, and it was to be paid the first Day that he gain'd any Cause in the Court. After a confiderable time Protagoras goes to Law with Euathlus for the Reward, and uses this Dilemma; Either the Cause will go on my Side or on yours: If the Cause goes on my Side, you must pay me according to the Sentence of the Judge: If the Cause goes on your Side, you must pay me according to your Bargain: Therefore whether the Cause goes for me or against me you must pay me the Reward. But Evathlus retorted this Dilemma thus; Either I shall gain the Cause or lose it: If I gain the Cause, then nothing will be due to you according to the Sentence of the Judge: But if I lose the Cause, nothing will be due to you according to my Bargain: Therefore whether I lose or gain the Cause I will not pay you, for nothing will be due to you.

Note 1st, A Dilemma is usually described as the it always proved the Absurdity, Inconvenience, or Unreasonableness of some Opinion or Practice; and this is the most common Design of it; but it is plain, that it may also be used to prove the Truth or Advantage of any thing proposed; as, In Heaven we shall either have Desires or not: If we have no Desires, then we have full Satisfaction; if we have Desires, they shall be satisfied as fast as they arise; therefore in Heaven we shall be compleatly

satisfied.

Note 2^d, This fort of Argument may be composed of three or more Members, and may be called a *Trilemma*.

- III. A Profyllogism is when two or more Syllogisms are so connected together, that the Conclusion of the former is the major or the minor of the following; as, Blood can't think; but the Soul of Man thinks; therefore the Soul of Man is not Blood; but the Soul of a Brute is his Blood according to the Scripture; therefore the Soul of Man is different from the Soul of a Brute. See another Instance in the Introduction to this Treatise, p. 5.
- IV. A Sorites is when several middle Terms are chosen to connect one another successively in several Propositions, till the last Proposition connects its Predicate with the first Subject. Thus, All Men of Revenge have their Souls often uneasy; uneasy Souls are a Plague to themselves; now to be ones own Plague is Folly in the Extreme; therefore all Men of Revenge are extreme Fools.

The Apostle, Rom. viii. 29. gives us an Instance of this sort of Argument if it were reduced to exact Form: Whom he foreknew those he predestinated; whom he predestinated he called; whom he called he justified; whom he justified he glorified; there-

fore whom he foreknew he glorified.

To these Syllogisms it may not be improper to add Industion, which is, when from several particular Propositions we infer one general; as, The Dostrine of the Socinians cannot be proved from the Gospels, it cannot be proved from the Asts of the Apostles, it cannot be proved from the Epistles, nor the Book of Revelations; therefore it cannot be proved from the New Testament.

Note, This fort of Argument is often defective, because there is not due Care taken to enumerate all the Particulars on which the Conclusion should de-

pend.

All these four Kinds of Syllogisms in this Section may be called Redundant, because they have more than three Propositions. But there is one fort of Syllogism which is defective, and is called an Enthymem, because only the Conclusion with one of the Premisses is exprest, while the other is supposed and referved in the Mind: Thus, There is no true Religion without good Morals; therefore a Knave cannot be truly religious: Or thus, It is our Duty to love our Neighbours as our selves; therefore there are but few who perform their Duty.

Note, This is the most common soft of Argument amongst Mankind both in Writing and in Speaking; for it would take up too much Time, and too much retard the Discourse to draw out all our Arguments in Mood and Figure. Besides, Mankind love to have so much Compliment paid to their Understandings as to suppose that they know the Major or Minor, which is suppressed and implied, when you pronounce the other Premise and

the Conclusion.

If there be any Debate about this Argument, the Syllogism must be compleated in order to try its Force and Goodness by adding the absent Proposition.

SECT. VII.

Of the middle Terms, of common Places or Topics, and Invention of Arguments.

THE next Division of Syllogisms is according to the middle Term, which is made use of in the Proof of any Proposition. Now the middle Term (as we have hinted before) is often called the Argument, because the Force of the Syllogism depends upon it: We must make a little Delay here to to treat briefly of the Doctrine of Topics, or Places whence middle Terms or Arguments are drawn.

All Arts and Sciences have some general Subjects which belong to them, which are called Topics, or common Places; because middle Terms are borrowed, and Arguments derived from them for the Proof of the various Propositions which we have occasion to discourse of. The Topics of Grammar are Etymology, Noun, Verb, Construction, Signification, &c. The Topics of Logic are Genus, Species, Difference, Property, Definition, Division, &c. The Topics of Ontology or Metaphysics are Cause, Effect, Action, Passion, Identity, Opposition, Subject, Adjunct, Sign, &c. The Topics of Morality or Ethics are Law, Sin, Duty, Authority, Freedom of Will, Command, Threatning, Reward, Punishment, &c. The Topics of Theology are God, Christ, Faith, Hope, Worship, Salvation, &c.

To these several Topics there belong particular Observations, Axioms, Canons or Rules †, which

are laid down in their proper Sciences; as,

Grammar hath such Canons (viz.) Words in a different Construction obtain a different Sense. Words derived from the same Primitive may probably have

some Affinity in their original Meaning, &c.

Canons in Logic are such as these, Every Part of a Division singly taken must contain less than the Whole. A Definition must be peculiar and proper to the Thing defin'd. Whatever is affirmed or denied of the Genus, may be affirmed or denied of the Species, &c.

Metaphysical Canons are such as these; final Caufes belong unly to intelligent Agents. If a natural and necessary Cause operate, the Effect will follow,

[†] A Canon is a Proposition declaring some Property of the Subject, which is not express in the Definition or Division of it.

&c. and there are large Catalogues of many more in each distinct Science.

Now it has been the Custom of those who teach Logic or Rhetoric to direct their Disciples, when they want an Argument, to confult the feveral Topics which are fuited to their Subject of Discourse, and to rummage over the Definitions, Divisions and Canons that belong to each Topick. This is called the Invention of an Argument; and it is taught with much Solemnity in fome Schoo's.

I grant there may be good Use of this Practice for Persons of a lower Genius, when they are to compose any Discourse for the Publick; or for those of superior Parts to refresh their Memory, and revive their Acquaintance with a Subject which has been long absent from their Thoughts; or when their natural Spirits labour under Indispofition and Languor: But when a Man of moderate Sagacity has made himself Master of his Theme by just Diligence and Enquiry, he has seldom need to run knocking at the Doors of all the Topics that he may furnish himself with Argument or Matter of Ipeaking: And indeed it is only a Man of Sense and Judgment that can use common Places or Topics well; for amongst this Variety he only knows what is fit to be left out, as well as what is fit to be spoken.

. By some logical Writers this Business of Topics and Invention is treated of in fuch a manner with mathematical Figures and Diagrams, fill'd with the barbarous technical Words, Napcas, Nipcis, Ropcos, Nofrop, &c. as the an ignorant Lad were to be led mechanically in certain artificial Harnefses and Trammels to find out Arguments to prove or refute any Proposition whatsoever, without any rational Knowledge of the Ideas. Now there is no Need to throw Words of Contempt on such

a Practice; the very Description of it carries Reproof and Ridicule in Abundance.

SECT. VIII.

Of several Kinds of Arguments and Demonstrations.

WE proceed now to the Division of Syllogisms according to the middle Term; and in this Part of our Treatise the Syllogisms themselves are properly called Arguments, and are thus distributed.

I. Arguments are called Grammatical, Logical, Metaphysical, Physical, Moral, Mechanical, Theological, &c. according to the Art, Science, or Subject whence the middle Term or Topic is borrowed. Thus if we prove that no Man should steal from his Neighbour because the Scripture forbids it, this is a theological Argument: If we prove it from the Laws of the Land, it is political; but if we prove it from the Principles of Reason and Equity, the Argument is moral.

II. Arguments are either certain and evident, or

doubtful and meerly probable.

Probable Arguments are those whose Conclusions are proved by some probable Medium; as, This Hill was once a Church-Yard, or a Field of Battle, because there are many human Bones found here. This is not a certain Argument, for human Bones might have been conveyed there some other Way.

Evident and certain Arguments are called Demonstrations; for they prove their Conclusions by clear Mediums and undoubted Principles; and they

are generally divided into these two forts.

1. Demon-

1. Demonstrations a Priori, which prove the Effect by its necessary Cause; as, I prove the Scripture is infallibly true, because it is the Word of God, who cannot lye.

2. Demonstrations a Posteriori, which infer the Cause from its necessary Effect; as, I infer there hath been the Hand of some Artificer here, because I find a curious Engine. Or, I infer there is a God, from the Works of his Wisdom in the visible World.

The last of these is called Demonstratio TS oTI, because it proves only the Existence of a Thing; the first is named Demonstratio TE Nioti, because

it shews also the Cause of its Existence.

But Note, That tho' these two forts of Arguments are most peculiarly called Demonstrations, yet generally any strong and convincing Argument obtains that Name; and it is the Custom of Mathematicians to call all their Arguments Demonstrations, from what Medium soever they derive them.

III. Arguments are divided into artificial and inartificial.

An artificial Argument is taken from the Nature and Circumstances of the Things; and if the Argument be strong it produces a natural Certainty, as; The World was first created by God, because nothing can create itself.

An inartificial Argument is the Testimony of another, and this is called original, when our Information proceeds immediately from the Persons concerned, or from Eye or Ear-Witnesses of a Fact: it is called Tradition when it is delivered by

the Report of others.

We have taken Notice before, that Testimony is either divine or human. If the human Tcstimony be strong, it produces a moral Certainty;

bug

but divine Testimony produces a supernatural Cer-

tainty which is far superior.

Note; Arguments taken from human Testimony, as well as from Laws and Rules of Equity, are called moral; and indeed the same Name is also applied to every fort of Argument which is drawn from the free Actions of God, or the contingent Actions of Men, wherein we cannot arise to a natural Certainty, but content our selves with an high Degree of Probability, which in many Cases is scarce inferior to natural Certainty.

IV. Arguments are either direct or indirect. It is a direct Argument where the middle Term is such as proves the Question itself, and infers that very Proposition which was the Matter of Enquiry. An indirect or oblique Argument proves or results some other Proposition, and thereby makes the Thing enquired appear to be true by plain

Consequence.

Several Arguments are called indirect; as, (1.) When some contradictory Proposition is proved to be salse, improbable, or impossible: Or when upon Supposition of the Falshood or Denial of the original Proposition, some Absurdity is inferred. This is called a Proof per impossible, or a Reductio ad absurdum. (2.) When some other Proposition is proved to be true which is less probable, and thence it follows that the original Proposition is true, because it is more probable. This is an Argument ex magis probabili ad minus. (3.) When any other Proposition is proved upon which it was before agreed to yield the original Question. This is an Argument ex Concesso.

V. There is yet another Rank of Arguments which have Latin Names; their true Distinction

is derived from the Topics or middle Terms which are used in them, tho' they are called an Address to our Judgment, our Faith, our Ignorance, our Profession, our Modesty, and our Passions.

1. If an Argument be taken from the Nature or Existence of Things, and addrest to the Reason of Mankind, it is called Argumentum ad Judi-

cium.

2. When it is borrowed from some convincing Testimony, it is Argumentum ad Fidem, an Address to our Faith.

3. When it is drawn from any insufficient Medium whatsoever, and yet the Opposer has not Skill to resute or answer it, this is Argumentum

ad Ignorantiam, an Address to our Ignorance.

4. When it is built upon the profest Principles or Opinions of the Person with whom we argue, whether these Opinions be true or false, it is named Argumentum ad Hominem, an Address to our profest Principles. St. Paul often uses this Argument when he reasons with the Jews, and when he fays, I speak as a Man.

5. When the Argument is fetch'd from the Sentiments of some wise, great, or good Men, whose Authority we reverence, and hardly dare oppose, it is called Argumentum ad Verecundiam,

an Address to our Modesty.

6. I add finally, when an Argument is borrowed from any Topics which are fuited to engage the Inclinations and Passions of the Hearers on the Side of the Speaker, rather than to convince the Judgment, this is Argumentum ad Passiones, an Address to the Passions; or if it be made publickly, it is called ad Populum, or an Appeal to the People.

After all these Divisions of Syllogism or Argument arising from the middle Term, there is one Distinction proper to be mentioned which arises from the Premisses. An Argument is called uniform when both the Premisses are derived from the same Springs of Knowledge, whether it be Sense, Reason, Consciousness, human Faith, or divine Faith: But when the two Premisses are derived from different Springs of Knowledge, it is called a mixt Argument.

Whether the Conclusion must be called *Human* or *Divine*, when one or both Premisses are *Divine*, but the Conclusion is drawn by *human Reason*, I leave to be disputed and determined in the *Schools*

of Theology.

Thus the second Chapter is finished, and a particular Account given of all the chief Kinds of Syllogisms or Arguments which are made use of among Men, or treated of in Logic, together with special Rules for the Formation of them, as far as

is necessary.

If a Syllogism agree with the Rules which are given for the Construction and Regulation of it, it is called a true Argument: If it disagree with these Rules, it is a Paralogism, or false Argument: But when a false Argument puts on the Face and Appearance of a true one, then it is properly called a Sophism or Fallacy, which shall be the Subject of the next Chapter.

CHAP. III.

The Doctrine of Sophisms.

ROM Truth nothing can really follow but what is true: Whensoever therefore we find a false Conclusion drawn from Premisses which seem to be true, there must be some Fault in the Deduction or Inference; or else one of the Premisses is not true in the Sense in which it is used in that Argument.

When an Argument carries the Face of Truth with it, and yet leads us into Mistake, it is a Sophism; and there is some Need of a particular Description, of these fallacious Arguments, that we may with more Ease and Readiness detect and

folve them.

SECT. I.

Of several Kinds of Sophisms, and their Solution.

A Sthe Rules of right Judgment and of good Ratiocination often coincide with each other, fo the Doctrine of Prejudices, which was treated of in the fecond Part of Logic, has anticipated a great deal of what might be faid on the Subject of Sophisms; yet I shall mention the most remarkable Springs of false Argumentation, which are reduced by Logicians to some of the following Heads.

I. The first fort of Sophism is called Ignoratio Elenchi, or a Mistake of the Question; that is, when something else is proved which has neither any necessary Connection or Inconsistency with the Thing enquired, and consequently gives no Determination to the Enquiry, tho' it may feem at first Sight to determine the Question; as, if any should conclude that St. Paul was not a native Jew, by proving that he was born a Roman; or if they should pretend to determine that he was neither Roman, nor Jew, by proving that he was born at Tarsus in Cilicia: These Sophisms are refuted by shewing that all these three may be true; for he was born of Jewish Parents in the City of Tarfus, and by some peculiar Privilege granted to his Parents, or his native City, he was born a Denizon of Rome. Thus there is neither of these three Characters of the Apostle inconfiftent with each other, and therefore the proving one of them true does not refute the others.

Or if the Question be proposed, Whether Excess of Wine can be burtful to him that drinks it, and the Sophister should prove that it revives his Spirits, it exhilarates his Soul, it gives a Man Courage, and makes him strong and active, and then he takes it for granted that he has proved his Point. But the Respondent may casily shew that the Wine may do all this, yet it may be finally burtful both to the Soul and Body of him that drinks it

to Excess.

Disputers when they grow warm are ready to run into this Fallacy: They dress up the Opinion of their Adversary as they please, and ascribe Sentiments to him which he doth not acknowledge; and when they have with a great deal of Pomp attack'd and consounded these Images of Straw of

of their own making, they triumph over their Adversary as tho' they had utterly confuted his

Opinion.

It is a Fallacy of the same kind which a Disputant is guilty of when he finds that his Adversary is too hard for him, and that he cannot fairly prove the Question first propos'd; he then with Slyness and Subtilty turns the Discourse aside to some other kindred Point which he can prove, and exults in that new Argument wherein his Opponent never contradicted him.

The Way to prevent this Fallacy is by keeping the Eye fixt on the precise Point of Dispute, and neither wandering from it ourselves, nor suffering our Antagonist to wander from it, or substitute

anything else in its Room.

II. The next Sophism is called Petitio Principii, or a Supposition of what is not granted; that is, when any Proposition is proved by the same Proposition in other Words, or by something that is equally uncertain and disputed: As if any one undertake to prove that the human Soul is extended thro' all the Parts of the Body, because it resides in every Member, which is but the same Thing in other Words. Or if a Papist should pretend to prove that his Religion is the only Catholick Religion, and is derived from Christ and his Apostles, because it agrees with the Doctrine of all the Fathers of the Church, all the holy Martyrs, and all the Christian World throughout all Ages: Whereas this is a great Point in Contest, whether their Religion does agree with that of all the Antients, and the primitive Christians or no.

III. That fort of Fallacy which is called a Circle is very near akin to the Petitio Principii; as, when when one of the Premisses in a Syllogism is questioned and opposed, and we pretend to prove it by the Conclusion: Or, when in a Train of Syllogisms we prove the last by recurring to what was the Conclusion of the first. The Papists are samous at this fort of Fallacy, when they prove the Scripture to be the Word of God by the Authority or infallible Testimony of their Church; and when they are called to shew the infallible Authority of their Church, they pretend to prove it by the Scripture.

IV. The next kind of Sophism is called non Causa pro Causa, or the Assignation of a salse Cause. This the peripatetic Philosophers were guilty of continually, when they told us that certain Beings, which they called substantial Forms, were the Springs of Colour, Motion, Vegetation, and the various Operations of natural Beings in the animate and inanimate World; when they informed us that Nature was terribly asraid of a Vacuum, and that this was the Cause why the Water would not fall out of a long Tube if it was turned upside down: The Moderns as well as the Antients sall often into this Fallacy when they positively assign the Reasons of natural Appearances, without sufficient Experiments to prove them.

Astrologers are overrun with this fort of Fallacies, and they cheat the People grosly by pretending to tell Fortunes, and to deduce the Cause of the various Occurrences in the Lives of Men, from the various Positions of the Stars and Planette which they call Astronomy

nets, which they call Aspetts.

When Comets and Eclipses of the Sun and Moon are construed to signify the Fate of Princes, the Revolution of States, Famine, Wars and Calamities

lamities of all kinds, it is a Fallacy that belongs

to this Rank of Sophisms.

There is scarce any thing more common in human Life than this sort of deceitful Argument. If any two accidental Events happen to concur, one is presently made the Cause of the other. If Titius wronged his Neighbour of a Guinea, and in six Months after he fell down and broke his Leg, weak Men will impute it to the divine Vengeance on Titius for his former Injustice. This Sophism was found also in the early Days of the World: For when holy Job was surrounded with uncommon Miseries, his own Friends inferred, that he was a most heinous Criminal, and charged him with aggravated Guilt as the Cause of his Calamities; the God himself by a Voice from Heaven solved this uncharitable Sophism, and cleared his Servant Job of that Charge.

How frequent is it among Men to impute Crimes to wrong Perfons? We too often charge that upon the wicked Contrivance and premeditated Malice of a Neighbour, which arose merely from Ignorance, or from unguarded Temper. And on the other hand, when we have a Mind to excuse ourselves, we practise the same Sophism, and charge that upon our Inadvertence or our Ignorance, which perhaps was design'd Wickedness. What is really done by a Necessity of Circumstances, we sometimes impute to Choice: And again, we charge that upon Necessity, which was

really defired and chosen.

Sometimes a Person acts out of Judgment in Opposition to his Inclination; another Person perhaps acts the same Thing out of Inclination, and against his Judgment. 'Tis hard for us to determine with Assurance what are the inward

Springs

Springs and fecret Causes of every Man's Conduct; and therefore we should be cautious and flow in passing a Judgment, where the Case is not exceeding evident: And if we should mistake, let it rather be on the charitable than on the cenforious Side.

'Tis the same Sophism that charges mathematical Learning with leading the Minds of Men to Scepticism and Infidelity, and as unjustly accuses the new Philosophy of paving the Way to Heresy and Schism. Thus the Reformation from Popery has been charged with the Murder and Blood of Millions, which in Truth is to be imputed to the Tyranny of the Princes and the Priests, who would not suffer the People to reform their Sentiments and their Practices according to the Word of God. Thus Christianity in the primitive Ages was charged by the Heathens with all the Calamities which befel the Roman Empire, because the Christians renounced the Heathen Gods and Idols.

The Way to relieve ourselves from these Sophisms, and to secure ourselves from the Danger of falling into them, is an honest and diligent Enquiry into the real Nature and Causes of Things, with a constant Watchfulness against all those Prejudices that might warp the Judgment afide from Truth in that Enquiry.

V. The next is called fallacia Accidentis, or a Sophism wherein we pronounce concerning the Nature and essential Properties of any Subject, according to something which is merely accidental to it. This is akin to the former, and is also ver ry frequent in human Life. So if Opium or the Peruvian Bark has been used imprudently or unfuccessfully,

fuccessfully, whereby the Patient has received Injury, some weaker People absolutely pronounce against the Use of the Bark or Opium upon all Occasions whatsoever, and are ready to call them Poison. So Wine has been the accidental Occafion of Drunkenness and Quarrels; Learning and Printing may have been the accidental Cause of Sedition in a State; the Reading of the Bible by Accident hath been abused to promote Heresies or destructive Errors; and for these Reasons they have been all pronounced evil Things. Mahomet forbad his Followers the Use of Wine; the Turks discourage Learning in their Dominions; and the Papists forbid the Scripture to be read by the Laity. But how very unreasonable are these Inferences, and these Prohibitions which are built upon them!

VI. The next Sophism borders upon the former; and that is when we argue from that which is true in particular Circumstances to prove the same thing true absolutely, simply, and abstracted from all Circumstances; this is called in the Schools a Sophism à dicto secundum quid ad dictum simpliciter; as, That which is bought in the Shambles is eaten for Dinner; raw Meat is bought in the Shambles; therefore raw Meat is eaten for Dinner. Or thus, Livy writes Fables and Improbabilities when he describes Prodigies and Omens; therefore Livy's Roman History is never to be believed in any thing. Or thus, There may be some Mistake of Transcribers in some Part of Scripture; therefore Scripture alone is not a safe Guide for our Faith.

This fort of Sophism has its Reverse also; as, when we argue from that which is true simply and absolutely to prove the same thing true in all particular Circumstances what soever *; as, if a Traytor should argue from the fixth Commandment, Thou shalt not kill a Man, to prove that he himself ought not to be hanged: Or if a mad Man should tell me, I ought not to withold his Sword from him, because no Man ought to withold the Property of another.

These two last Species of Sophisms are easily solved by shewing the Difference betwixt Things in their absolute Nature, and the same Things surrounded with peculiar Circumstances, and considered in Regard to special Times, Places, Persons and Occasions; or by shewing the Difference between a moral and a metaphysical Universality, and that the Proposition will hold good in one Case but not in the other.

VII. The Sophisms of Composition and Division come next to be mentioned.

The Sophism of Composition is when we infer any thing concerning Ideas in a compounded Sense, which is only true in a divided Sense. As when it is said in the Gospel that Christ made the Blind to see, and the Deaf to hear, and the Lame to walk, we ought not to infer hence that Christ performed Contradictions; but those who were blind before were made to see, and those who were deaf before were made to hear, &c. So when the Scripture assures us the worst of Sinners may be saved, it signifies only that they who have been the worst of Sinners may repent and be saved, not that they shall be saved in their Sins. Or if any one should argue thus, Two and three are even and odd; five

^{*} This is arguing from a moral Universality which admits of some Exceptions, in the same manner as may be argued from metaphysical or a natural Universality, which admits of no Exceptions.

C. III. S. 1. The right Use of Reason. 321

are two and three; therefore five are even and odd. Here that is very falfly inferred concerning two and three in Union, which is only true of them divided.

The Sophism of Division is when we infer the same Thing concerning Ideas in a divided Sense, which is only true in a compounded Sense; as, if we should pretend to prove that every Soldier in the Grecian Army put an hundred thousand Persians to Flight, because the Grecian Soldiers did so. Or if a Man should argue thus; five is one Number; two and three are five; therefore two and three are one Number.

This fort of Sophisins is committed when the Word All is taken in a collective and a distributive Sense, without a due Distinction; as, if any one should reason thus; All the musical Instruments of the Jewish Temple made a noble Consort: The Harp was a musical Instrument of the Jewish Temple;

therefore the Harp made a noble Confort.

It is the same Fallacy when the universal Word All or No refers to Species in one Proposition, and to Individuals in another; as, All Animals were in Noah's Ark; therefore no Animals perished in the Flood: Whereas in the Premise all Animals signifies every kind of Animals, which does not exclude or deny the drowning of a thousand Individuals.

VIII. The last fort of Sophisms arises from our Abuse of the Ambiguity of Words, which is the largest and most extensive kind of Fallacy; and indeed several of the former Fallacies might be reduced to this Head.

When the Words or Phrases are plainly equivoral, they are called Sophisms of Equivocation; as, if we should argue thus, He that sends forth a Book

Book into the Light, desires it to be read; He that, throws a Book into the Fire, sends it into the Light; therefore, he that throws a Book into the Fire de-

sires it to be read.

This Sophism, as well as the foregoing, and all of the like Nature are solved by shewing the different Senses of the Words, Terms or Phrases. Here Light in the major Proposition signifies the publick View of the World; in the minor it signifies the Brightness of Flame or Fire, and therefore the Syllogism has four Terms, or rather it has no middle Terms, and proves nothing.

But where such gross Equivocations and Ambiguities appear in Arguments, there is little Danger of imposing upon ourselves or others. The greatest Danger, and which we are perpetually exposed to in Reasoning, is, where the two Senses or Significations of one Term are near akin, and not plainly distinguished, and yet they are really sufficiently different in their Sense to lead us into great Mistakes, if we are not watchful. And indeed the greatest Part of Controversies in the sacred or civil Life arise from the different Senses that are put upon Words, and the different Ideas which are included in them; as has been shewn at large in the first Part of Logick, Chap. IV. which treats of Words and Terms.

There is after all these, another fort of Sophism which is wont to be called an impersect Enumeration, or a salse Induction, when from a sew Experiments or Observations Men infer general Theorems and universal Propositions. But this is sufficiently noticed in the foregoing Chapter, where we treated of that sort of Syllogism

which is called Induction.

SECT. II.

Two general Tests of true Syllogisms, and Methods of solving all Sophisms.

B Esides the special Description of true Syllogisms and Sophisms already given, and the Rules by which the one are framed, and the other refuted, there are these two general Methods of reducing all Syllogisms whatsoever to a Test of their Truth or Falthood.

I. The first is that the Premisses must (at least implicitly) contain the Conclusion; or thus, One of the Premisses must contain the Conclusion, and the other must shew that the Conclusion is contained in it. The Reason of this Rule is this; When any Proposition is offered to be proved; it is neceffary to find another Proposition which confirms it, which may be called the containing Proposition; but because the second must not contain the first in an express manner, and in the same Words *, therefore it is necessary that a third or oftensive Proposition be found out to shew that the second Proposition contains the first which was to be proved. Let us make an Experiment of this Syllogism. Whosoever is a Slave to his natural Inclinations is miserable; the wicked Man is a Slave to his natural Inclinations; therefore the wicked Man is miserable. Here it is evident that the major Proposition contains the Conclusion;

for

^{*} It is confess'd that conditional and disjunctive Propositions do expressy contain all that is in the Conclusion; but then it is not in a certain and conclusive Manner, but only in a dubious Form of Speech, and mingled with other Terms, and therefore it is not the same express Proposition.

for under the general Character of a Slave to natural Inclinations; a wicked Man is contained or included; and the minor Proposition declares it; whence the Conclusion is evidently deduced that the wicked Man is miserable.

In many affirmative Syllogisms we may suppose either the major or the minor to contain the Conclusion, and the other to shew it; for there is no great Difference: But in negative Syllogisms it is the negative Proposition that contains the Conclusion, and the affirmative Proposition shews it; as, every wife Man masters his Passions; no angry Man masters his Passions; therefore no angry Man is wife. Here it is more natural to suppose the minor to be the containing Proposition; it is the minor implicitly denies Wisdom concerning an angry Man, because mastering the Passions is included in Wisdom, and the major shews it.

Note, This Rule may be applied to complex and conjunctive, as well as fimple Syllogisms, and is adapted to shew the Truth or Falshood of any of them.

II. The fecond is this; As the Terms in every Syllogism are usually repeated twice, so they must be taken precisely in the same Sense in both Places: For the greatest Part of Mistakes, that arise in forming Syllogisms, is derived from some little Difference in the Sense of one of the Terms in the two Parts of the Syllogism wherein it is used. Let us consider the following Sophisms.

Man; therefore it is a Sin to kill a Murderer is a Man; therefore it is a Sin to kill a Murderer. Here the Word Kill in the first Proposition signifies to kill unjustly, or without a Law; in the Conclusion it is taken absolutely for putting a

Man to Death in general, and therefore the Inference

is not good.

2. What I am, you are not; but I am a Man; therefore you are not a Man. This is a relative Syllogism: But if it be reduced to a regular categorical Form, it will appear there is Ambiguity in the Terms, thus; What I am, is a Man; you are not what I am; therefore you are not a Man. Here what I am, in the major Proposition, is taken specifically for my Nature; but in the minor Propofition the same Words are taken individually for my Person; therefore the Inference must be false, for the Syllogisin doth not take the Term what I am both Times in the same Sense.

3. He that says you are an Animal, says true; but be that fays you are a Goose, says you are an Animal; therefore he that says you are a Goose, says true. In the major Proposition the Word Animal is the Predicate of an incidental Proposition; which incidental Proposition being affirmative renders the Predicate of it particular, according to Chap. Hd, Sect. 2d, Axiom 3. and consequently the Word Animal there fignifies only buman Animality. the minor Proposition, the Word Animal, for the fame Reason, signifies the Animality of a Goose; thereby it becomes an ambiguous Term, and unfit to build the Conclusion upon. Or if you say, the Word Animal in the Minor is taken for human Animality, then the Minor is evidently false.

It is from this last general Test of Syllogisms that we derive the Custom of the Respondent in anfwering the Arguments of the Opponent, which is to distinguish upon the major or minor Proposition, and declare which Term is used in two Senses, and in what Sense the Proposition may be true,

and in what Sense it is false.

CHAP. IV.

Some general Rules to direct our Reasoning.

OST of the general and special Directions given to form our Judgments aright in the preceding Part of Logic might be rehearfed here; for the Judgments which we pals upon Things are generally built on some secret Reasoning or Argument by which the Proposition is supposed to be proved. But there may be yet some farther Assistances given to our reasoning Powers in their Search after Truth, and an Observation of the following Rules will be of great Importance for that End.

I. Rule. Accustom yourselves to clear and distinct Ideas, to evident Propositions, to strong and convincing Arguments. Converse much with those Friends and those Books and those Parts of Learning where you meet with the greatest Clearness of Thought and Force of Reasoning. The mathematical Sciences, and particularly Arithmetick, Geometry, and Mechanicks abound with these Advantages: And if there were nothing valuable in them for the Uses of human Life, yet the very speculative Parts of this fort of Learning are well worth our Study; for by perpetual Examples they teach us to conceive with Clearness, to connect our Ideas and Propositions in a Train of Dependence, to reason with Strength and Demonstration, and to distinguish between Truth and Falshood. Something of these Sciences should be fludied by every Man who pretends to Learning, and that (as Mr. Locke expresses it) not so much to make

make us Mathematicians, as to make us reasonable Creatures.

We should gain such a Familiarity with Evidence of Perception and Force of Reasoning, and get such a Habit of discerning clear Truths, that the Mind may be soon offended with Obscurity and Consusion: Then we shall (as it were) naturally and with Ease restrain our Minds from rash Judgment, before we attain just Evidence of the Proposition which is offered to us; and we shall with the same Ease, and (as it were) naturally seize and embrace every Truth that is proposed with just Evidence.

This Habit of conceiving clearly, of judging justly, and of reasoning well, is not to be attained merely by the Happiness of Constitution, the Brightness of Genius, the best natural Parts, or the best Collection of logical Precepts. It is Custom and Practice that must form and establish this Habit. We must apply our selves to it till we perform all this readily, and without reslecting on Rules. A coherent Thinker, and a strict Reasoner is not to be made at once by a Set of Rules, any more than a good Painter or Musician may be form'd extempore by an excellent Lecture on Music or Painting. It is of infinite Importance therefore in our younger Years to be taught both the Value and the Practice of conceiving clearly and reasoning right: For when we are grown up to the middle of Life, or past it, it is no Wonder that we should not learn good Reafoning, any more than that an ignorant Clown should not be able to learn fine Language, Dancing, or a courtly Behaviour, when his ruftic Airs have grown up with him till the Age of Forty.

Y 4 For

For want of this Care fome Perfons of Rank and Education dwell all their Days among obscure Ideas; they conceive and judge always in Consustion, they take weak Arguments for Demonstration, they are led away with the Disguises and Shadows of Truth. Now if such Persons happen to have a bright Imagination, a Volubility of Speech, and a Copiousness of Language, they not only impose many Errors upon their own Understandings, but they stamp the Image of their own Mistakes upon their Neighbours also, and spread their Errors abroad.

It is a Matter of just Lamentation and Pity to confider the Weakness of the common Multitude of Mankind in this Respect, how they receive any thing into their Assent upon the most trisling True Reasoning hath very little Share Grounds. in forming their Opinions. They refift the most convincing Arguments by an obstinate Adherence to their Prejudices, and believe the most improbable Things with the greatest Assurance. They talk of the abstrusest Mysteries, and determine upon them with the utmost Confidence, and without just Evidence either from Reason or Revelation. A confused Heap of dark and inconsistent Ideas makes up a good Part of their Knowledge in Matters of Philosophy as well as Religion, having never been taught the Use and Value of clear and just Reasoning.

Yet it must be still confest that there are some Mysteries in Religion, both natural and revealed, as well as some abstructe Points in Philosophy, wherein the Wise as well as the Unwise must be content with obscure Ideas. There are several Things, especially relating to the invisible World, which are unsearchable in our present State, and therefore we must believe what Revelation plainly dic-

tates,

tates, tho' the Ideas may be obscure. Reason it self demands this of us; but we should seek for the brightest Evidence both of Ideas, and of the Connection of them, wheresoever it is attainable.

Hd Rule. Enlarge your general Acquaintance with Things daily, in order to attain a rich Furniture of Topics, or middle Terms, whereby those Propositions which occur may be either proved or disproved; but especially meditate and enquire with great Diligence and Exactness into the Nature, Properties, Circumstances and Relations of the particular Subject about which you judge or argue. Consider its Causes, Effects, Consequences, Adjuncts, Opposites, Signs, &c. so far as is needful to your present Purpose. You should survey a Question round about, and on all Sides, and extend your Views as far as possible, to every Thing that has a Connection with it. This Practice has many Advantages in it; as,

1. It will be a Means to suggest to your Minds proper Topics for Argument about any Propositi-

on that relates to the same Subject.

2. It will enable you with greater Readiness and Justness of Thought to give an Answer to any sudden Question upon that Subject, whether it arises in your own Mind, or to be proposed by others.

3. This will instruct you to give a plainer and speedier Solution of any Difficulties that may attend the Theme of your Discourse, and to resute the Objections of those who have espoused a con-

trary Opinion.

4. By fuch a large Survey of the whole Subject in all its Properties and Relations, you will be better fecured from Inconfiftencies, i. e. from afterting or denying any thing in one Place, which contradicts what you have afferted or denied in another:

other: And to attain these Ends, an Extensiveness of Understanding, and a large Memory are of un-

fpeakable Service.

One would be ready to wonder fometimes how casily great and wise, and learned Men are led into Affertions in some Parts of the same Treatise, which are found to be scarce consistent with what they have afferted in other Places: But the true Reason is the Narrowness of the Mind of Man, that it cannot take in all the innumerable Properties and Relations of one Subject with a fingle View; and therefore whilst they are intent on one particular Part of their Theme, they bend all their Force of Thought to prove or disprove some Proposition that relates to that Part, without a sufficient Attention to the Consequences which may flow from it, and which may unhappily affect another Part of the same Subject, and by this Means they are fometimes led to fay things which are inconfistent. In such a Case the great Dealers in Dispute and Controversy take Pleasure to cast Nonfense and Self-Contradiction on their Antagonist with huge and hateful Reproaches. For my Part, I rather choose to pity human Nature, whose neceffary Narrowness of Understanding exposes us all to some Degrees of this Frailty. But the most extensive Survey possible of our whole Subject is the best Remedy against it. It is our judging and arguing upon a partial View of Things, that expoles us to Mistakes, and pushes us into Absurdities, or at least to the very Borders of them.

IIId Rule. In fearching the Knowledge of Things, always keep the precise Point of the present Question in your Eye. Take heed that you add nothing to it while you are arguing, nor omit any Part of it.

Watch

Watch carefully left any new Ideas slide in to mingle themselves either with the Subject or the Predicate. See that the Question be not altered by the Ambiguity of any Word taken in different Senses; nor let any secret Prejudices of your own, or the sophistical Arts of others, cheat your Understanding by changing the Question, or shuffling in any thing else in its Room.

And for this End it is useful to keep the precise Matter of Enquiry as simple as may be, and disengaged from a Complication of Ideas, which do not necessarily belong to it. By admitting a Complication of Ideas, and taking too many Things at once into one Question, the Mind is sometimes dazzled and bewildered, and the Truth is lost in such a Variety and Consusion of Ideas; whereas by limiting and narrowing the Question, you take a fuller Survey of the whole of it.

By keeping the fingle Point of Enquiry in our conftant View, we shall be secured from sudden, rash, and impertinent Responses and Determinations, which some have obtruded instead of Solutions and solid Answers, before they perfectly knew the Question.

IVth Rule. When you have exactly considered the precise Point of Enquiry, or what is unknown in the Question, then consider what, and how much you know already of this Question, or of the Ideas and Terms of which it is composed. It is by a Comparison of the known and unknown Parts of the Question together, that you find what Reference the Part known hath unto, or what Connection it hath with the Thing that is sought: Those Ideas whereby the known and unknown Parts of the Question are connected, will furnish you with middle Terms

or Arguments whereby the Thing proposed may

be prov'd or disprov'd.

In this Part of your Work, (viz.) Comparing Ideas together, take due Time, and be not too halty to come to a Determination, especially in Points of Importance. Some Men when they see a little Agreement or Disagreement between Ideas, they presume a great deal, and so jump into the Conclusion: This is a short Way to Fancy, Opinion and Conceit, but a most unsafe and uncertain Way to true Knowledge and Wisdom.

Vth Rule. In choosing your middle Terms or Arguments to prove any Question, always take such Topics as are surest, and least fallible, and which carry the greatest Evidence and Strength with them. Be not so solicitous about the Number, as the Weight of your Arguments, especially in proving any Proposition which admits of natural Certainty, or of compleat Demonstration. Many Times we do Injury to a Cause by dwelling upon trisling Arguments. We amuse our Hearers with Uncertainties by multiplying the Number of seeble Reasonings, before we mention those which are more substantial, conclusive and convincing. And too often we yield up our own Assent to mere probable Arguments, where certain Proofs may be obtained.

Yet it must be confest there are many Cases wherein the growing Number of probable Arguments increases the Degree of Probability, and gives a great and sufficient Confirmation to the Truth which is fought; as,

(1.) When we are enquiring the true Sense of any Word or Phrase, we are more confirmed in the Signification of it by finding the same Ex-

preflion

To

pression so used in several Authors, or in several Places of the same Author.

- (2.) When we are fearching out the true Meaning or Opinion of any Writer, or enquiring into any facred Doctrine of Scripture, we come to a furer Determination of the Truth by feveral diftinct Places wherein the fame Thing is exprest, or plainly implied; because it is not so probable that an honest skilful Reader should mistake the Meaning of the Writer in many Places, as he may in one or two.
- (3.) When we would prove the Importance of any scriptural Doctrine or Duty, the Multitude of Texts wherein it is repeated and inculcated upon the Reader, seem naturally to instruct us that it is a Matter of greater Importance, than other Things which are but slightly or singly mentioned in the Bible.
- (4.) In fearching out Matters of Fact in Times past or in distant Places (in which Case moral Evidence is sufficient, and moral Certainty is the utmost which can be attained) here we derive a greater Assurance of the Truth of it by a Number of Persons, or a Multitude of Circumstances concurring to bear Witness to it.

(5.) From many Experiments in natural Philofophy we more fafely infer a general Theorem, than we can from one or two.

(6.) In Matters of present Practice, both sacred and civil, we must content ourselves oftentimes with a mere Preponderation of probable Reasons or Arguments. Where there are several Reasons on each Side, for and against a Thing that is to be done or omitted, a small Argument added to the Heap may justly turn the Balance on one Side, and determine the Judgment, as I have noted in the 2^d Part of Logic.

To conclude; a growing Acquaintance with Matters of Learning, and a daily Improvement of our Understandings in Affairs human and divine, will best teach us to judge and distinguish in what Cases the Number of Arguments adds to their Weight and Force: It is only Experience can fully inform us when we must be determin'd by probable Topics, and when we must seek and expect Demonstrations.

VIth Rule. Prove your Conclusion (as far as possible) by some Propositions that are in themselves more plain, evident, and certain than the Conclusion; or at least such as are more known, and more intelligible to the Person whom you would convince. If we neglect this Rule, we shall endeavour to enlighten that which is obscure by something equally or more obscure, and to confirm that which is doubtful by something equally or more uncertain. Common Sense dictates to all Men, that it is impossible to establish any Truth, and to convince others of it, but by something that is better known to them than that Truth is.

VIIth Rule. Labour in all your Arguings to enlighten the Understanding, as well as to conquer and captivate the Judgment. Argue in such a Manner as may give a natural, distinct, and solid Knowledge of Things to your Hearers, as well as to force their Assent by a mere Proof of the Question. Now to attain this End, the chief Topic or Medium of your Demonstration should be fetch'd, as much as possible, from the Nature of the Thing to be proved, or from those Things which are most naturally connected with it.

Geometricians sometimes break this Rule with-

out Necessity, two Ways, (viz.)

1. When they prove one Proposition only by thewing what Absurdities will follow if the contradictory, Proposition be supposed or admitted! This is called Reductio ad abfurdum to, or, Demonstratio per impossibile; as for Instance, When they prove all the Radii of a Circle to be equal, by supposing one Radius to be longer or shorter than another, and then shewing what absurd Consequences will follow. This, I confess, forces the Asfent, but it does not enlighten the Mind by fhewing the true Reason and Cause why all Radii are equal, which is derived from the very Conftruction of a Circle: For fince a Circle is formed by fixing one Endrof a strait Line in the Centre, and moving the other End round (or, which is all one, by Compasses kept open to a certain Extent) it follows evidently that every Part of the Circumference being thus described must be equally distant from the Centre, and therefore the Radii, which are Lines from the Centre to the Circumference, must all be equal.

2. Geometricians forget this Rule when they heap up many far-fetch'd Lines, Figures and Proportions to prove some plain, simple and obvious Proposition. This is called a Demonstration per aliena & remota, or an Argument from unnatural and remote Mediums: As if in order to prove the Radii of a Circle are all equal, I should make feveral Triangles and Squares about the Circle

⁺ Note, This Rule chiefly refers to the Effablishment of fome Truth, rather than to the Refutation of Error. It is a very common and useful Way of arguing to refute a false Proposition by shewing what evident Falshood or Absurdity will follow from it: For what Proposition soever is really abfurd and falle, does effectually prove that, Principle, to be falle from which it is derived; so that this Way of refuting an Error is not so usually call'd, Reductio ad absurdum.

and then from some Properties and Proportions of Squares and Triangles prove that the Radii of a Circle are equal.

Yet it must be confest that sometimes such Questions happen, that it is hardly possible to prove them by direct Arguments drawn from the Nature of Things, \mathcal{C}_c and then it may not only be lawful, but necessary to use indirect Proofs, and Arguments drawn from remote Mediums, or from the Absurdity of the contradictory Supposition.

Such indirect and remote Arguments may also be sometimes used to confirm a Proposition which has been before proved by Arguments more direct

and immediate.

VIIIth Rule. Tho' Arguments should give Light to the Subject, as well as constrain the Asfent, yet you must learn to distinguish well between an Explication and an Argument; and neither impose upon yourselves, nor suffer yourselves to be impos'd upon by others, by mistaking a mere Illustration for a convincing Reason.

Axioms themselves, or self-evident Propositions may want an Explication or Illustration, tho' they

are not to be proved by Reasoning.

Similitudes and Allusions have oftentimes a very happy Influence to explain some difficult Truth, and to render the Idea of it familiar and easy. Where the Resemblance is just and accurate, the Influence of a Simile may proceed so far as to shew the Possibility of the Thing in Question: But Similitudes must not be taken as a solid Proof of the Truth or Existence of those Things to which they have a Refemblance. A too great Deference paid to Similitudes, or an utter Rejection of them feem to be two Extreams, and ought to be avoided. The late ingenious Mr. Locke, even even in his Enquiries after Truth, makes great Use of Similes for frequent Illustration, and is very happy in the Invention of them, tho' he warns us also lest we mistake them for conclusive Arguments.

Yet let it be noted here, that a Parable or a Similitude used by any Author, may give a sufficient Proof of the true Sense and Meaning of that Author, provided that we draw not this Similitude beyond the Scope and Design for which it was brought; as when our Saviour affirms, Rev. iii. 3. I will come on thee as a Thief, this will plainly prove that he describes the Unexpettedness of his Appearance, tho' it will by no Means be drawn to signify any Injustice in his Design.

IXth Rule. In your whole Course of Reasoning keep your Mind sincerely intent on the Pursuit of Truth; and follow solid Argument wheresoever it leads you. Let not a Party-Spirit, or any Passion or Prejudice whatsoever, stop or avert the Current of your Reasoning in the Quest of true Knowledge.

When you are enquiring therefore into any Subject, maintain a due Regard to the Arguments and Objections on both Sides of a Question: Consider, compare, and balance them well before you determine for one Side. It is a frequent, but a very faulty Practice to hunt after Arguments only to make good one Side of a Question, and entirely to neglect and refuse those which favour the other Side. If we have not given a due Weight to Arguments on both Sides, we do but wilfully misguide our Judgment, and abuse our Reason, by forbidding its Search after Truth. When we essentially on the Influences of Fear, Hope, Honeur, Credit.

Arguments only to support those Opinions, we have neither done our Duty to God or to our selves; and it is a Matter of meer Chance if we stumble upon Truth in our Way to Ease and Preferment. The Power of Reasoning was given us by our Maker for this very End, to pursue Truth; and we abuse one of his richest Gifts, if we basely yield it up to be led astray by any of the meaner Powers of Nature, or the perishing Interests of this Life. Reason itself, if honestly obeyed, will lead us to receive the divine Revelation of the Gospel, where it is duly proposed, and this will shew us the Path of Life everlasting.

THE

Fourth PART

OF

LOGICK.

Of Disposition and Method.

T is not meerly a clear and diffinct Idea, a well-formed Proposition, or a just Argument, that is sufficient to search out and communicate the Knowledge of a Subject. There must be a Variety and Series of them disposed in a due manner in order to attain this End: And therefore it is the Design of the last Part of Logic to teach us the Art of Method. It is that must secure our Thoughts from that Consusion, Darkness, and Mistake which unavoidably attend the Meditations and Discourses even of the brightest Genius who despites the Rules of it.

I. We shall here consider the Nature of Me-

thod, and the several Kinds of it.

2. Lay down the general Rules of Method, with a few Particulars under them.

Zz

CHAP.

CHAP. I.

Of the Nature of Method, and the several Kinds of it, (viz.) Natural and Arbitrary, Synthetic and Analytic.

MEthod, taken in the largest Sense, implies the placing of several Things, or performing several Operations in such an Order as is most convenient to attain some End proposed: And in this Sense it is applied to all the Works of Nature and Art, to all the divine Affairs of Creation and Providence; and to the Artifices, Schemes, Contrivances and Practices of Mankind, whether in natural, civil, or sacred Affairs.

Now this orderly Disposition of Things includes the Ideas of Prior, Posterior, and Simultaneous; of Superior, Inferior, and Equal; of Beginning, End, and Middle, &c. which are described more particularly among the general Affections

of Being in Ontology.

But in Logic Method is usually taken in a more limited Sense, and the Nature of it is thus described: Method is the Disposition of a Variety of Thoughts on any Subject in such Order as may best serve to find out unknown Truths, to explain and consum Truths that are known, or to fix them in the Memory.

It is distributed into two general Kinds (viz.)

Natural and Arbitrary.

Natural Method is that which observes the Order of Nature, and proceeds in such a manner as that the Knowledge of the Things which follow depends in a great Measure on the Things which go before, and this is twofold, (viz.) Synthetic

and Analytic, which are fometimes called Sym-

thesis and Analysis *.

Synthetic Method is that which begins with the Parts +, and leads onward to the Knowledge of the Whole; it begins with the most simple Principles, and general Truths, and proceeds by Degrees to that which is drawn from them, or compounded of them: and therefore it is called the Method of Composition.

Analytic Method takes the whole Compound as it finds it, whether it be a Species or an Individual, and leads us into the Knowledge of it by refolving it into its first Principles or Parts, its generic Nature, and its special Properties; and therefore

it is called the Method of Resolution.

As synthetic Method is generally used in teaching the Sciences after they are invented, fo

* The Word Analysis has three or four Senses, which it may not be improper to take Notice of here.

1. It fignifies the general and particular Heads of a Discourse, with their mutual Connections, both coordinate and subordinate, drawn out by way of Abstract into one or more Tables, which are frequently placed like an Index

at the Beginning or End of a Book.

2. It fignifies the refolving of a Discourse into its various Subjects and Arguments; as when any Writing of the antient Prophets is refolved into the prophetical, historical, doctrinal, and practical Parts of it, it is faid to be analysed in general. When a Sentence is distinguisht into the Nouns, the Verbs, Pronouns, Adverts, and other Particles of Speech which compose it, then it is faid to be analys'd grammatically. When the same Sentence is distinguished into Subject and Predicate, Proposition, Argument, Ad, Object, Canfe, Effect, Adjunct, Opposite, &c. then it is analys'd logically and me'aphysically. This last is what is chiefly meant in the theological Schools, when they speak of analysing a Text of Scripture.

3. Analysis signifies particularly the Science of Algebra, wherein a Queflion being proposed, one or more Letters, as, x, y, z, or Vowels, as, a, e, i, &c. are made use of to fignify the unknown Number, which being intermingled with feveral known Numbers in the Queltion, is at last by the Rules of Art separated or releas'd from that Entanglement, and its particular Value is found out by shewing its Equation, or Equality to some known Num-

4. It fignifies analytical Method, as here explain'd in Logick.

† Note, It is confest that Synthesis often begins with the Genus, and proceeds to the Species and Individuals. But the Genns of generic Nature is then confidered only as a physical or effential Part of the Species, tho' it be sometimes called an universal or logical Whole. Thus synthetic Method maintains its own Description still, for it begins with the Parts, and proceeds to the Whole which is composed of them.

so analytic is most practised in finding out Things unknown. Tho' it must be confest that both Methods are sometimes employed both to find out

Truth, and to communicate it.

If we know the Parts of any Subject easier and better than the Whole, we consider the Parts distinctly, and by putting them together we come to the Knowledge of the Whole. So in Grammar we learn first to know Letters, we join them to make Syllables, out of Syllables we compose Words, and out of Words we make Sentences and Discourses. So the Physician or Apothecary knows the Nature and Powers of his Simples (viz.) his Drugs, his Herbs, his Minerals, &c. and putting them together, and considering their several Virtues, he finds what will be the Nature and Powers of the Bolus, or any compound Medicine: This is the synthetic Method.

But if we are better acquainted with the Whole than we are with particular Parts, then we divide or resolve the Whole into its Parts, and thereby gain a distinct Knowledge of them. So in vulgar Life we learn in the Gross what Plants or Minerals are; and then by Chymistry we gain the Knowledge of Salt, Sulphur, Spirit, Water, Earth, which are the Principles of them. So we are first acquainted with the whole Body of an Animal, and then by Anatomy or Dissection, we come to learn all the inward and outward

Parts of it. This is analytic Method.

According to this most general and obvious I-dea of synthetic and analytic Method, they differ from each other as the Way which leads up from a Valley to a Mountain differs from itself, considered as it leads down from the Mountain to the Valley; or as St. Matthew and St. Luke prove Christ to be the Son of Abraham; Luke finds it out

by Analysis, rising from Christ to his Ancestors; Matthew teaches it in synthetic Method, beginning from Abraham, and shewing that Christ is found among his Posterity. Therefore it is a usual Thing in the Sciences, when we have by Analysis found out a Truth, we use synthetic Method to explain and deliver it, and prove it to be true.

In this easy View of Things, these two kinds of Method may be preserved conspicuously, and entirely distinct: But the Subjects of Knowledge being infinite, and the Ways whereby we arrive at this Knowledge being almost infinitely various, it is very difficult, and almost impossible always to maintain the precise Distinction between these two Methods.

This will evidently appear in the following Ob-

servations.

Obf. I. Analytic Method being used chiefly to find out Things unknown, it is not limited or confined merely to begin with some whole Subject, and proceed to the Knowledge of its Parts, but it takes its Rise sometimes from any single Part or Property, or from any thing whatsoever that belongs to a Subject which happens to be first and most casily known, and thereby enquires into the more abstruse and unknown Parts, Properties, Causes, Effects, and Modes of it, whether absolute or relative; as for Instance,

(1.) Analysis finds out Causes by their Effects. So in the speculative Part of natural Philosophy, when we observe Light, Colours, Motions, Hardness, Softness, and other Properties and Powers of Bodies, or any of the common or uncommon Appearances of Things either on Earth or in Heaven, we search out the Causes of them. So by

Z 4 the

the various Creatures we find out the Creator, and

learn his Wildom, Power and Goodness.

(2.) It finds out Effects by their Causes. So the practical and mechanical Part of natural Philosophy considers such Powers of Motion, as the Wind, the Fire, and the Water, &c. and then contrives what Uses they may be applied to, and what will be their Effects in order to make Mills

and Engines of various Kinds.

(3.) It finds out the general and special Nature of a Thing by considering the various Attributes of the Individuals, and observing what is common, and what is proper, what is accidental and what is essential. So by surveying the Colour, the Shape, Motion, Rest, Place, Solidity, Extension of Bodies, we come to find that the Nature of Body in general is solid Extension; because all other Qualities of Bodies are changeable, but this belongs to all Bodies, and it endures thro' all Changes; and because this is proper to Body alone, and agrees not to any thing else; and it is the Foundation of all other Properties.

(4.) It finds out the remaining Properties or Parts of a Thing, by having some Parts or Properties given. So the Area of a Triangle is found by knowing the Height and the Base. So by having two Sides, and an Angle of a Triangle given, we find the remaining Side and Angles. So when we know Cogitation is the prime Attribute of a Spirit, we infer its Immateriality, and thence

its Immortality.

(5.) Analysis finds the Means necessary to attain a proposed End by having the End first assigned. So in moral, political, accommical Affairs, having proposed the Government of Self, a Family, a Society, or a Nation, in order to their best Interest, we consider and search out what are the pro-

per

per Laws, Rules and Means to effect it. So in the Practices of Artificers, and the Manufactures of various Kinds, the End being proposed, as making Cloth, Houses, Ships, &c. we find out Ways of composing these things for the several Uses of human Life. But the putting any of these Means in Execution to attain the End, is synthetic Method.

Many other Particulars might be represented to shew the various Forms of analytic Method, whereby Truth is found out, and some of them come very near to synthetic, so as hardly to be distin-

guished.

Qbs. II. Not only the Investigation of Truth, but the Communication of it also is often practifed in such a Method, as neither agrees precisely to synthetic or analytic. Some Sciences, if you confider the whole of them in general, are treated in fynthetic Order; so Physicks or natural Philosophy begins usually with an Account of the general Nature and Properties of Matter or Bodies, and by Degrees descends to consider the particular Species of Bodies, with their Powers and Properties; yet it is very evident that when Philosophers come to particular Plants and Animals, then by Chymistry and Anatomy they analyse or resolve those Bodies into their feveral constituent Parts. On the other Hand Logic is begun in analytic Method; the whole is divided into its integral Parts, according to the four Operations of the Mind; yet here and there synthetic Method is used in the particular Branches of it, for it treats of Ideas in general first, and then descends to the several Species of them; it teaches us how Propositions are made up of Ideas, and Syllogisms of Propositions, which is the Order of Composition.

The antient scholastic Writers have taken a great deal of Pains, and engaged in useless Disputes about these two Methods, and after all have not been able to give such an Account of them as to keep them entirely distinct from each other, neither in the Theory or in the Practice. Some of the Moderns have avoided this Confusion in some Measure by confining themselves to describe almost nothing else but the synthetic and analytic Methods of Geometricians and Algebraists, whereby they have too much narrowed the Nature and Rules of Method, as the every thing were to be treated in mathematical Forms.

Upon the whole I conclude, that neither of these two Methods should be too scrupulously and superstitiously pursued, either in the Invention or in the Communication of Knowledge. It is enough if the Order of Nature be but observed in making the Knowledge of Things following depend on the Knowledge of the Things which go before. Oftentimes a mixed Method will be found most effectual for these Purposes; and indeed a wise and judicious Prospect of our main End and Design must regulate all Method what-soever.

Here the Rules of natural Method ought to be proposed, (whether it be analytic, or snixt:) but it is proper first to give some Account of arbitrary Method, lest it be thrust at too great a Distance from the first mention of it.

Arbitrary Method leaves the Order of Nature, and accommodates itself to many Purposes; such as, to treasure up Things, and retain them in Memory; to harangue and persuade Mankind to any Practice in the religious or the civil Life; or to delight, amuse, or entertain the Mind.

As for the Assistance of the Memory, in most Things a natural Order has an happy Influence; for Reason itself deducing one Thing from another, greatly assists the Memory by the natural Connection and mutual Dependence of Things. But there are various other Methods which Mankind have made use of for this Purpose, and indeed there are some Subjects that can hardly be reduced to Analysis or Synthesis.

In reading or writing History, some follow the Order of the Governors of a Nation, and dispose every Transaction under their particular Reigns: So the facred Books of Kings and Chronicles are written. Some write in Annals and Journals, and make a new Chapter of every Year. Some put all those Transactions together which relate to one Subject; that is, all the Affairs of one War, one League, one Confederacy, one Council, &c. tho it lasted many Years, and under many Rulers.

So in writing the Lives of Men, which is called Biography, some Authors follow the Track of their Years, and place every thing in the precise Order of Time when it occurr'd: Others throw the Temper and Character of the Persons, their private Life, their public Stations, their personal Occurrences, their domestic Conduct, their Speeches, their Books or Writings, their Siekness and Death, into so many distinct Chapters.

In Chronology some Writers make their Epochas to begin all with one Letter: So in the Book called Ductor Historicus, the Periods all begin with C; as, Creation, Cataclysm, or Deluge, Chaldean Empire, Cyrus, Christ, Constantine, &c. Some divide their Accounts of Time according to the four great Monarchies; Assyrian, Persian, Grecian and Roman. Others think it serves the Memory best to divide all their Subjects into the remarkable

markable Number of Sevens; so Prideaux has written an Introduction to History. And there is a Book of Divinity called, Fasciculus Controversiarum, by an Author of the same Name, written in the same Method, wherein every Controversy has seven Questions belonging to it; tho' the Order of Nature seems to be too much neglected by a Consinement to this septenary Number.

Those Writers and Speakers, whose chief Bufiness is to amuse or delight, to allure, terrify, or perfuade Mankind, do not confine themselves to any natural Order, but in a critical or hidden Method adapt every thing to their defigned Ends. Sometimes they omit those Things which might injure their Design, or grow tedious to their Hearers, tho' they seem to have a necessary Relation to the Point in Hand: Sometimes they add those Things which have no great Reference to the Subject, but are suited to allure or refresh the Mind and the Ear. They dilate sometimes, and flourish long upon little Incidents, and they skip over, and but lightly touch the dryer Part of their Theme. They place the first Things last, and the Lift Things first with wondrous Art, and yet so manage it as to conceal their Artifice, and lead the Senses and Passions of their Hearers in a pleasing and powerful Captivity.

It is chiefly Poefy and Oratory that require the Practice of this kind of arbitrary Method: They omit Things effential which are not beautiful, they infert little needless Circumstances, and beautiful Digressions, they invert Times and Actions, in order to place every Thing in the most affecting Light, and for this End in their Practice they neglect all logical Forms; yet a good Acquaintance with the Forms of Logic and natural Method is of admirable Use to those who would attain these

Arts

Arts in Perfection. Hereby they will be able to range their own Thoughts in such a Method and Scheme, as to take a more large and comprehenfive Survey of their Subject and Defign in all the Parts of it; and by this Means they will better judge what to chuse and what to refuse; and how to dress and manage the whole Scene before them, fo as to attain their own Ends with greater Glory and Success.

CHAP. II.

The Rules of Method, general and special.

HE Requisites of true Method in the Purfuit or Communication of Knowledge, may be all comprized under the following Heads. It must be (1.) Safe. (2.) Plain and Easy. (3.) Distinct. (4.) Full or without Defect. (5.) Short or without Superfluity. (6.) Proper to the Subject and the Design. (7.) Connected.

I. Rule. Among all the Qualifications of a good Method, there is none more necessary and important than that it should be safe and secure from Error; and to this End these four particular Directions should be observed.

1. Use great Care and Circumspection in laying the Foundations of your Discourse, or your Scheme of Thoughts upon any Subject. These Propositions which are to stand as first Principles, and on which the whole Argument depends, must be viewed on all Sides with utmost Accuracy, lest an

Error being admitted there, should diffuse itself thro' the whole Subject. See therefore that your general Definitions or Descriptions are as accurate as the Nature of the Thing will bear: See that your general Divisions and Distributions be just and exact, according to the Rules given in the first Part of Logic: See that your Axioms be sufficiently evident, so as to demand the Assent of those that examine them with due Attention. See that your first and more immediate Consequences from these Principles be well drawn; and take the same Care of all other Propositions that have a powerful and spreading Influence thro' the several Parts of your Discourse.

For want of this Care, sometimes, a large Treatise has been written by a long Deduction of Confequences from one or two doubtful Principles, which Principles have been effectually refuted in a few Lines, and thus the whole Treatise has been destroyed at once: So the largest and fairest Building sinks and tumbles to the Ground, if the Foundations and Corner-Stones of it are feeble and in-

sufficient.

2. It is a very advisable Thing that your primary and fundamental Propositions be not only evident and true, but they should be made a little familiar to the Mind by dwelling upon them before you proceed farther. By this Means you will gain so full an Acquaintance with them, that you may draw Consequences from them with much more Freedom, with greater Variety, brighter Evidence, and with a firmer Certainty, than if you have but a slight and sudden View of them.

3. As you proceed in the Connection of your Arguments, fee that your Ground be made firm in every Step. See that every Link of your Chain of Reasoning be strong and good: For if but

one Link be feeble and doubtful, the whole Chain of Arguments feels the Weakness of it, and lies exposed to every Objector, and the original Question remains undetermined.

4. Draw up all your Propositions and Arguments with so much Caution, and express your Ideas with such a just Limitation as may preclude or anticipate any Objections. Yet remember this is only to be done as far as it is possible, without too much entangling the Question, or introducing complicated Ideas, and obscuring the Sense. But if such a cautious and limited Dress of the Question should render the Ideas too much complicated, or the Sense obscure, then it is better to keep the Argument more simple, clean and easy to be understood, and afterwards mention the Objections distinctly in their full Strength, and give a distinct Answer to them.

IId RULE. Let your Method be plain and easy, so that your Hearers or Readers, as well as your self, may run thro' it without Embarassment, and may take a clear and comprehensive View of the whole Scheme. To this End the following particular Directions will be useful.

known, and most obvious, whereby the Mind may have no Difficulty or Fatigue, and proceed by regular and easy Steps to Things that are more difficult. And as far as possible, let not the Understanding, or the Proof of any of your Positions, depend on the Positions that follow, but always on those which go before. It is a Matter of Wonder that in so knowing an Age as this, there should be so many Persons offering Violence daily to this Rule, by teaching the Latin Language by a Grammar written in Latin, which Method seems to require a persect

perfect Knowledge of an unknown Tongue, in order to learn the first Rudiments of it.

2. Do not affect excessive Haste in learning or teaching any Science, nor hurry at once in the midst of it, lest you be too soon involved in several new and strange Ideas and Propositions, which cannot be well understood without a longer and closer Attention to those which go before. Such fort of Speed is but a waste of Time, and will constrain you to take many Steps backward again, if you would arrive at a regular and compleat Know-

ledge of the Subject.

Reasonings into one Sentence or Paragraph, beyond the Apprehension or Capacity of your Readers or Heavers. There are some Persons of a good Genius, and a capacious Mind, who write and speak very obscurely upon this Account; they affect a long Train of Dependences before they come to a Period; they imagine that they can never fill their Page with too much Sense; but they little think how they bury their own best Ideas in the Croud, and render them in a manner invisible and useless to the greatest Part of Mankind. Such Men may be great Scholars, yet they are but poor Teachers.

4. For the same Reason avoid too many Subdivisions. Contrive your Scheme of Thoughts in such a manner as may finish your whole Argument with as sew inferior Branchings as Reason will admit; and let them be such as are obvious and open to the Understanding, that they may come within one single View of the Mind. This will not only assist the Understanding to receive, but it will aid the Memory also to retain Truth: Whereas a Discourse cut out into a vast Multitude of gradual Subordinations, has many Inconveniences

ences in it; it gives Pain to the Mind and Memory, in surveying and retaining the Scheme of Discourse, and exposes the unskilful Hearers to mingle the superior and inferior Particulars together, it leads them into a thick Wood instead of open Day-light, and places them in a Labyrinth instead of a plain Path.

5. Give all Diligence in your younger Years to obtain a clear and easy Way of expressing your Conceptions, that your Words, as fast as you utter them, may stamp your own Ideas exactly on the Mind of the Hearer. This is a most happy Talent for the Conveyance of Truth, and an excellent Security against Mistakes and needless Controverfies.

IIId Rule. Let your Method be distinct, and without the perplexing Mixture of Things that ought to be kept separate, and this will be easily

practised by four Directions.

1. Don't bring unnecessary heterogeneous + Matter into your Discourse on any Subject; that is, don't mingle an Argument on one Subject with Matters that relate entirely to another, but just so far as is necessary to give a clearer Knowledge of the Subject in Hand. Examples in Logic may be borrowed from any of the Sciences to illustrate the Rules: But long Interpositions of natural Philofophy, of the Imagination and Passions, of the A-gency of Spirits united to Bodies, &c. break the Thread of Discourse, and perplex the Subject.

2. Let every complicated Theme or Idea be divided into its distinct single Parts, as far as the Nature of the Subject and your present Design requires it.

⁺ Things of one Kind are called homogeneous, Things of different Kinds are heterogeneous,

Tho' you must not abound in needless Subdivisions, yet something of this Work is very necessary; and it is a good Judgment alone can dictate how far to proceed in it, and when to stop.

Compound Ideas must be reduced to a simple Form in order to understand them well. You may easily master that Subject in all the Parts of it by a regular Succession, which would confound the Understanding to survey them at once. So we come to the Knowledge of a very perplexed Diagram in Geometry, or a complicated Machine in Mechanics, by having it parcell'd out to us into its several Parts and Principles, according to this,

and the foregoing Rule of Method.

3. Call every Idea, Proposition and Argument to its proper Class, and keep each Part of the Subject in its own Place. Put those things all together that belong to one Part or Property, one Consideration or View of your Subject. This will prevent needless Repetitions, and keep you from intermixing Things which are different. We must maintain this Distinction of Things and Places if we would be fafe from Error. It is Confufion that leads us into endless Mistakes, which naturally arise from a Variety of Ideas ill-joined, illforted, or ill-disposed. It is one great Use of Method, that a Multitude of Thoughts and Propofitions may be fo distinctly ranged in their proper Situations, that the Mind may not be overwhelmed with a confused Attention to them all at once, nor be distracted with their Variety, nor be tempted to unite Things which ought to be separated, nor to disjoin Things which should be united.

4. In the Partition of your Discourse into distinct Heads, take heed that your Particulars do not interfere with the General, nor with each other. Think

it not enough that you make use of distinct Expressions in each Particular, but take Care that the Ideas be distinct also. It is mere Foolery to multiply distinct Particulars in treating of *Things*, where the Difference of your Particulars lies only in *Names* and *Words*.

IVth Rule. The Method of treating a Subject should be plenary or full, so that nothing may be wanting; nothing which is necessary or proper should be omitted.

When you are called to *explain* a Subject, don't pass by, nor skip over any thing in it which is very difficult or obscure.

When you enumerate the Parts or the Properties of any Subject, do it in a complete and compre-

hensive manner.

When you are afferting or proving any Truth, fee that every doubtful or disputable Part of the

Argument be well supported and confirmed.

If you are to illustrate or argue a Point of Difficulty, be not too scanty of Words, but rather become a little copious and diffusive in your Language: Set the Truth before the Reader in several Lights, turn the various Sides of it to view, in order to give a full Idea, and firm Evidence of the Proposition.

When you are drawing up a Narrative of any Matter of Fact, fee that no important Circum-

stance be omitted.

When you propose the Solution of any Difficulty, consider all the various Cases wherein it can happen, and shew how they may be solved.

In short, let your Enumerations, your Divisions and Distributions of Things be so accurate, that

no needful Part or Idea may be left out.

This Fulness of Method does not require that every thing should be said which can be said upon any Subject; for this would make each single Science endless: But you should say every thing which is necessary to the Design in View, and which has a proper and direct Tendency to this End; always proportioning the Amplitude of your Matter, and the Fulness of your Discourse to your great Design, to the Length of your Time, to the Convenience, Delight and Profit of your Hearers.

Vth Rule. As your Method must be full without Desiciency, so it must be short, or without Superstuity. The Fulness of a Discourse enlarges our Knowledge, and the well-concerted Brevity saves our Time. In order to observe this Rule, it will be enough to point out the chief of those Superfluities or Redundancies, which some Persons are guilty of in their Discourses, with a due Caution against them.

in different Parts of your Discourse. It must be confest there are several Cases wherein a Review of the same foregoing Proposition is needful to explain or prove several of the following Positions; but let your Method be so contrived, as far as possible, that it may occasion the sewest Rehears of the same Thing; for it is not grateful to the Hearers without evident Necessity.

2. Have a Care of a tedious Prolixity, or drawing out any Part of your Discourse to an unnecessary and tiresome Length. It is much more honourable for an Instructor, an Orator, a Pleader, or a Preacher, that his Hearers should say, I was asraid he would have done, than that they should be tempted to shew Signs of Uneasiness, and long for the Conclusion.

Besides

Herb Tansie.

Besides, there is another Inconvenience in it; when you affect to amplify on the former Branches of a Discourse, you will often lay a Necessity upon yourself of contracting the latter and most useful Parts of it, and perhaps prevent yourself in the most important Part of your Design. Many a Preacher has been guilty of this Fault in former Days, nor is the present Age without some Instances of this Weakness.

3. Do not multiply Explications where there is no Difficulty, or Darkness, or Danger of Mistake. Be not fond of tracing every Word of your Theme thro' all the grammatical, the logical and metaphysical Characters and Relations of it, nor shew your critical Learning in spreading abroad the various Senses of a Word, and the various Origin of those Senses, the Etymology of Terms, the synonymous and the paronymous or kindred Names, &c. where the chief Point of Discourse does not at all require it. You would laugh at a Pedant, who professing to explain the Athanasian Creed, should acquaint you, that Athanasius is derived from a Greek Word, which signifies Immortality, and that the same Word 'Alavasia signifies also the

There are some Persons so fond of their learned Distinctions, that they will shew their Subtilty by distinguishing where there is no Difference: And the same silly Affectation will introduce Distinctions upon every Occurrence, and bring three or sour Negatives upon every Subject of Discourse; first to declare what it is not, and then what it is: Whereas such Negatives ought never to be mentioned where there is no apparent Danger of Mistake. How ridiculous would that Writer be, who, if he were speaking of the Nicene Creed, should declare negatively, 1. That he did not Mass

mean the Doctrine which the Inhabitants of Nice believed, nor, (2.) A Creed written by them, but (3.) Positively, a Creed composed by several Christian Bishops, met together in the City of Nice? The Positive is sufficient here, and the two Negatives are impertinent.

4. Be not fond of proving those Things which need no Proof, such as self-evident Propositions and Truths universally confest, or such as are entirely agreed to and granted by our Opponents. It is this vain Affectation of proving every thing that has led Geometricians to form useless and intricate Demonstrations to support some Theorems, which are sufficiently evident to the Eye by Inspection, or to the Mind by the first mention of them; and it is the same Humour that reigns sometimes in the Pulpit, and spends half the Sermon in proving some general Truth which is never disputed or doubted, and thereby robs the Auditory of more useful Entertainment.

- that they want no Proof, so there are others so e-vidently false, that they want no Refutation. It is mere trifling, and a waste of our precious Moments, to invent and raise such Objections as no Man would ever make in earnest, and that merely for the sake of answering and solving them: This breaks in notoriously upon the due Brevity of Method.
- 6. Avoid in general all learned Forms, all Trappings of Art, and Ceremonies of the Schools, where there is no need of them. It is reported concerning the late Czar of Muscovy, that when he first acquainted himself with mathematical Learning, he practised all the Rules of Circumvallation and Contravallation, at the Siege of a Town in Livonia;

Livonia; and by the Length of those Formalities

he lost the Opportunity of taking the Town.

7. Don't suffer every occasional and incidental Thought to carry you away into a long Parenthesis, and thus to stretch out your Discourse, and divert you from the Point in Hand. In the Pursuit of your Subject, if any useful Thought occur which belongs to some other Theme, note it down for the fake of your Memory on some other Paper, and lay it by in referve for its proper Place and Season: But let it not incorporate it self with your present Theme, nor draw off your Mind from your main Business, tho' it should be never fo inviting. A Man who walks directly but flowly towards his Journey's End, will arrive thither much fooner than his Neighbour, who runs into every crooked Turning which he meets, and wanders aside to gaze at every thing that strikes his Eyes by the Way, or to gather every gaudy Flower that grows by the fide of the Road.

To sum up all; There is an happy Medium to be observed in our Method, so that the Brevity may not render the Sense obscure, nor the Argument feeble, nor our Knowledge merely superficial: And on the other Hand, that the Fulness and Copiousness of our Method may not waste the Time, tire the Learner, or fill the Mind with Trifles and Impertinences.

The copious and the contracted Way of writing have each their peculiar Advantages. There is a proper Use to be made of large Paraphrases, and full, particular, and diffusive Explications and Arguments; these are fittest for those who design to be acquainted throughly with every Part of the Subject. There is also a Use of shorter Hints, Abstracts and Compendiums to instruct those who feek only a flight and general Knowledge, as well as to refresh the Memory of those who have learnt

Aa4

the Science already, and gone thro' a larger Scheme. But it is a gross Abuse of these various Methods of Instruction, when a Person has read a mere Compend or Epitome of any Science, and he vainly imagines that he understands the whole Science. So one Boy may become a Philosopher by reading over the mere dry Definitions and Divisions of Scieibler's Compendium of Peripateticism: So another may boast that he understands Anatomy, because he has seen a Skeleton; and a third profess himself a learned Divine, when he can repeat the Apostles Creed.

VIth Rule. Take care that your Method be proper to the Subject in Hand, proper to your prefent Design, as well as proper to the Age and Place

wherein you dwell.

I. Let your Method be proper to the Subject. All Sciences must not be learnt or taught in one Method. Morality and Theology, Metaphysics and Logic, will not be easily and happily reduced to a strict mathematical Method: Those who have tried have found much Inconvenience therein.

Some things have more need to be explained than to be proved; as Axioms or self-evident Propositions, and indeed all the first great Principles, the chief and most important Doctrines both of natural and revealed Religion; for when the Sense of them is clearly explained, they appear so evident in the Light of Nature or Scripture, that they want no other Proof. There are other Things that stand in need of Proof, as well as Explication, as many mathematical Theorems, and several deep Controversies in Morality and Divinity. There are yet other sorts of Subjects which want rather to be warmly imprest upon the Mind by fervent Exbortations, and stand in more need of this than they

they do either of Proof or Explication; fuch are the most general, plain and obvious Duties of Piety towards God, and Love toward Men, with a Government of all our Inclinations and Passions. Now these several Subjects ought to be treated in a different Manner and Method.

Again, There are some Subjects in the same Treatise which are more useful and necessary than others, and some Parts of a Subject which are eminently and chiefly designed by a Writer or Speaker: True Method will teach us to dwell longer upon these Themes, and to lay out more Thought and Language upon them; whereas the same Art of Method will teach us to cut short those things which are used only to introduce our main Subject, and to stand as a Scaffolding merely to aid the Structure of our Discourse. It will teach us also to content our felves with brief Hints of those Matters which are merely occasional and incidental.

2. Your Method must be adjusted by your Design; for if you treat of the same Subject with two different Views and Designs, you will find it necessary to use different Methods. Suppose the Doctrine of the facred Trinity were your Theme, and you were to read a Lecture to young Students on that Subject, or if you designed a Treatise for the Conviction of learned Men, you would pursue a very different Method from that which would be proper to regulate a practical Discourse, or a Sermon to instruct vulgar Christians merely in the pious Improvement of this Doctrine, and awaken them to their Duties which are derived thence.

In short, we must not first lay down certain and precise Rules of Method, and resolve to confine the Matter we discourse of to that particular Form and Order of Topicks; but we must well

consider

consider and study the Subject of our Discourse throughly, and take a just Survey of our present Design, and these will give sufficient Hints of the particular Form and Order in which we should handle it, provided that we are moderately skill'd in the general Laws of Method and Order.

Yet let it be noted here, that neither the Subjest or Matter of a Discourse, nor the particular Design of it, can so precisely determine the Method, as to leave no Room for Liberty and Variety. The very same Theme may be handled, and that also with the same Design, in several different Methods, among which it is hard to fay which is the belt. In writing a System of Divinity, some begin with the Scriptures, and thence deduce all other Doctrines and Duties. Some begin with the Being of God and his Attributes, so far as he is known by the Light of Nature, and then proceed to the Doctrines of Revelation. thinguish the whole Subject into the Credenda and Agenda, that is, Things to be believed, and Things to be done. Some think it best to explain the whole Christian Religion by an bistorical Detail of all the Discoveries which God has made of himfelf to this lower World, beginning at the Creation in the first Chapter of Genesis, and so proceeding onward according to the Narrative of the old and new Testament. And there are others that endeavour to include the whole of Religion under these four Heads (viz.) The Apostles Creed, the Lord's Prayer, the Ten Commandments, and the two Sucraments; tho' I cannot but think this is the least accurate of any. The same Variety may be allowed in treating other Subjects; this very Treatise of Logic is an Instance of it, whose Method differs very confiderably from any others which I have feen, as they differ also greatly from one another,

3

other, tho' feveral of them are confest to be well written.

3. Tho' a just View of our Subject and our Defign may dictate proper Rules of natural Method. yet there must be some little Deference at least paid to the Custom of the Age wherein we dwell, and to the Humour and Genius of our Readers or Hearers, which if we utterly reject and disdain, our Performances will fail of defired Success, even tho' we may have followed the just Rules of Method. I will mention but this one Instance: In the former Century it was frequent with learned Men to divide their Theme or Subject into a great Multitude of coordinate Members or Parts, they abounded also in the Forms of Logic and Distinction, and indulged numerous Ranks of Subordination. Now tho' we ought not to abandon the Rules of just Method and Division, in order to comport with the modish Writers in our Age who have renounced them, yet it is prudent to pay so much Respect to the Custom of the Age, as to use these Forms of Division with due Moderation, and not affect to multiply them in such a manner as to give an early and needless Disgust to the Generality of our present Readers. The same may be said concerning various other Methods of Conduct in the Affairs of Learning as well as the Affairs of Life, wherein we must indulge a little to Custom: And yet we must by no Means suffer ourselves so far to be imposed upon and governed by it, as to neglect those Rules of Method which are necessary for the safe, easy and compleat Enquiry into Truth, or the ready and effectual Communication of it to others.

VIIth RULE. The last Requisite of Method is, that the Parts of a Discourse should be well connected:

ed; and these three short Directions will suffice for

this Purpose.

A. Keep your main End and Design ever in view, and let all the Parts of your Discourse have a Tendency toward it, and, as far as possible, make that Tendency visible all the Way: Otherwise the Readers or Hearers will have Reason to wonder for what End this or that Particular was introduced.

2. Let the mutual Relation and Dependance of the several Branches of your Discourse be so just and evident, that every Part may naturally lead onward to the next, without any huge Chasms or Breaks zubich interrupt and deform the Scheme. The Connection of Truths should rife and appear in their successive Ranks and Order, as the several Parts of a fine Prospect ascend just behind each other, in their natural and regular Elevations and Distances, and invite the Eye to climb onward with constant Pleasure till it reach the Sky. Whatsoever horrid Beauty a Precipice or a Cataract may add to the Prospect of a Country, yet such fort of hideous and abrupt Appearances in a Scene of Reafoning are real Blemishes and not Beauties. When the Reader is passing over such a Treatise, he often finds a wide Vacancy, and makes an uneasy Stop, and knows not how to transport his Thoughts over to the next Particular, for want of some Clue or connecting Idea to lay hold of.

3. Acquaint yourself with all the proper and decent Forms of Transition from one Part of a Discourse to another, and practise them as Occasion offers. Where the Ideas, Propositions and Arguments are happily disposed, and well connected, the Truth indeed is secure; but it renders the Discourse much more agreeable, when proper and graceful Expression joins the Parts of it together in so entertain-

ing

ing a manner, that the Reader knows not how to

leave off till he hath arrived at the End.

These are the general and most important Rules of true Method; and tho' they belong chiefly to the Communication of Knowledge, yet an early and thorough Acquaintance with them will be of considerable Use toward the Pursuit and Attainment of it.

Those Persons who have never any Occasion to communicate Knowledge by Writing or by publick Discourses, may also with great Advantage peruse these Rules of Method, that they may learn to judge with Justice and Accuracy concerning the Performance of others. And besides, a good Acquaintance with Method will greatly affift every one in ranging, disposing and managing all human The particular Means or Methods for a farther Improvement of the Understanding are very various, such as, Meditation, Reading, Converfing, Disputing by Speech or by Writing, Question and Answer, &c. And in each of these Practices some special Forms may be observed, and special Rules may be given to facilitate and secure our Enquiries after Truth: But this would require a little Volume by itself, and a Treatise of Logic has always been effeem'd sufficiently compleat without it.

THE

TABLE

OF THE

CONTENTS.

HE Introduction or general Scheme Page 1

The First Part (viz.) Of Perceptions and Ideas.

CHAP. I. Of the Nature of Ideas,

8

CHAP. II. Of the Objects of Perception. Sect. 1.

Of Being in general, p. 10. Sect. 2. Of Subftances and their various Kinds, p. 11. Sect. 3.

Of Modes and their various Kinds; and first of
essential and accidental Modes, p. 16. Sect. 4.

The farther Divisions of Mode, p. 21. Sect. 5.

Of the ten Categories. Of Substance modify'd,
p. 25. Sect. 6. Of Not-Being, p. 26.

CHAP. III. Of the several sorts of Perceptions or Ideas. Sect. 1. Of sensible, spiritual, and abstracted Ideas, p. 28. Sect. 2. Of simple and complex, compound and collective Ideas, p. 33. Sect.

- Sect. 3. Of universal and particular Ideas, real and imaginary, p. 34. Sect. 4. The Division of Ideas, with Regard to their Qualities, p. 39
- CHAP. IV. Of Words and their several Divisions, together with the Advantage and Danger of them. Sect. 1. Of Words in general and their Use, p. 45. Sect. 2. Of negative and positive Terms, p. 51. Sect. 3. Of simple and complex Terms, p. 54. Sect. 4. Of Words common and proper, p. 56. Sect. 5. Of concrete and abstract Terms, p. 58. Sect. 6. Of univocal and equivocal Words, ibid. Sect. 7. Various Kinds of equivocal Words, p. 61. Sect. 8. The Origin or Causes of equivocal Words, p. 65.
- CHAP. V. General Directions relating to our Ideas, (viz.) 1. Of acquiring a Treasure of Ideas. 2. Of retaining Ideas in Memory. 3. Of scleeting useful Ideas, 4. Of the Government of our Thoughts, p.71
- CHAP. VI. Special Rules to direct our Conception of Things, p. 79. Sect. 1. Of gaining clear and distinct Ideas, p. 80. Sect. 2. Of the Definition of Words or Names, p. 82. Sect. 3. Directions concerning the Definition of Names, p. 84. Sect. 4. Of the Definition of Things, p. 100. Sect. 5. Rules of Definition of the Thing, p. 105. Sect. 6. Observations concerning the Definition of Things, p. 108. Sect. 7. Of a compleat Conception of Things, p. 117. Sect. 8. Of Division, and the Rules of it, p. 118. Sect. 9. Of a comprehensive Conception of Things, and of Abstraction, p. 124. Sect. 10. Of the extensive Conception of Things, and of Distribution, p. 128. Sect. 11. Of an orderly Conception of Things, p. 133.

p. 133. Sect. 12. These five Rules of Conception exemplify'd, p. 135. Sect. 13. An Illustration of these five Rules by Similitudes, p. 137

The Second Part (viz.) of Judgment and Proposition.

CHAP. I. Of the Nature of a Proposition, and its several Parts,
p. 144

CHAP. II. Of the various Kinds of Propositions. Sect. 1. Of universal, particular, indefinite, and singular Propositions, p. 147. Sect. 2. Of affirmative and negative Propositions, p. 156. Sect. 3. Of the Opposition and Conversion of Propositions, p. 158. Sect. 4. Of pure and modal Propositions, p. 161. Sect. 5. Of single Propositions, whether simple or complex, p. 163. Sec. 6. Of compound Propositions, p. 165. Sec. 7. Of true and false Propositions, p. 171. Sec. 8. Of certain and doubtful Propositions, of Knowledge and Opinion, p. 174. Sec. 9. Of Sense, Consciousness, Intelligence, Reason, Faith and Inspiration,

CHAP. III. The Springs of false Judgment, or the Doctrine of Prejudices, p. 186. Sec. 1. Prejudices arising from Things, p. 188. Sec. 2. Prejudices arising from Words, p. 195. Sec. 3. Prejudices arising from ourselves, p. 198. Sec. 4. Prejudices arising from other Persons, p. 214.

CHAP. IV. General Directions to assist us in judging aright, p. 231

Chap. V. Special Rules to direct us in judging of particular Objects. Sec. 1. Principles and Rules of Judgment concerning the Objects of Sense, p. 249. Sec. 2. Principles and Rules of Judgment in Matters of Reason and Speculation, p. 253. Sec. 3. Principles and Rules of Judgment in Matters of Morality and Religion, p. 259. Sec. 4. Principles and Rules of Judgment in Matters of human Prudence, p. 263. Sec. 5. Principles and Rules of Judgment in Matters of human Testimony, p. 266. Sec. 6. Principles and Rules of Judgment in Matters of divine Testimony, p. 271. Sec. 7. Principles and Rules of Judging concerning Things past, present, and to come, by the mere Use of Reason,

P. 275

The Third Part (viz.) Of Reasoning and Syllogism.

CHAP. I. Of the Nature of a Syllogism, and of the Parts of which it is composed, p. 280

CHAP. II. Of the various Kinds of Syllogisms, with particular Rules relating to them. Sec. 1. Of universal and particular Syllogisms, both negative and affirmative, p. 283. Sec. 2. Of plain, simple Syllogisms, and their Rules, p. 285. Sec. 3. Of the Moods and Figures of simple Syllogisms, p. 289. Sec. 4. Of complex Syllogisms, p. 292. Sec. 5. Of conjunctive Syllogisms, p. 296. Sec. 6. Of compound Syllogisms, p. 301. Sec. 7. Of the middle

middle Terms, of common Places or Topics, and Invention of Arguments, p. 305. Sec. 8. Of several Kinds of Arguments and Demonstrations, p. 308

CHAP. III. The Doctrine of Sophisms. Sec. 1. Of feveral Kinds of Sophisms, and their Solution, p. 313. Sec. 2. Two general Tests of true Syllogisms, and Methods of Solving all Sophisms, p. 323

CHAP. IV. Some general Rules to direct our Reafoning, p. 326

The Fourth Part (viz.) Of Method.

C'HAP. I. The Nature and Kinds of Method, p. 340

CHAP. II. General and special Rules of Method, P. 349
